Subject: WTD: Schem for GE ES-18-A Xcvr

Wanted: Schematic and xtal info for a GE 4ES18A6 commercial FM mobile transceiver (40-50 MHz).

The transmitter is a "PL 7668337 G6 Rev" strip.

The receiver is a "PL 7484534G 11 Rev A" strip.

The original power supply has been replaced with a 120 VAC unit (looks like OEM), which is straightforward enough, so P/S data is optional.

(I =think= this is vintage "pre-prog" but I have only the Vol II book of the GE Pre-Progress Line, which doesn't cover the low band units.)

Any info or leads will be much appreciated. Will gladly remit for copying and postage.

TIA,
Lee_K

<<
Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck
declind@sympatico.ca
>>

Thanks for advance notice of this important event. Personally, I find the idea of "new" vintage gear fascinating. Will the lucky buyer (who probably has paid a premium for the privilege) actually use the NOS equipment or store it away as a rare museum piece? Or will they use it once and then re-sell it?

Hey, you could have Geraldo Riveria open it on a live webcast. Or maybe promote it like the WWF, you know, "Ranger I Smackdown" and have the bidders fight over it in a wrestling ring on Pay-Per-View. Or you could have 10 people stranded on a desert island try and outlast each other for a chance at having one QSO using it. (Just call the show "Ranger").

Anyway, for those of us in the peanut gallery, I say get your side bets down. I predict the final selling price will be around $1,100.

W1GFH

976. WANTED: 1960s Raytheon CB radios and documentation

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-24 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <Cgdp5.2$jJ5.1150@bos-service2.ext.raytheon.com>
Source record: 62333
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

Greetings from Texas!

I am looking for 1960s Raytheon CB radios and handhelds for my personal collection. I'm interested mainly in complete sets that are in good condition and electrically restorable, but I will consider "beaters", "fixer-uppers" and "parts rigs" also. I already own examples of the TWR-1, TWR-2, TWR-4, TWR-5, and TWR-7, so I'm not really looking for any more of those models (unless I get 'em really cheap, in outstanding shape, or both).

Tube-type Raytheon sets were made by the company's Apelco division in S. San Francisco, CA. I may be interested in some of the similar looking and electrically identical Apelco CB models. Certain Sears (Allstate) and Webster CB radios were made by Apelco, and they would be good parts sources for my Raytheon restorations. For several years, Raytheon also owned SBE, and at least two of the later Raytheon CB models were made by the SBE division.

I am also looking for any kind of written documentation that pertains to Raytheon CB equipment, including owner and service manuals, advertising, spec sheets, dealer catalogs, copies of ads and articles from magazines, and so forth. In addition, I'd LOVE to hear from anyone who worked for Raytheon, Apelco, or dealers who sold or serviced Raytheon and Apelco CB radios. I've already been contacted by a number of folks who've given me bits and pieces of information, and I really appreciate it!

Visit my Raytheon CB radio web site at this URL:

http://www.qsl.net/k5dh/raytheon.html

I have some interesting historical tidbits posted, along with pictures, advertising, and so on.

In addition to running my own Raytheon CB web site, I have been working with volunteers at the Raytheon company archives up in Massachusetts, helping them document the product line (which did not previously exist in the archives in any way!).

Thanks and 73,
Dean, K5DH

Factory wired, unused? I'd bet closer to $2,500. Especially if the
computer photos are in focus :-)

Subject: *** New photos on BA web site ***

Okay folks,

I've been working on the boatanchor section of my web page and have added a bunch of new photos. It's URL is:

http://www.mindspring.com/~cacutts/radio/ba/ba.html

I wanted to get this done before Shelby, now that it's complete I can get back to my RBC-4 instead of html and jpg files!!

Enjoy,

Allen Cutts

Subject: A good vacum tube receiver?

I'm wondering what would be a good performing boat anchor receiver for SWL(other than the R-390) that's also able to hear SSB?

The only tube receiver I ever owned was a Hammurland HQ-110, and I loved it but it needed a lot of work so I got rid of it.

Would like to hear comments from some of you more experienced folks out there,

Thanks,

Gil

Subject: FA : in october -still new ranger1 factory wired

<<
Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck
declind@sympatico.ca
>>

Thanks for advance notice of this important event. Personally, I find the idea of "new" vintage gear fascinating. Will the lucky buyer (who probably has paid a premium for the privilege) actually use the NOS equipment or store it away as a rare museum piece? Or will they use it once and then re-sell it?

Hey, you could have Geraldo Riveria open it on a live webcast. Or maybe promote it like the WWF, you know, "Ranger I Smackdown" and have the bidders fight over it in a wrestling ring on Pay-Per-View. Or you could have 10 people stranded on a desert island try and outlast each other for a chance at having one QSO using it. (Just call the show "Ranger").

Anyway, for those of us in the peanut gallery, I say get your side bets down. I predict the final selling price will be around $1,100.

Factory wired, unused? I'd bet closer to $2,500. Especially if the computer photos are in focus :-)

Subject: Vintage-Radio e-mail Reflector

This list will prove beneficial to anyone who is interested in the
collection,
restoration, and operation of vintage radio equipment. While this list will
deal mainly with American-made amateur radio receivers and transmitters,
other makes are welcome so long as they fit the category of "vintage". To
qualify for vintage status a set must be 25 years old and preferably
contain some vacuum tubes. This category can include military, home
broadcast sets, commercial equipment and homebrew equipment. Any homebrew
equipment using vacuum tubes and operating CW or AM will be considered
"vintage" equipment no matter what the age. Accessories such as keys,
antenna tuners, watt meters, test equipment, etc. is also considered a part
of the Vintage hobby and will be welcome if it is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts. With
your help we can make this a great List.

Please do NOT subscribe using a forwarding e-mail account (e.g. qsl.net;
arrl.net). Please use your actual, non-forwarding address only.

To subscribe, send e-mail as follows:

> unassembled HW9 with accesories went for on ENAY recently?

Now that would have been a *true* (and very rare) collectors item, which is what drove up the price..

A Ham who used to live about 30 miles from here had just about, if not every, example of heathkits. He not only had the radio stuff, but computers and TVs. Now, there would have been an estate sale.

The Hallicrafters SX-115s were going out of sight and currently much of the Hallicrafters stuff is somewhat above market, *but* it's coming back down. They are now running less than half what they did a week ago. A month ago they were in the market value range.

There was an FPM 200 on there which is a true antique and very rare. Not a very good radio, but rare. Although it went for as much as my *new* station it was probably about right.

So maybe they will get back down to where I can put together an operating station. Actually I do have an HT32A and an HT32B, but they need some cleaning. They do work though<G>

I'd like to get the whole Halliscratchers line eventually, but not all at once. For what they weight, I couldn't afford that much equipment by the pound<G>

I just purchased a nice SX101A for $100 locally and there are two of them (also nice) on e-bay at $225 with a couple of days to go. Even for very clean ones that is a little above market.

It's possible there is a sudden increase in collecting the stuff, or some other reason the prices spiked.

> You could, on the
> same day, have bought a 1200 watt amp, an HF rig, and an all mode 2M rig all
> together for the price of that HW9.

Yah, but in the case of a Heathkit collector that thing was gold, or more so.
A genuine "Original" *untouched* kit.

Collecting is funnny business. If you bought one of the "Centennial Winchester Rifles" in 1976, the box alone is now worth quite a few hundred dollars (It can be worth more than the original price of the rifle). A calendar that Winchester gave away, with the "Declaration of Independence" on the cover is quite valuable now.

Radios? I guess the old saying that "One man's junk is another's treasure". really holds true<LOL> Cuz there is an afful lot of junk out there and buying the old boat anchors has to be love, as the best of them don't hold a candle to todays high quality rigs.

One thing the old rigs do well that todays don't is "heat the shack". <:-))

The difficult thing is to know market value and then not get pushed above that.

Even then there will be those who want a specific piece and no one is going to outbid them reguardless of market value. While others can just get caught up in the bidding with the "Just a *little* more might get it thought.

It only takes one or two items from a group that go way over market to bring the rest up a bit, but things *usually* return to more or less normal within a few weeks, or months.

Depends on the reason why it went up and with any auction there can be many reasons. Some of them not good.

Was a time when stuff like that sat on Thrift store shelves for weeks but not any more. Never see it now. A lot of the stores' back room boys have taken out commissions from the ebay sellers and the stuff never gets out front. Ah well...

<< Any one else notice that some lines of equipment are running 3 to 5 times book price on e-bay lately? >>

Viking I going for $1000 right now on eBay. I mean, sure, it's been nicely repainted. Is it worth a grand, tho?

Ranger I's above $400. Matchboxes going up to $400. It's nuts.

You're right about the absurdly high prices on E-Bay, but there is no such thing as a "book price" on used ham radio equipment. it's worth as much as at least one buyer is willing to pay. I may think it's foolish for somebody to pay $400 for a Viking Ranger, but I guess some people get caught up in the excitement of an auction--even one on line--and go overboard on what they're willing to spend. Also, there's a lot of spare cash around these days.

Guys, all of the complaints about eBay should be tempered with some reason and logic.

1. The seller .. The seller wants to get as much as he can for his item (whatever it is) and sell it as quickly as possible. I don't think there is any argument here!

2. The Buyer .. The buyer want neat stuff as cheap as possible. There can be no arguments here!

The problem is that there are prospective buyers that think they should be able to buy whatever they want at a price that they think is fair! W R O N G !! The friggin market dictates the price and those who pay get and those who want to complain about it come here!

I have been around this newsgroup for 6 years and bought and sold a lot of gear. We have all had to put up with the damn whining "price police" like Donnie, who gave people a hard time and hassled people until they got sick of it and left for a better forum. There are those guys who would see a fair price on an item and call up with an insulting offer. They drove people to another forum too.

I just advertised a Kenwood TS-940S (20 million serial number) here for $850 and got many insulting offers. One guy emailed me and his text read "final offer $550 and you pay shipping". I got phone calls telling me how unfair my asking price was and they would give me XX and if I was a reasonable person I'd see it their way.

Well I didn't! I put it on eBay and in the first 8 hours I had over 80 people look at it. In 6 days of auction I had a total of over 900 people view it. One gentleman wanted it real bad and called me and asked me what I was looking to get. I told him $850 plus shipping .. he PayPaled the funds immediately .. he got the radio .. I got my $850 .. and not once did I have to put up with the bull that I did by posting it here!

So all you whiners out there and you "price police" that ruined this group .. go ahead and complain. Fact is .. Ebay rules for both seller (who gets a fair market price and no bullshit) and the buyer (who might pay a little more but gets protection from fraud, credit card convenience, knowledge about the integrity of the seller, huge selection of great goods with pictures, etc, etc, etc.). Or you could sit here and whine a little more!!

Larry:

I'm inclined to agree with you here. Personally, I like to buy & sell
within the newsgroups, however, for the same reasons you've pointed out,
I've been driven to go the Ebay route. I try to be fair at all times. What
I started doing is initially posting items in the newsgroups, for sale, with
a mention that if it doesn't sell within a specified time frame, I will post
it on Ebay. This way, someone in the newsgroup who is serious, will usually
respond. If I don't get my asking price, or something "reasonably" close,
then it goes to Ebay. Without exception, Ebay has always netted me a better
price, then I was asking in the newsgroups. This is not a bad thing! I
don't force anyone to bid at all, let alone a higher price than I was

willing to settle for. They simply paid what they were willing to pay, for an item they wanted. I think this results from reaching a MUCH larger audience! You would be surprised the number of people who know nothing about newsgroups!

I think if newsgroup buyers want to see postings return to the newsgroups, they need to be serious, and reasonable. I've posted items here that were worth much more than my asking price, and someone will inevitably come back with an offer of sometimes hundreds of dollars less! Or they don't want to pay shipping, etc.

It's only logical that if a person is selling an item, and they agree to pay the shipping charges, then they have already thought out, and included those shipping charges in the price of the item. I choose to break them out separately, in case someone locally responds to the ad, and can pick it up, then they obviously don't have to pay shipping.

So what is the big attraction to Ebay? Clean, and green transactions!

eBay is a "textbook" free market system stripped down to the bare minimum.
What could be better! The fair market value of a piece of equipment is
whatever someone is willing to pay. I with you Roger.

There are those who swear by e-bay and those who swear at it.

Read my follow-up post to the original.
Then pay attention to what I wrote.
I only asked if any one else had noticed the prices going up. Nothing more
and no insinuations.

Your original point is well taken. The TCS rig that went for about $1200 is an
example. Perhaps ebay is setting the pace, but its on-line only! Ebay prices

are laughed at at all the fests in the DC area and, I might ad, equipment sells at what one might call slightly more reasonable prices. Maybe its because when the gear is up front and personal, where you can see it, the fantasy wears thin, quickly.

Yah mean you can see the scratches and dents along with the rust and smell
the cigarette smoke up close and personal
<LOL>

Where or where is my old KWS-1/75A4 combination. It was big, noisy and
I didn't have to turn on the heat when it was running.
It also took darn near a year before it quit smelling like an ash tray.
Either that, or my sinuses were shot.

I could run both my current rigs plus the Henry and it still wouldn't get
that warm. <:-))

But just wait. by some time this winter I plan on having seperate stations
for HF, VHF, and UHF all capable of the legal limit...Unfortunately I think
the legal limit on 450 here in Michigan is still 50 watts.

Only one more section to go on the Rohn 45 and it'll be up. Then I start
with the antennas.

Subject: Lavoie Labs WWV Comparator manual needed

Hello. Thanks for looking at this. Today, I picked up a Lavoie Labs Model LA800D WWV Comparator. It is an interesting piece of equipment probably made in the sixties that has an internal oscillator that is locked on to WWV to produce a precise 10 MHz output. I'd really like to have a manual for this. I would be glad to pay copying expenses and postage.

Thanks
John

=======
Hi Dave -- AVC is Automatic Volume Control -- when the incoming signal is
strong -- AVC cuts back on the receiver gain and vice versa. AVC tends to
keep a constant volume regardless signal fading.

MVC is Manual Volume Control where the receiver gain is controlled by the RF
GAIN knob (If you have one) -- otherwise the receiver is in a full gain
configuration.

Here is how one receiver AVC works:
AUTOMATIC VOLUME CONTROL - Delayed, amplified AVC gives constant output
within 6 db for a change in r-f

input from 5 microvolts to 0.5 volt. AVC is applied to the r-f stages and
three i-f stages. The proper amount of AVC delay is employed for maximum
sensitivity on weak signals.

Subject: What is it?

On many old steel radio chassis there is a gold coating.
The military stuff had a fungicide that looked similar, but was much
thicker. This stuff looks more like anodizing, but it's on steel.

Any one know what it is and where it can be found.

I'm assuming that you are not looking for perfection, so virtually any of the old receivers that had a Beat Frequency Oscillator (BFO) for copying CW will do a creditable job of copying SSB. It just takes getting used to tunning both the VFO and BFO when you change from one side band to the other.

I used an old Hallicrafters S40B with a Heathkit Q multiplier and was able to copy SSB. .

Before I dig into this beast's modulator/speech amp can anyone share their experience with widening the audio response? My plan is to do an audio response curve then use it a s a reference for my modifications. Most obvious are the .001 mfd coupling caps between audio stages. .001? Seems a bit small. Thanks in advance for your comments.

1008. Question: Collins Mechanical Filters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-25 00:00:00 UTC
From: Jeramy Thibodeaux <kg4azt@mindspring.com>
Message-ID: <8o6cbi$2me$1@nntp9.atl.mindspring.net>
Source record: 62366

I have a few used Collins Mechanical Filters that I would like to possibly use in future projects.

Can someone point me to where I can find as much information as possible on these filters. I would like to know things like pinouts, how to install them in the circuit, and are there any special considerations I need to be aware of?

I would also like to know if they can be tested outside of the circuit?

Type: F 250 A 85

The Hammarlund HQ-180( ) is a nice one, although I don't like the audio, at all. Any of the general coverage HQ-series would do nicely, from the HQ-140, 145, 150, and the 160 (The 170 is ham bands only). Any of the Hallicrafters will do OK, too.. such as the S-85, SX-99, and the SX-100. One has to watch the prices, however, especially on Ebay. I would recommend going to a hamfest so you can see and touch what you're buying (and hopefully get to smoke test it). There are many many more very good receivers, but all too many are fetching high prices these days. Look around and bide your time..the right one will pop up in good time!!

Cross-posted to:
rec.radio.amateur.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi all,

I have reproduced the diode boards for the Classic Collins 30L-1. If you have a 30L-1 and it has the original 1N1492 top hat diodes in it, you probably need one of these boards. Out of the seven amps I checked out, five of them had at least two shorted diodes. These new boards are just like the original in that all components are placed just where they are on the original. This board is extremely high quality and will live up to the Collins standards. All components are either NOS or NEW. The 16 rectifier diodes have been upgraded to new 1N5408's (3 Amp, 1000 volt PIV) made either by Motorola (now ON Semiconductor), or by Vishay. The 16 ceramic capacitors are 1KV ceramic disks made in the USA by Sprague. The 1500 Ohm resistor is a genuine Carbon Composition 2W 5% Allen Bradley! The 4 Meg 2W, 1% metal film resistor is a genuine Dale, and the 1 Ohm 5W 1% is either a Dale or Pacific NOS mil spec resistor or when these run out, it will be a New Ohmite brand. All assembly is being done by a NASA certified solderer. I have used the best components I could buy and hired the best assembler I could find. I wanted this board to be truely Collins Quality. A photo (not a very good one however) can be seen at http://members.aol.com/dw130/diode1.jpg If you would like to place an order for one or more of these boards they are $79.00 each + $4.50 total shipping in US (no matter how many boards you order). If overseas, shipping will be actual cost. Please send to:

There are still a very few disgruntled old farts
who want to tell everyone what they can and can't post.
You are perfectly welcome to post an FA here
as long as it's marked as an "FA."
Simply ignore the illogical, envy-driven whining and pewling
of the sour-grapes gang;
they are dying out as the 21st century
consigns them and their like to the ash heap of history,
along with people who cussed the motor car and the airplane.
Kind Regards,
Dave S.

Chuck, they're a million folks selling tubes, still. Just search on vacuum tubes+radio, etc. One does have to shop for the best price, however. Stories of the demise of tubes has been much exaggerated!!!

I'm assuming that you are not looking for perfection, so virtually any of
the old receivers that had a Beat Frequency Oscillator (BFO) for copying CW
will do a creditable job of copying SSB. It just takes getting used to
tunning both the VFO and BFO when you change from one side band to the
other.

I used an old Hallicrafters S40B with a Heathkit Q multiplier and was able
to copy SSB. .

Subject: A good vacum tube receiver?

The Hammarlund HQ-180( ) is a nice one, although I don't like the audio, at all. Any of the general coverage HQ-series would do nicely, from the HQ-140, 145, 150, and the 160 (The 170 is ham bands only). Any of the Hallicrafters will do OK, too.. such as the S-85, SX-99, and the SX-100. One has to watch the prices, however, especially on Ebay. I would recommend going to a hamfest so you can see and touch what you're buying (and hopefully get to smoke test it). There are many many more very good receivers, but all too many are fetching high prices these days. Look around and bide your time..the right one will pop up in good time!!

To properly demodulate SSB a product detector and not a BFO is much
more desirable. Stability is also a good assit.

You didn't mention if your wanting general coverage or ham bands only.
For Ham only, the SX-111 Hallicrafters was a decent receiver. Had
selectable filters and a product detector.

In the Hammarlund the HQ-180 is a general coverage jobber.

And the HQ-150 has a Q-multiplier that can be used as a remarkable noise
filter for SSB.

Subject: CQ AM'ers B&W 5100 mod info?

Before I dig into this beast's modulator/speech amp can anyone share their experience with widening the audio response? My plan is to do an audio response curve then use it a s a reference for my modifications. Most obvious are the .001 mfd coupling caps between audio stages. .001? Seems a bit small. Thanks in advance for your comments.

From: "Jeramy Thibodeaux" <kg4azt@mindspring.com>
Subject: Question: Collins Mechanical Filters

I have a few used Collins Mechanical Filters that I would like to possibly use in future projects.

Can someone point me to where I can find as much information as possible on these filters. I would like to know things like pinouts, how to install them in the circuit, and are there any special considerations I need to be aware of?

I would also like to know if they can be tested outside of the circuit?

Type: F 250 A 85
P/N 526 9049 009

Type: F 250 Z 4
P/N 526 9130 021

Type: F 300 Z 5
P/N 526 9311 00

Type: F 300 Z 4
P/N 526 9312 00

Type: F 500 Z 11 LSB
P/N 526 9419 00 6627

Type: F 500 Z 10 USB
P/N 526 9420 00 6833

Any and all help will be greatly appreciated.

From: "KGL-900"
Subject: Astor Stereogram

Does anyone know of the following StereoGram:

Make: Astor
Model: Unknown (Possibly G18AA)
Made: 1968

The problem:

No ouput, from any of the inputs (gram, din, tv, radio)
(Although there is noise (like pink noise) coming from the left channel

amp)
The right channel amp is not producing anything.

I have been through and re-soldered all the joints, still no luck.
Does anyone have any idea what they fault may be?

Thanks;
Stew

Subject: BA Parts and Tubes - 8/20/00 List

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Power Transformers (all have 117 V 50-60 Hz primary)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $10 each or both for $18. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Filter Chokes

Stancor RC-8300 filter choke. Upright mounting style, potted in drawn metal case. 8 Henries @ 300 mA DC. 60 ohms DC resistance. Insulation test 3500 V.

Used, good to very good condition. Tested with VOM. Price $20 (15 lbs.)

Stancor C-2686 filter chokes. (Have 2). Upright open frame type. 25 millihenries @ 4A DC. .425 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Stancor C-2688 filter choke. Upright open frame type. 10 millihenries @ 12.5A DC. .11 ohms DC resistance. Insulation test 1500 V. NOS in original box, dusty but unused. Tested with VOM. Price $3 (5 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

V-70-D/812H Transmitting Tubes (have 2) - Made by United Electronics. These are a "super" 812 - 85 watts plate dissipation, ceramic/metal base and plate cap, tubular hard glass envelope, graphite anode. Test GOOD on Hickock 6000A tester. In original plain white boxes. Not sure if these are new or used, but look and test good. Price $22 for the pair. (3 lbs).

Receiving tubes - NOS ones are in original boxes. All used tubes tested and good on Hickok 6000A tester. NOS tested at your request. Listed by type, condition, quantity, brand, price each, special notes.

5U4G, NOS, 1, JAN, $2
6AQ7GT, used, 1, Tung-Sol, $0.50 (in Tung Sol box)
6AU5GT, NOS, 5, Sylvania, $1.50 ("disc" base)
6AV5GA, NOS, 1, GE, $1.50
6B8/VT-93, NOS, 3, JAN, $2
6B8G, used, 1, RCA, $1
6BL7GTA, NOS, 1, GE, $1
6BX7GT, NOS, 1, Rad-Tel, $1 (in "Standard Brands" box)
6CD6GA, used, 2,GE, $1
6G6G, NOS, 1, Sylvania, $1.50 (box is dirty but tube is NOS)
6L6, used, 1, RCA, $2 (looks really good, tests like new, but has broken key and no box)
6SA7, NOS, 1, Philco, $2 (in purple and yellow Philco box)
6SA7GT, NOS, 1, RCA, $1.50, (in plain military box)
6SQ7, NOS, 2, Hytron, $1.50
6SQ7GT, NOS, 6, Raytheon, $1.50
6V6Y, NOS, 1, RCA, $2, (Metal tube with low-loss micanol base for RF use)
6080, NOS, 1, RCA $1.50, (in plain white box)
6080, used, 1, RCA, $0.50
6080, used, 1, GE, $0.50

Note: The above is just a small sample of the tubes available. Please email your needs - I may have what you need.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Free for the postage. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

8/20/00

Subject: CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-

I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.

Subject: e-bay prices

Duh. If you don't like the prices at that e-boutique, don't shop there :-)

Minutes after I arrived at the Seattle swap meet this morning, I passed by a lady with a gorgeous Hallicrafters SX-28 with matching speaker in the back of her truck. She had already sold the pair to the first asker for $200 -- a bargain in my book. I wept silently, then passed on :-)

Now, as always, the best deals go to those who do the legwork. Some lucky guy got there before me. No problem -- there's another good deal around the corner, in my experience.

If your idea of legwork is sitting in your Barcalounger tapping on your laptop, then you can count on paying a premium for that convenience. No problem -- just consider it your e-tax.

Cheers.

Phil

From: w4pqwhs@aol.com (W4pqw HS)
Subject: Switch Question

The switch you mention is (automatic volume control) and(manual volume control).. you may find that cw signals are more easily controlled in mvc position, broadcast and other am will be fine on avc setting.. may be Kenwood is a spin off from Lafayette , I heard about Lafayette long beforeI heard of Kenwood.. have fun Harold W4PQW

Date: Sat, 12 Aug 2000 20:35:35 -0700
From: no@sp.am
Subject: Switch Question

MVC = Manual Volume Control
AVC = Automatic Volume Control

For voice/music, etc. AVC is probably best. It will tend to keep the gain of the receiver such that the signal will remain fairly constant with fading, etc. You can usually run the RF gain control up full and adjust the volume by using the AF gain control for comfortable volume if you have the AVC on.

For CW (code) or for SSB the usual process is to use MVC and turn the AF gain 1/2 to 3/4 of the way up (or more) depending on how much hum is produced and start with the RF gain all the way down and advance it until you can hear the signal you're trying to tune in. Of course for both CW and SSB you need to have the BFO (Beat Frequency Oscillator) turned on and adjust its pitch while you rock the tuning back and forth to give the strongest signal and a pleasant tone on CW and to make the voice as clear as you can on SSB. Using MVC you provide the gain control by riding the RF gain control. Once you've decided where you want the AF gain control, make adjustments in how loud the signal is by adjusting the RF gain and keeping the signal low enough so that it's not distorted.

If you try to read CW or SSB with the AVC on, since you must have the BFO on to introduce a beat signal for CW or to reinsert the missing carrier on SSB, the BFO signal will cause the AVC to decrease sensitivity to the point where you usually won't be able to hear the desired signal. More modern receivers will have a product detector which can operate with the RF gain full on on both CW and SSB.

No, Lafayette was a private label of (guess what?) Lafayette Radio and may have had Trio-Kenwood produce something for them but Kenwood is definitely NOT a derivative of Lafayette. Lafayette did not design and produce gear but put their label on other company's products.

Subject: Time for a R-390 Postsge Stamp?

I recently found this on E-Bay; apparently certain cash-hungry governments (including our own) will put just about ANYTHING on a postage stamp if it'll bring in cash (Disney characters, Daffy Duck, movie stars, etc, etc). So this might not be as hard as it first seems!

Turkemenistan even had Kim Basinger on a SERIES of stamps (not just one) (see Ebay
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=409392676).

Maybe we could convince somebody to honor the R-389, R-390, R-390A, R-391 and R-392 in a similar series; I suspect that in terms of long-term significance that these boat anchors outweigh Kim in importance (pun intended).
Any suggestions of other radios?
Maybe we should team up with the HCA and get a stamp for the SX-88; or how about the GPR-90?

I just viewed a tape of the latest James Bond film, "The World is Not
Enough".
It has scene where at a British Intellegance listening post where they are
intercepting a beacon in Istanbul, Turkey.

I believe the receivers used are Racal RA-17 or RA-117. Does anyone agree
or does anyone have any other information on the receiver model.?

I also believe the same model receivers were used in the listening post
scene
the the first Bond film, "Dr. No".

By the way, I feel "Dr. No" is a much better film than "The World is Not
Enough".

Thanks in Advance

Mike, N2MS

I think you're right, they are RA-17's.
Also, I believe in "Diamonds are Forever", Blofeld (sp?) had a Philips L6X38T large 'transoceanic' style transistor portable on his desk.
Finally, I remember in one of the movies where Bond was on an oil rig (I think), one of the receivers in the radio room was a Panasonic RF4900.

It's sick to pay attention to the radios when you should be staring at the T&A, isn't it?

1048. T-13, T-363A schematic and conn. wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-26 00:00:00 UTC
From: j.m.franke@larc.nasa.gov
Message-ID: <j.m.franke-2608001436320001@franke.larc.nasa.gov>
Source record: 62266

Looking for the schematic, manual, and connectors for the compact, 144 MHz, 2 Watt, VHF, AM transmitters. The T-13 uses four 6AQ5 tubes and the T-363A uses four 5763 tubes. They use 6 or 8 MHz crystals and double in the final stage. I have one of each and want to modify them both for satellite or APRS applications.

Thanks,

John WA4WDL

I have that same problem, (although there is ample time to look at both). At least the bond movies make a reasonable attempt to display accurate equipment...some movies will try to pass off a stack of CB's or even non-radio stuff as a complex monitoring post (not that I'm knocking CB, radio is radio).

What you have there John, is part of the Aircraft Radio Corp. (ARC) "Type 12" equipment. I have all the books and stuff for that equipment. If you'll send me an appropriate large SASE, I'll copy the schematics and installation wiring diagrams for you. FYI, the primary military manual for the series is TM 11-525-25. This manual may be availabe on the market. The factory manuals are the tough ones. With regard to connectors, I regret that I can't let any go, as this time.

I'm afraid I have plead guilty as well.

The hero or heroine is 'homing in' on the villain by carefully turning a dial and you suddenly realize they are twiddling the front of a BC221 Frequency Meter! Kind of spoils it for me. I do recall the stage show of South Pacific, in London, back in the 1950s had a realistic looking radio set up that swung out onto the stage at the appropriate moment; it definitely included an HRO receiver, but I couldn't tell the model from the balcony!

About 30 years ago visited one of those NORAD (North American Air Defence) holes in the ground centres at North Bay Canada..
While there we (a group of telecommunications managers) were advised that certain 'old' (circa 1950s etc.) equipment was being replaced by more modern equipment; in particular some computer racks, full of tubes/valves and some big screen radar plotter monitors.
When we asked what they would do with such 'old style' equipment the answer was immediate.
"Oh; no problem. Film studios will always take this old stuff for 'space' and sci-fi movies!".
So space movie buffs; be alert! "OK; Boat Anchors to Enterprise. Beam this up."

Terry S.

Hello to all!
I have two (2),full output....1900 and 1800 watts output with 110 watts input on 75m....Pulse rated 4PR1000A tubes for sale. One is a Penta Labs and one is a Eimac. Both have nice,clear glass. The Eimac's letterig rubbed off when I cleaned it. Other then that,it is fine.
These are spares I had for a "home brew" amp that I have sold.
I am asking $75.00 apiece plus cost of boxes (two for double boxing) and shipping from 96007 (Anderson Calif.).
If you have any questions,please feel free to email me.

Have a nice day and 73 de Sherry.

Used to work on that stuff. Yeah man. 9001 front ends, crank tuning. We might see one of those in the morning and an ARC-73 in the afternoon. The transmitter was right out of the ARRL pubs, though.

Nowadays the stuff we sweated over is UNDER the tables at flea markets. Sic transit gloria -- and a good thing, too.

Date: 2000-08-26 00:00:00 UTC
From: Rob Dunn <dunnr@ix.netcom.com>
Message-ID: <8oa784beg1@slb6.atl.mindspring.net>
Source record: 62280

Hi All,

I have radio I am working on with small, enclosed, switched phone jacks that are full of green corrosion that is resulting in bad connections across the switch contacts. The jacks are enclosed and cannot be disassembled and there is too much crud in there for Deoxidit 5 to take care of. Anybody know of a chemical bath I can immerse these jacks in to desolve the corrossion? I have removed them from the radio so immersion is possible.

Thanks,

Rob

To properly demodulate SSB a product detector and not a BFO is much
more desirable. Stability is also a good assit.

You didn't mention if your wanting general coverage or ham bands only.
For Ham only, the SX-111 Hallicrafters was a decent receiver. Had
selectable filters and a product detector.

In the Hammarlund the HQ-180 is a general coverage jobber.

He has the dates correct. In fact, some even arrive before Wednesday.
By Thursday many of the bargains are gone.

Think of it as sort of the "Woodstock" of ham radio. Woodstock... as in
New York.

It's not just a hamfest, it's a "happening".

You really should go. You won't be disappointed.

73,
David - W4SSE

Hi Brian,
The HQ-180 does have a product detector; that is one of the
reasons that I wanted that receiver, when I was younger. A great receiver!

From: "Rob Dunn" <dunnr@ix.netcom.com>
Subject: Desolving Corrosion

Hi All,

I have radio I am working on with small, enclosed, switched phone jacks that
are full of green corrosion that is resulting in bad connections across the
switch contacts. The jacks are enclosed and cannot be disassembled and
there is too much crud in there for Deoxidit 5 to take care of. Anybody
know of a chemical bath I can immerse these jacks in to desolve the
corrossion? I have removed them from the radio so immersion is possible.

Thanks,

Rob

Date: Sun, 27 Aug 2000 00:30:53 GMT
From: w1ksz@tiac.net
Subject: FS: VHF/UHF Converters (Sad Cases)

I picked up ("rescued") two converters that some FC has removed the tubes and LO Xtals from (almost).
First, Tapetone XC - 144, 28-30 MHz IF. The FC didn't realize that the LO tube and one LO Xtal are inside, so those are there, but the other tubes (including 417A RF Amp) are missing.

The second one is a Centimeg 432 converter, looks like 10 mtr IF.
No tubes or LO Xtal.
Both are very clean inside, the FC didn't know how to open them up

I guess !!
Interesting pieces from the 60's hey-day of VHF/UHF activity.
I'll pack and ship both for $24 to anyone in CONUS.

From: "Michael St. Angelo" <mstangelo@worldnet.att.net>
Subject: Radio in James Bond Movies

I just viewed a tape of the latest James Bond film, "The World is Not
Enough".
It has scene where at a British Intellegance listening post where they are
intercepting a beacon in Istanbul, Turkey.

I believe the receivers used are Racal RA-17 or RA-117. Does anyone agree
or does anyone have any other information on the receiver model.?

I also believe the same model receivers were used in the listening post
scene
the the first Bond film, "Dr. No".

By the way, I feel "Dr. No" is a much better film than "The World is Not
Enough".

Thanks in Advance

Subject: Radio in James Bond Movies

I think you're right, they are RA-17's.
Also, I believe in "Diamonds are Forever", Blofeld (sp?) had a Philips
L6X38T large 'transoceanic' style transistor portable on his desk.
Finally, I remember in one of the movies where Bond was on an oil rig (I
think), one of the receivers in the radio room was a Panasonic RF4900.

It's sick to pay attention to the radios when you should be staring at the
T&A, isn't it?

John

I have that same problem, (although there is ample time to look at both). At least the bond movies make a reasonable attempt to display accurate equipment...some movies will try to pass off a stack of CB's or even non-radio stuff as a complex monitoring post (not that I'm knocking CB, radio is radio).

I'm afraid I have plead guilty as well.

The hero or heroine is 'homing in' on the villain by carefully turning a dial and you suddenly realize they are twiddling the front of a BC221 Frequency Meter! Kind of spoils it for me. I do recall the stage show of South Pacific, in London, back in the 1950s had a realistic looking radio set up that swung out onto the stage at the appropriate moment; it definitely included an HRO receiver, but I couldn't tell the model from the balcony!

About 30 years ago visited one of those NORAD (North American Air Defence) holes in the ground centres at North Bay Canada..

While there we (a group of telecommunications managers) were advised that certain 'old' (circa 1950s etc.) equipment was being replaced by more modern equipment; in particular some computer racks, full of tubes/valves and some big screen radar plotter monitors.
When we asked what they would do with such 'old style' equipment the answer was immediate.
"Oh; no problem. Film studios will always take this old stuff for 'space' and sci-fi movies!".
So space movie buffs; be alert! "OK; Boat Anchors to Enterprise. Beam this up."

In the 70s, on Hawaii 5-0, McGarrett was forever talking into his personal police radio during chases, or key moments in a sting, or when the Governor called to check in with the latest interference du jour. I was somewhat less than amused to see him talking into a Shure 527B noise cancelling microphone run into a Masterwork AM/FM/Shortwave portable T/O clone.

Yes, it was more than a bit distracting.

I traded a 1956 Collins 212F Broadcast console to my equipment
supplier in exchange for some processing hardware. He called me and
told me it had been sold...to Hollywood. I was amused to see it in
Howard Stern's movie.

And then realized that my equipment had gone farther in my career
than I had.

Subject: T-13, T-363A schematic and conn. wanted

Looking for the schematic, manual, and connectors for the compact, 144
MHz, 2 Watt, VHF, AM transmitters. The T-13 uses four 6AQ5 tubes and the
T-363A uses four 5763 tubes. They use 6 or 8 MHz crystals and double in
the final stage. I have one of each and want to modify them both for
satellite or APRS applications.

Thanks,

John WA4WDL

What you have there John, is part of the Aircraft Radio Corp. (ARC) "Type 12" equipment. I have all the books and stuff for that equipment. If you'll send me an appropriate large SASE, I'll copy the schematics and installation wiring diagrams for you. FYI, the primary military manual for the series is TM 11-525-25. This manual may be availabe on the market. The factory manuals are the tough ones. With regard to connectors, I regret that I can't let any go, as this time.

Used to work on that stuff. Yeah man. 9001 front ends, crank tuning. We might see one of those in the morning and an ARC-73 in the afternoon. The transmitter was right out of the ARRL pubs, though.

Nowadays the stuff we sweated over is UNDER the tables at flea markets. Sic transit gloria -- and a good thing, too.

3-5U4s, used/tested for $10.00 plus postage.
Thes have been tested on a Hickok #799 tester.

Also have an assortment of NOS electrolytic caps that im still listing.
These are the "twist-lock" type.
thank you,
Gary....WZ1M

It's quite tight in some spots under the chassis,
especially in the RF box. A good spotlight will come in handy
to get light into the tight corners under the bandswitch. Don't
pass up changing the wax caps in the Rf box, several are AVC line
bypasses and almost certainly need changing.

Several of the IF trimmer caps have B+ on them, use an insulated
tool or great care.

You may find a few cracked trimmer caps near the bandswitch, they're a bit
vulnerable as they're almost flugh with the bottom. Be sure you have a
clean
benchtop when you set the radio down or you might crack some trimmers.

Regards,

George

> W3DEF >>

True, but there IS an "informal price range" for used items, and eBay has shifted this into the stratosphere. For instance, how much is a Johnson KW Matchbox worth on the used market? $100? $175? $250? $450? $1000? Because of eBay's effect on the market, no one knows the answer anymore.

If a buyer wants to pay the eBay sellers price, that's their business. But what happens on eBay has an influence on non-eBay trading. I have heard sellers at swap meets apologize for the high prices on their equipment, saying "they're selling at that price on eBay, you know".

Subject: FS: Pair of 815 Transmitting tubes.

Are you sure you are thinking of the 815? AFAIK, the 815 is a heater/cathode type, not a bright emitter filamentary tube. The 815 is a dual beam power tube, with 2 separate plate caps. Perhaps you are thinking of 811, 813, or 814?

Subject: RACAL: RA153, RA-6217, RA6778 F/S

I have two RA-6217 radios, working, but both could use realignment. $450 ea.

Also two complete RA-6778 radios which I got new from Racal about a dozen years ago, but not working, then or now. Both power up, but have problems. Near new condition. With all filters and modules. No power cord either. Manuals are available from a MD source at $75 ea . Sold as-is, but complete.

Rare rare rare....RA-153 receiver (dual RA-17 radios with one tuning mechanism). Working. See Fred Osterman's book. Pickup only on Long Island, NY at $650.
Shipping extra on all.

The other suggestions are fine. In addition, I bought and use some heavy thread that's used to sew leather. The stuff is the right diameter and is waxed. The wax, rather than being slick, helps grip the part around which its wound. It works just fine. I got quite a large spool of it for less than $2.

Subject: TS-1379/U Info

Hi All,

Anybody out there know anything about a TS-1379/U? It is advertised as an ex-Navy 2-32 MHz spectrum analyzer, is a rack mount device, and weighs 75 lbs. Seems like it must be a great boatanchor and if I can get it to work would be perfect for working on old boatanchors. Anyway I will be picking it up in a week or so and am trying to find out what I have found. As always thanks for the collective wisdom.

From: C-ap@clari.net (AP / RON FOURNIER, AP Political Writer)
Subject: US Senator goes Green!

21 Aug 2000 19:18:48 GMT

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't

running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine sticker (17K) or a Banner ad (5K):

What it Means to be Green

"At the root of all Green political action is nonviolence, starting
with how we live our lives, taking small, unilateral steps toward
peace in everything we do. Green politics requires us to be both
tender and subversive. Affirming tenderness as a political value is
already subversive. In Green politics, we practice tenderness in
relations with others; in caring for ideas, art, language, and
culture; and in cherishing and protecting the Earth. To think Green
is to build solidarity with those working for social justice and human
rights everywhere, not bound by ideologies."

-Petra Kelly

Howard there is a Model 40 on E-Bay right now -- but the auction is not over for another 5 days. Keep an eye on this and the final auction bid might give you an idea what folks are paying these days. See URL:

From: Terry Sanford <tsanford@roadrunner.nf.net>
Subject: Victor Short Wave Adaptor.

Looking for something else I came across a 'short waver converter?

Brown crackle cabinet (top missing), wooden base. Unit is 17 inches wide, 10 inches deep and 8 inches high. Knobs missing. Overall condition 'fair'; maybe a three or a four on scale of 10.

At first glance it looks like a 1930s radio receiver. I was puzzling over the make until I noticed the small "His Master's Voice" symbols moulded into the two, what I will call the 'escutcheons', through which you view the 'tuning' dials. 0 to 100. Then I found the original label on the bottom!
"Victor Short Wave Adaptor; Range 16.5 to 110 meters. " and "Victor Division, RCA Victor Company, Inc. Camden. N.J. U.S.A."

The two cord driven metal tuning dials tuning dials are each coupled to a single gang variable capacitor which are guessed to be 200 pfd. variety with wider spacing than later variable capacitors. One must be 'tuning' and the other 'oscillator'?

Also projecting through the front panel are a rotary on/off switch and a potentiometer which I've just noticed is marked "Feb12 1931 'From Magnetic Phono Cartridge' '4513'." judging by the wiring, what looks resoldered and an incorrect shaft length this may not be an original item? (Idea? Could be a reaction control!) Unless it was modified; see item removed below.

Inside the case there is a metal removable chassis on which there is a black paxolin board riveted to the main chassis mounting five (five pin) sockets. The five sockets are; UY224 (also a top cap wire), ANT (into which a single winding 'ANT' coil marked "23-45 M" {presumably metres?}is plugged, UY227, OSC coil (similar with two windings), UY227.

Tubes are out but I think I've got two of them somewhere. I don't think my '30 year old' tube tester which is also "somewhere" has a that kind of socket on it!

Underneath there are a number of metal cased capacitors, three brown plastic Aerovox USA capacitors and three carbon composition resistors. Values not visible except on one Aerovox, .005; which appears to be an 'output' of some sort. Wired with fabric wire and uses quite a lot of riveted construction.

Along the back of the paxolin sub chassis are five unmarked insulated screw terminals. Am assuming they will be; Antenna, Common negative (chassis), Heater, B+, Output. Tracing required. Presumably the output was in, say, the broadcast band to a regular receiver. With separately adjustable oscillator and tuning I suppose you could pick different output frequencies and/or use the regular receiver for fine tuning! As per a Q5er.

Apart from the missing top cover from a components point of view it appears to be complete except that someone had drilled out the rivets of what was probably a transformer (or choke) mounted mid front below the chassis, you can also see four mounting tag marks and remains of two rivets! But cant see any missing wiring other than the potentiometer mentioned above.

As I prepare to trace out the circuit of this interesting item, I think I've got tube pin connections somewhere and possibly get it going, if possible, on the one set of coils in it (13 Mhz to 6.6 Mhz. which is a 2:1 ratio btw) can anyone offer advice or suggest any source for information. Any help would be appreciated.

Many thanks for reading.

Terry S. Newfoundland. About six to eight miles from where Marconi in 1901 received the first trans. Atlantic wireless message from Cornwall in England.

Howard model 435A general coverage receiver from 1941 - works well - electrically very good (caps recently changed and all tubes check ok). Comes with a copy of the schematic. RF gain control added per Howard Company revision. Front panel very nice; all original knobs, etc., no dents, dings, etc. You may want to repaint the outer cabinet. $160 plus UPS fee from Schenectady, NY

I can second everything George has said. Good luck finding the dial lock;
most seem to be missing for some reason, if the number of "Dial Lock Wanted"
ads on the boatanchors NG is any indication.

You *can* replace those caps in the RF section, but it takes a lot of
patience, a set of long hemostats, and a soldering gun with a long tip you
can bend into position.

The IF alignment is pretty tricky. Get the manual and FOLLOW IT TO THE
LETTER. If you don't, the selectivy positions will not track right and one
position will have full gain and the other two relatively dead.

The front panel is pretty easy to restore. Pull it off, clean it with
Westley's, and buff with a light coat of paste wax. If any of the engraved
labeling needs to be re-painted, you'll have to do 'em all since
Hallicrafters used a strange shade of grayish silverish white. It's really
easy to do, however.

Every one I've worked on (at least 12) has had a screwed up or broken dial
cord for the band indicator arrows. As long as you have the front panel
off, lubricate all the bearings and gears. THis will make for much smoother
operation. Re-stringing the dial cord will exercise your four-letter word
vocabulary.

The wrinkle finish cabinet can be cleaned quite well with a stiff toothbrush
and some diluted Westley's. Take it in the shower or bathtub, wet it down,
then go at it with the Westley's. Rinse it really good. The stainless
steel trim panels shine up well with Brasso.

Be careful of the lettering on the knobs. Too much rubbing or too much
abrasive will take the lettering right off. Brasso works but DON'T use too
much pressure.

The "h" bandswitch is prone to breakage. Be VERY careful to lube the bandswitch bearings, detents, and contacts well so as to reduce the necessary torque on the knob.

I've had a bunch with busted glass in them also. No biggie, just cut a pice the right size and glue it in with Liquid Nails.

Electrically, these radios are really robust. Other than the usual suspects (bypass caps and resistors over 500K), the only thing you're almost guaranteed to have to replace is the S-meter adjust pot. It's a wirewound bastard of about 5 watts that likes to open up completely. If yours just has a bad spot (usually right where you need it for zeroing the meter), put a 1K resistor in parallel with it, this will change the operating point to a clean spot on the pot.

Enjoy it, it's a great radio.

73 John

Terry,

Try it on the radio. Set the volume up only part way. If the sound is very weak then the speaker is low resistance. Confirm this with an ohmmeter, if the speaker is low resistance it should be 2-4 ohms, or if it is high resistance 400-600. There are speakers around that are other values. If the speaker IS low resistance you can either salvage an output transformer from an old, defunct 5 tube table radio or get a line to voice coil transformer from Radio Shack. Wire the output of the transformer to the voice coil of the speaker and the input of the transformer to your radio's audio output.

Terry, generally PM (permanent magnet) speakers, up to 12" are 4 or 8 ohms (sometimes 16). If there's a transformer mounted on the speaker frame, its probably a 600-to-8 ohms type (a la Hallicrafters R-46). Try hooking it up and see if the volume level is good (not having toi run it up all the way) and no distortion. If its not good, you'll have to do an impedance transform. Radio shack has a small 8 to 600 ohm transformer and any of the small, modern military "LS" type speakers have such a transformer, inside. All else failing, a small 6.3 volt filamant transformer will do nicely (6.3 side is the 8 ohm side).

Source record: 62171

Looking for a replacement for the AF/RF/on-off switch assembly for a HW-8. Will take a junker for parts if price is right.

Also

Looking for 4 of the black plastic feet for the Drake Twins. I have the rubber bumpers from Drake.

Thanks

Pickett, AD4S

1104. FS: Large collection of rare UK boatanchors

Newsgroup: rec.radio.amateur.boatanchors

1105. 6146 Tubes F.S.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-27 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000827151508.08092.00003391@ng-cg1.aol.com>
Source record: 62173

Hello, I have some excellent 6146A tubes for sale, most look in like-new condition but some are used.
They have lost their boxes over the years, I must have at least a dozen around here.

All will be tested for transconductance on a TV-7 or 600A Hickok tester.
Most are GE, Sylvania and RCA...I think I can make up decent pairs too.
I will supply the test readings if interested.

Price for the best ones, 10.00 ea., for ones with moderate use, 6.00 ea.

Order of 20.00 and above on these 6146 A tubes gets free shipping in USA, or add 3.00 postage for Priority mail. First come, first served till they're gone.

In have a few 6146B's, NOS orig. boxes and used, but are singles.
NOS are 13.00, good used, 7.00

Hope everyone enjoyed their summer, it sure flew by quick!
If interested in these, please respond via Email.

Regards,
Joe Pratt

Well, once, anyway. After several years it all begins to blend together.
It's officially only Saturday and Sunday, but the dealers will have snatched
up all the bargains by Friday. I think they should clamp down on that.
And 2nd largest???? I don't think so. But it is big.

Source record: 62284

I picked up ("rescued") two converters that some FC has removed
the tubes and LO Xtals from (almost).
First, Tapetone XC - 144, 28-30 MHz IF. The FC didn't realize
that the LO tube and one LO Xtal are inside, so those are there,
but the other tubes (including 417A RF Amp) are missing.

The second one is a Centimeg 432 converter, looks like 10 mtr IF.
No tubes or LO Xtal.
Both are very clean inside, the FC didn't know how to open them up
I guess !!
Interesting pieces from the 60's hey-day of VHF/UHF activity.
I'll pack and ship both for $24 to anyone in CONUS.

In the 70s, on Hawaii 5-0, McGarrett was forever talking into his
personal police radio during chases, or key moments in a sting, or
when the Governor called to check in with the latest interference du
jour. I was somewhat less than amused to see him talking into a
Shure 527B noise cancelling microphone run into a Masterwork
AM/FM/Shortwave portable T/O clone.

Yes, it was more than a bit distracting.

I traded a 1956 Collins 212F Broadcast console to my equipment
supplier in exchange for some processing hardware. He called me and
told me it had been sold...to Hollywood. I was amused to see it in
Howard Stern's movie.

And then realized that my equipment had gone farther in my career
than I had.

:)

Source record: 62292
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Just got a purty good Hallicrafters SX-28 to restore. Looks complete except for the little lock on the main tuning dial. (Anyone got a spare lock in the junkbox?)

It will get the usual cleanup and overhaul, but I'm wondering if there are any special gotchas or weak points to look out for. I vividly recall the hours spent repairing the fried bandswitch on my beloved SX-42 !

Cheers.

> to determine what this old speaker is so I can match them? Thanks.
>
> Terry

Terry: I'm not sure about this but I believe if you measure a very low DC speaker resistance, that means the speaker coil has very few turns and therefore very low inductance. This means that that the 'impedance', which in any circuit is a complex quantity taking into account; resistance, inductance and (but not in this case) capacitance, will be almost entirely the DC resistance alone.

So if you measure two or three ohms DC, say, I think you can assume the speaker has an impedance of around 4 ohms.

To match 4 ohms to 600 ohms you could use a transformer with a ratio based on the square root of 600/4 = 150. i.e.around 12 to 1. I think if you used an impedance matching 'pad' you would lose too much power in the pad.

If the speaker measures higher; possibly one of those old ones, that maybe doesn't even have a permanent magnet but is energised by a magnet coil; then it may have what is today a non standard impedance other than 4 or 8 ohms.

Anyone wishing to correct or comment on this please do so.

Terry S. Eastern Canada. A few miles from where, in 1901, Marconi received the first trans Atlantic wireless message. Almost 100 years ago!

John, Old boy: Are you trying to confuse the 'Colonials"?

Translation:
"Hi; I'd like to pick it up but the battery in my station wagon is flat, I think the alternator is shot! and I'd fix it but my buddies have borrowed all my wrenches." (Trunk = Boot; Hood = Bonnet etc.)

Who was it said "We are separated by one common language"!

Anyway 'Vive la difference' as the French say. May our 'common' language continue to grow and develop and become more colourful (oops, sorry colorful!). Personally and I know this is 'off topic' tbut here is nothing better or more descriptive than a terse expressive Americanism or an ingenious British play on the meaning of a word or expression.
e.g. "Play ball". "Get stuck in". "Right on". "Too true". "Nuts". "Not on".
.... .etc. etc.

Keep those tubes (sorry, valves) glowing chaps.

Terry S.

1139. FS: HALLICRAFTERS HT-37 TRANSMITTER

Haliicrafters model HT-37 SSB/CW/AM transmitter from the early 1960's in good condition. All tubes check ok. 6146 finals and some caps were changed recently and it's getting full output on all bands. Front panel is very good. There are only a few spots on the outer cabinet that you might want to touch up. No dents, dings, etc. Comes with a copy of the manual. The only problem to report is that it is not working on LSB. I have a picture available. It is heavy and will be expensive to ship; so local pickup is preferred in the Albany, NY area. Price $265

==

Generally, a 12.6-volt filament transformer will provide a decent match in this application. The approximate 10:1 turns ratio will match 600 ohms to 6 ohms - close enough for either a 4 or 8 ohm speaker to work well. Apply the 600-ohm output to the 120-volt primary of the transformer and connect the 12.6-volt winding to the speaker voice coil. A one-amp transformer is sufficient.

From: tubecntral@aol.com (TUBE CENTRAL)
Subject: 6146 Tubes F.S.

Hello, I have some excellent 6146A tubes for sale, most look in like-new
condition but some are used.
They have lost their boxes over the years, I must have at least a dozen around
here.

All will be tested for transconductance on a TV-7 or 600A Hickok tester.
Most are GE, Sylvania and RCA...I think I can make up decent pairs too.
I will supply the test readings if interested.

Price for the best ones, 10.00 ea., for ones with moderate use, 6.00 ea.

Order of 20.00 and above on these 6146 A tubes gets free shipping in USA, or
add 3.00 postage for Priority mail. First come, first served till they're
gone.

In have a few 6146B's, NOS orig. boxes and used, but are singles.
NOS are 13.00, good used, 7.00

Hope everyone enjoyed their summer, it sure flew by quick!
If interested in these, please respond via Email.

Regards,
Joe Pratt

He has the dates correct. In fact, some even arrive before Wednesday.
By Thursday many of the bargains are gone.

Think of it as sort of the "Woodstock" of ham radio. Woodstock... as in
New York.

It's not just a hamfest, it's a "happening".

You really should go. You won't be disappointed.

Well, once, anyway. After several years it all begins to blend together.
It's officially only Saturday and Sunday, but the dealers will have snatched
up all the bargains by Friday. I think they should clamp down on that.
And 2nd largest???? I don't think so. But it is big.

I agree completely, I've been going to Shelby since 1970.
Missed the last 3 years because of conflicting schedule
with the AWA Conference in Rochester.

I had to drive 1 1/2 hours there this morning to reserve some
flea market spaces just so we could be inside the fair grounds
when we arrive at 6AM Saturday morning. When I got there at
10:15AM there were ALREADY dealers set up and open for

business and all of the prime spaces were already reserved.

If you do go, be sure to stop by and say hello.
We'll be set up on the center row, straight out from
the restrooms in the grass. Look for the CC-AWA banner.

You better check them again! As I read them that makes the swap/fest almost
a year long. <G>
It's listed as Wednesday in september through a Saturday in August!

Subject: Delivery & Pick-up...Available...?

Hello..........NG
I will be traveling to Seattle from the East coast, New York this week
(Or anywhere else if need be....)
Anyone need any big heavy items picked-up & delivered
(Jukeboxes, tape machines, radios, consoles, pinball machines boatanchors,
organs, pianos, etc.)
Leaving for Seattle &Cal. (and all points in-between)
By end of this week.
Leaving for back east by the second week of Sept.
Down south shortly after that.
Please let me know if you need anything picked-up or delivered.
Thanks....... Mike

Subject: gotchas to look for in Hallicrafters SX-28?

> It will get the usual cleanup and overhaul, but I'm wondering if there are
> any special gotchas or weak points to look out for.

It's quite tight in some spots under the chassis,
especially in the RF box. A good spotlight will come in handy
to get light into the tight corners under the bandswitch. Don't
pass up changing the wax caps in the Rf box, several are AVC line
bypasses and almost certainly need changing.

Several of the IF trimmer caps have B+ on them, use an insulated
tool or great care.

You may find a few cracked trimmer caps near the bandswitch, they're a bit
vulnerable as they're almost flugh with the bottom. Be sure you have a
clean
benchtop when you set the radio down or you might crack some trimmers.

Regards,

George

I can second everything George has said. Good luck finding the dial lock;
most seem to be missing for some reason, if the number of "Dial Lock Wanted"
ads on the boatanchors NG is any indication.

You *can* replace those caps in the RF section, but it takes a lot of
patience, a set of long hemostats, and a soldering gun with a long tip you
can bend into position.

The IF alignment is pretty tricky. Get the manual and FOLLOW IT TO THE
LETTER. If you don't, the selectivy positions will not track right and one
position will have full gain and the other two relatively dead.

The front panel is pretty easy to restore. Pull it off, clean it with
Westley's, and buff with a light coat of paste wax. If any of the engraved
labeling needs to be re-painted, you'll have to do 'em all since
Hallicrafters used a strange shade of grayish silverish white. It's really
easy to do, however.

Every one I've worked on (at least 12) has had a screwed up or broken dial
cord for the band indicator arrows. As long as you have the front panel
off, lubricate all the bearings and gears. THis will make for much smoother
operation. Re-stringing the dial cord will exercise your four-letter word
vocabulary.

The wrinkle finish cabinet can be cleaned quite well with a stiff toothbrush
and some diluted Westley's. Take it in the shower or bathtub, wet it down,
then go at it with the Westley's. Rinse it really good. The stainless
steel trim panels shine up well with Brasso.

Be careful of the lettering on the knobs. Too much rubbing or too much
abrasive will take the lettering right off. Brasso works but DON'T use too
much pressure.

The "h" bandswitch is prone to breakage. Be VERY careful to lube the
bandswitch bearings, detents, and contacts well so as to reduce the
necessary torque on the knob.

I've had a bunch with busted glass in them also. No biggie, just cut a pice the right size and glue it in with Liquid Nails.

Electrically, these radios are really robust. Other than the usual suspects (bypass caps and resistors over 500K), the only thing you're almost guaranteed to have to replace is the S-meter adjust pot. It's a wirewound bastard of about 5 watts that likes to open up completely. If yours just has a bad spot (usually right where you need it for zeroing the meter), put a 1K resistor in parallel with it, this will change the operating point to a clean spot on the pot.

Enjoy it, it's a great radio.

The lettering on the knobs is intact, but . . . .after a previous owner stripped the paint off the front panel (down to bare metal), he gave the

panel *and* the knobs a nice thick coat of varnish, which has darkened with age. Maybe it was supposed to be a 1960's look -- the seller said it was like that when he got it from a buddy in the late 1960s. No problem to strip and repaint the panel, but I doubt that I can remove the varnish on the knobs without also removing all their lettering. I suppose if I use the set long enough, the varnish on the knobs will wear away and look almost original again :-)

> Electrically, these radios are really robust. Other than the usual suspects

The S-meter on mine is not very responsive (OK, almost totally unresponsive), although the radio receives well on all bands. I'm not going to worry about that a whole lot until I finish recapping and checking suspect resistors. I did make a quick check of the S-meter adjust pot and it is working within the 0-500K range. B+ voltage is also in the right ballpark.

Thx again for all the advice. No question, those caps in the RF section are nasty to reach!

hehe; I've also been in that particular "hole" in North Bay, only in the early eighties. Oddly enough, they were going through a similar retrofit at the time to thier computers.

Actually, none of the Government departments can sell to any entity directly. In the Federal Governents case, these items are sold through a department called "Crown Assets" (unless the name has been changed in the last few years). Items are grouped into lots and categorized, interested parties can then make bids on them in sealed auctions, although some items are occaisionally displayed in a public auction. This still makes that fellows comments accurate enough; I'm sure Hollywood and the like are on the mailing list for some of that stuff.

Cheers!

John

Subject: Speaker Coil Question

I have an old unknown maker/type 8" round speaker. The receiver I want to use it with requires a 600 ohm speaker. Is there a simple way to determine what this old speaker is so I can match them? Thanks.

Terry

Date: Sun, 27 Aug 2000 13:40:35 -0400
From: "D. S. Platt" <jeepp@erols.com>
Subject: Speaker Coil Question

Terry, generally PM (permanent magnet) speakers, up to 12" are 4 or 8 ohms (sometimes 16). If there's a transformer mounted on the speaker frame, its probably a 600-to-8 ohms type (a la Hallicrafters R-46). Try hooking it up and see if the volume level is good (not having toi run it up all the way) and no distortion. If its not good, you'll have to do an impedance transform. Radio shack has a small 8 to 600 ohm transformer and any of the

small, modern military "LS" type speakers have such a transformer, inside. All else failing, a small 6.3 volt filamant transformer will do nicely (6.3 side is the 8 ohm side).

Terry Brown wrote:

Date: Sun, 27 Aug 2000 17:41:04 GMT
From: Charles Days <oldradiodays@mediaone.net>
Subject: Speaker Coil Question

Terry,

Try it on the radio. Set the volume up only part way. If the sound is very weak then the speaker is low resistance. Confirm this with an ohmmeter, if the speaker is low resistance it should be 2-4 ohms, or if it is high resistance 400-600. There are speakers around that are other values. If the speaker IS low resistance you can either salvage an output transformer from an old, defunct 5 tube table radio or get a line to voice coil transformer from Radio Shack. Wire the output of the transformer to the voice coil of the speaker and the input of the transformer to your radio's audio output.

Anybody got some old tube TV type power transformers that might suit this
application?

Subject: FA: Hammarlund HX-50A Transmitter (MINT)

This rig has seen little or no use prior to my ownership of it. I only
brought it up once with variac for a test run on 20 meters which it passed
in all modes. Original Carton, Manual and a rig so clean it looks and
smells like the box was just opened.
Hammarlund collectors, take a look.

From: Terry Brown <terry.brown6@att.net>
Subject: RCA AR88/CR88 Help

I just received what I think is a CR88 but I can't find anything
inside or outside indicating what model it is. Also, the round red and
silver RCA emblem is missing from the front panel (anyone know of one or
a reproduction?). There is no case...the front panel is black wrinkle
finish. It has an S meter and a small control in the lower right front
panel that is a crystal calibrator.
Does anyone know how to tell which model this is? Are there any
AR88/CR88 collectors or fans I could visit with to get some help? I
downloaded the CR88 manual from BAMA but mine doesn't match it. Anyone
have a manual covering the models with calibrators?
It looks like I may need the power/mode switch. Anyone have one
from a junker or know who I might contact? Thanks and 73.

Terry (KA5IHV)

Right- basically use whatever you can come up with that works. After all, an 8 ohm speaker can be 8 ohms only at one frequency, and unless youi plan on listening to one tone only it won't stay there.

Interested in buying a good, clean, used (but not used up) Yaesu FT-902DM
radio and accessory items for that line. Surely someone has one of these
fine hybrid radios that is playing second fiddle to that newer radio you use
as your main rig. Here's a chance to get some cash for that second radio
that's not getting the attention it deserves.

Tnx & 73

I would try a hardware store. Not a big chain like Lowe's or Home Depot, but a smaller "Mom 'n Pop" type store. I think those are either #4 or #6 screws. Take the plug along with you and test-fit as necessary.

Phil = the S meter on a properly working '28 should be very responsive, You
have a problem somewhere. IIRC, without looking at the schematic, the
Smeter measures plate current on one of the RF tubes, or perhaps plate
current on one of the IFs. Regardless, check the voltages on all the tubes.
You probably have a bad cap or bad resistor somewhere.

Hi Everyone! Just wanted to let everyone know that this Thursday Aug. 31st
is the next Collins Collectors Association AM Night. Starting at 0800 CDT on
3885.
Net controls will be Butch K0BS on his KW1, Brian KC0DVE on his Johnson Desk
Kilowatt, and Larry WA9VRH on his... well.... Johnson Ranger and 30L-1. (ok
so it's
not a kw rig but sounds good). EVERYONE is welcome to checkin no matter what
AM
gear you are using. AM night has always been a "Night to Remember" Please
stop by
and say "Hello" and get the chance to hear some fantastic AM gear. 73's
Larry WA9VRH

> I think they should clamp down on that.

I agree completely, I've been going to Shelby since 1970.
Missed the last 3 years because of conflicting schedule
with the AWA Conference in Rochester.

I had to drive 1 1/2 hours there this morning to reserve some
flea market spaces just so we could be inside the fair grounds
when we arrive at 6AM Saturday morning. When I got there at
10:15AM there were ALREADY dealers set up and open for
business and all of the prime spaces were already reserved.

If you do go, be sure to stop by and say hello.
We'll be set up on the center row, straight out from
the restrooms in the grass. Look for the CC-AWA banner.

73,

Ron

The lettering on the knobs is intact, but . . . .after a previous owner stripped the paint off the front panel (down to bare metal), he gave the panel *and* the knobs a nice thick coat of varnish, which has darkened with age. Maybe it was supposed to be a 1960's look -- the seller said it was like that when he got it from a buddy in the late 1960s. No problem to strip and repaint the panel, but I doubt that I can remove the varnish on the knobs without also removing all their lettering. I suppose if I use the set long enough, the varnish on the knobs will wear away and look almost original again :-)

> Electrically, these radios are really robust. Other than the usual
suspects

> guaranteed to have to replace is the S-meter adjust pot.

The S-meter on mine is not very responsive (OK, almost totally unresponsive), although the radio receives well on all bands. I'm not going to worry about that a whole lot until I finish recapping and checking suspect resistors. I did make a quick check of the S-meter adjust pot and it is working within the 0-500K range. B+ voltage is also in the right ballpark.

Thx again for all the advice. No question, those caps in the RF section are nasty to reach!

hehe; I've also been in that particular "hole" in North Bay, only in the early eighties. Oddly enough, they were going through a similar retrofit at the time to thier computers.

Actually, none of the Government departments can sell to any entity directly. In the Federal Governents case, these items are sold through a department called "Crown Assets" (unless the name has been changed in the last few years). Items are grouped into lots and categorized, interested parties can then make bids on them in sealed auctions, although some items are occaisionally displayed in a public auction. This still makes that fellows comments accurate enough; I'm sure Hollywood and the like are on the mailing list for some of that stuff.

Cheers!

John

From: Nick Kennedy <nkennedy@my-deja.com>
Message-ID: <8og7on$ui0$1@nnrp1.deja.com>
Source record: 62082

The Drake 2B is a wonderful all tube receiver from the early 60's that's hard to beat. Pretty much designed for SSB. A lot smaller that a HQ-180, so if you want boatanchor heft, the Hammarlund may be for you.

You mentioned SWLing--not sure if you're after general coverage or ham bands only. The Drake 2B has a few extra bandswitch positions & crystal slots left open so you can add other bands if you wish.

73--Nick, WA5BDU

John, Old boy: Are you trying to confuse the 'Colonials"?

Translation:
"Hi; I'd like to pick it up but the battery in my station wagon is flat, I think the alternator is shot! and I'd fix it but my buddies have borrowed all my wrenches." (Trunk = Boot; Hood = Bonnet etc.)

Who was it said "We are separated by one common language"!

Anyway 'Vive la difference' as the French say. May our 'common' language continue to grow and develop and become more colourful (oops, sorry colorful!). Personally and I know this is 'off topic' tbut here is nothing better or more descriptive than a terse expressive Americanism or an ingenious British play on the meaning of a word or expression.
e.g. "Play ball". "Get stuck in". "Right on". "Too true". "Nuts". "Not on".
.... .etc. etc.

Keep those tubes (sorry, valves) glowing chaps.

Terry S.

I would try a hardware store. Not a big chain like Lowe's or Home Depot,
but a smaller "Mom 'n Pop" type store. I think those are either #4 or #6
screws. Take the plug along with you and test-fit as necessary.

Phil = the S meter on a properly working '28 should be very responsive, You have a problem somewhere. IIRC, without looking at the schematic, the

Smeter measures plate current on one of the RF tubes, or perhaps plate current on one of the IFs. Regardless, check the voltages on all the tubes. You probably have a bad cap or bad resistor somewhere.

From: Terry Sanford <tsanford@roadrunner.nf.net>
Subject: Speaker Coil Question

Terry Brown wrote:

> I have an old unknown maker/type 8" round speaker. The receiver I
> want to use it with requires a 600 ohm speaker. Is there a simple way
> to determine what this old speaker is so I can match them? Thanks.
>
> Terry

Terry: I'm not sure about this but I believe if you measure a very low DC speaker resistance, that means the speaker coil has very few turns and therefore very low inductance. This means that that the 'impedance', which in any circuit is a complex quantity taking into account; resistance, inductance and (but not in this case) capacitance, will be almost entirely the DC resistance alone.

So if you measure two or three ohms DC, say, I think you can assume the speaker has an impedance of around 4 ohms.

To match 4 ohms to 600 ohms you could use a transformer with a ratio based on the square root of 600/4 = 150. i.e.around 12 to 1. I think if you used an impedance matching 'pad' you would lose too much power in the pad.

If the speaker measures higher; possibly one of those old ones, that maybe doesn't even have a permanent magnet but is energised by a magnet coil; then it may have what is today a non standard impedance other than 4 or 8 ohms.

Anyone wishing to correct or comment on this please do so.

Terry S. Eastern Canada. A few miles from where, in 1901, Marconi received the first trans Atlantic wireless message. Almost 100 years ago!

==========

Generally, a 12.6-volt filament transformer will provide a decent match in this application. The approximate 10:1 turns ratio will match 600 ohms to 6 ohms - close enough for either a 4 or 8 ohm speaker to work well. Apply the 600-ohm output to the 120-volt primary of the transformer and connect the 12.6-volt winding to the speaker voice coil. A one-amp transformer is sufficient.

Right- basically use whatever you can come up with that works. After all,
an 8 ohm speaker can be 8 ohms only at one frequency, and unless youi plan
on listening to one tone only it won't stay there.

Subject: Collins Tube Help

G'day, Ive just purchased a complete Collins KWM-2 station which came with
the 30-L-1 amplifier. Everything is complete and working but the amp came
minus tubes. The only place in Australia Ive been able to find that stocks
811A tubes tells me they (the ones they stock) are no good as they MUST be
mounted vertically. Is there a difference?

Thanks
Ross

Subject: Collins Tube Help

Hello Ross, you will enjoy the Collins equipment .. on the 30L1 tubes ,you will
need to get tubes certified to work horizontaly, thats because the internal
elements supports are not strong enough to keep the elements from sagging and
shorting . I would be looking for military Jan 811 tubes ,they were designed
to work in aircraft equipment and all sorts of rough service.. good luck 73

From: "Crazy George" <munschNO@attglobal.net.SPAM>

Subject: Collins Tube Help

Maybe so, maybe not. The original design specs for 811As provides for vertical mounting base down, or horizontal with pins 1 and 4 in a vertical plane (RCA TT-5). If the manufacturer built to those same specs, then the 30L1 is designed for the latter case. I think Svetlana meets most RCA specs, and I know of several 30L1s using Svetlana tubes. What brand is your source selling? I have been told that the 572B is a rugged replacement for the 811A, and is another type to consider.

Here's what Svetlana says about THEIR 811A's:

"...The internal structure is well supported and is aligned with respect to the base pins to avoid internal shorts in equipment designed for horizontal mounting of the original RCA 811A...."

Subject: FA : in october -still new ranger1 factory wired

Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck

From: "Ted Ling" <lingted@Hotmail.com>
Subject: Marine VHF Antenna Question

A friend and I are installing a VHF Marine radio in his 1989 5th wheel.
He's placed a Shakespeare 5206-C antenna on a 15' pole. The camper is
already wired for cable TV, which he would like to use for this application.
. I know some of the cable run is RG-59, but am not sure if all of it is.
The antenna came with RG-8 or RG-58 (the smaller diameter of the two). Can
we mix and match these cables? Will the RG-59
work OK for these marine frequencies? Generally speaking, is cable TV cable
appropriate?
For this application? What cables (types) are appropriate to use
in this application? If this is an inappropriate news group to ask theses
questions, please
suggest another. Thanks.

You should use the RG-58 all the way. Unlicensed use of a marine radio
is not appropriate for a trailer unless the trailer is floating on a
barge. If you want to talk from the campsite to a boat, you need to
check with the FCC to see what kind of license you need or use a
different service.

Subject: WHAT ARE THESE TUBES???????

A pulse triode used in radar modulators and similar applications. Used to
switch a very high voltage (20-30 kV) and moderate currents (tens of amps)
at a low duty cycle. Used to drive a magnetron.

These kind of tubes are often poor performers as modern ham amp tubes, as
they are usually quite non-linear. They might be better suited to class C

amplifiers. I have heard that this type of tube is very good for a tesla
coil driver, if you are into that sorta stuff.

I have a pair of ITT F-7030 pulse radar tubes (clipper diodes) sitting on a
shelf in my shack. With the heavy finned copper anode radiators, they make
great bookends!

> > Chicago, Il.

>>>

This should probably be < rec.radio.amateur.homebrew > but if I may OT on
'Product Detector'?

What would be a good place to get info on a product detector that I Icould
add to a circa 1940s British miltary tube receiver? The IF is 465 kcs.

I don't want to chop any holes in the old monster. But overall it appears
stable enough to receive SSB, and the BFO itself has a reduction drive
tuning control. So, I'd like to try an add on product detector that would
not become a permanent part of the receiver?.

What I'm thinking about is something I could build on a small plate (lots of
room in there!) with a lead to plug into the audio amp, detector tube socket
which is a Mullard EBC33, pretty well the equivalent of a 6SR7/6SQ7. Have to
check the AVC diode also, it's in the same tube! If transistorized I think I
can get DC from the 12-14 volt AC heater line to the tube socket via a
rectifier and smoothing, or from a divider network across the B+/HT of the
receiver which is easily accessible. The 6.3 volt tube heaters are in
series/parallel btw.

Anybody steer me in the right direction, for a circuit?

Thanks. Terry S..

The Hammarlund HQ-180 is general coverage and you pay extra for that.
The HQ-170 is ham bands only, performs similarly to the 180, and is
available under $200 in good condition.

Others:

The Drake R-4B and R-4C are excellent and reasonably priced.
The Collins 75A4 is also excellent but expensive.
The Collins 75S3B or 75S3C are both excellent but expensive.
The Heathkit SB-301 or 303 (ham bands) or SB-310 (SWL) are very good
and reasonably priced.

All of these radios are fun to use. Good luck.

National model NC-45A general coverage receiver in good condition and working well. The tubes all check good and many caps were replaced. It has all original knobs, no dents, dings, mods, etc. This radio would be a fine addition to your station rack. The NC-45A is a rack mounting version of the NC-45. Ask me for a picture! I will pay for professional double-boxing. $150 plus UPS fee from Albany, NY area.

I assume you mean September...

It's a shame you couldn't have done something about
not conflicting with the AWA conference in Rochester.

The mention of Steve McGarrett on Hawaii Five-O reminds me of his "portable" unit. I'm not sure what the radio was, but it was probably a Radio Shack or Lafayette CB walkie talkie, because I remember him pulling out that mile-long whip antenna, section by section, just to say, "OK, 10-4", then retract the thing, again section by section. Gee, in real life I seem to recall rubber duckies were out by the early 70's...

1187. For Trade: Heathkit SB-301/SB-401

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-29 00:00:00 UTC
From: Tim Cook <timcook@erinet.com>
Message-ID: <39ac8126$0$35383$53a6afc1@news.erinet.com>
Source record: 62101

I have the following to trade:
Heathkit SB-301 Receiver with CW filter, looks and works good
Heathkit SB-401 Transmitter with xtal pack, also looks and works good
All interconnecting cables
both original manuals and power cords

The cases on both are in good condition, could use a good cleaning but look good as is, some wear and scratches. The screws that tighten the top doors shut are missing on both units. The front panels on both are close to perfect, all original knobs and the lettering on the panels is still nice and crisp, not worn. I had them on the air a few days ago on cw and ssb both in separate and transceive. It has full power out on all bands.
I would like to trade for a solid state transceiver of some kind, Ten Tec, Kenwood , etc, what do you have to offer??

please email direct if interested
Thanks
Tim

1198. FS/FT: MCR-1 spy (biscuit-tin) receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-30 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8oiiav$34u$1@mailint03.im.hou.compaq.com>
Source record: 62116

I have an MCR-1 spy receiver. This unit was build under license shortly after the war by MBLE from Brussels presumably for the Belgium ministry of defence, the text on the set is in French
I have no idea what kind of usage they had in mind when they ordered these receivers but they where never issued or used.
This MCR-1 is in mint condition, has a brown wrinkle finish coating and is complete with all the coil packs. It is carried in a canvas backpack that also holds the ground spike, wire antenna and headset. The headset is made out of a cotton scull cap which houses the two elements positioned over the ears. (They make nice ear warmers during the winter) A pair of spare headset elements is also present.
Because there are no batteries available I've build a small power supply that fits in the battery compartment of the backpack. The unit worked fine once I repaired it (the tiny output transformer had an open winding).

As I already mentioned this is a post war production but in a new, complete condition. It is very unlikely one will ever find a wartime MCR-1 that will match this condition.

I'm interested to sell or swap this unit (prefer swap). My main interest is in British HF sets like the A13, Redifon GR479, GR410, Racal Squadcal-Comcal-Syncal, PRC-320 etc.

Hi Vern -- see URL:
http://ac6v.com/pagep.html
For a list of BA and CW nets -- can't vouch if these are active or defunct as
they come and go rapidly. Would be interested in any updates, additions,
deletions and the URL for your finished list.

Message-ID: <f98r5.21$jJ5.3554@bos-service2.ext.raytheon.com>
Source record: 62126

Hi Vern,

A lot of the BA operators hang out around 7050 kc on 40 meters.
The QRM from foreign SSB (mostly Spanish-speaking) is sometimes
heavy, but that's typical on much of the 40m CW band here in the
South. I get on 7050 from time to time with my BA and homebrew
CW gear (drop by my web site and check out the pictures!).

Source record: 62127

That's W1AW on 3580? I thought it was every crappy colour TV in
town....Wonder why the ARRL transmits that raggedy dead carrier
for hours on end?
Seriously, I have wondered for years why stuff like BA's and QRP
ops use 3580 for a "calling frequency". The hash from nearby TV
burst oscillators makes it un-usable for most of my gear, but real
easy to check dial calibration....

73,
John WB9OFG

Subject: *** New photos on BA web site ***

Okay folks,

I've been working on the boatanchor section of my web page and have added a
bunch of new photos. It's URL is:

http://www.mindspring.com/~cacutts/radio/ba/ba.html

I wanted to get this done before Shelby, now that it's complete I can get back
to my RBC-4 instead of html and jpg files!!

Enjoy,

Allen Cutts

Subject: A good vacum tube receiver?

I'm wondering what would be a good performing boat anchor receiver for
SWL(other than the R-390) that's also able to hear SSB?

The only tube receiver I ever owned was a Hammurland HQ-110, and I loved it
but it needed a lot of work so I got rid of it.

Would like to hear comments from some of you more experienced folks out there,

Thanks,

Gil

Subject: FA : in october -still new ranger1 factory wired

<<
Hello Johnson fans,
I will be listing an unused factory wired Johnson Ranger 1 on Ebay in mid October. Unit was a Armed Forces spare back-up unit (NEVER USED) for 20 years Unit was surplused in mid 70's and then stored in a basement of a wannabe ham.
I will be showing pictures of the opening of the case showing the original packing, etc.
This one is for real, it hasn't seen volts since it left Waseca.
I will post an announcement once only, when the listing starts.
Good Luck
declind@sympatico.ca
>>

Thanks for advance notice of this important event. Personally, I find the idea of "new" vintage gear fascinating. Will the lucky buyer (who probably has paid a premium for the privilege) actually use the NOS equipment or store it away as a rare museum piece? Or will they use it once and then re-sell it?

Hey, you could have Geraldo Riveria open it on a live webcast. Or maybe promote it like the WWF, you know, "Ranger I Smackdown" and have the bidders fight over it in a wrestling ring on Pay-Per-View. Or you could have 10 people stranded on a desert island try and outlast each other for a chance at having one QSO using it. (Just call the show "Ranger").

Anyway, for those of us in the peanut gallery, I say get your side bets down. I predict the final selling price will be around $1,100.

Factory wired, unused? I'd bet closer to $2,500. Especially if the
computer photos are in focus :-)

From: "Mike" <abc@123.net>
Subject: Vintage-Radio e-mail Reflector

This list will prove beneficial to anyone who is interested in the
collection,
restoration, and operation of vintage radio equipment. While this list will
deal mainly with American-made amateur radio receivers and transmitters,
other makes are welcome so long as they fit the category of "vintage". To
qualify for vintage status a set must be 25 years old and preferably
contain some vacuum tubes. This category can include military, home
broadcast sets, commercial equipment and homebrew equipment. Any homebrew
equipment using vacuum tubes and operating CW or AM will be considered
"vintage" equipment no matter what the age. Accessories such as keys,
antenna tuners, watt meters, test equipment, etc. is also considered a part
of the Vintage hobby and will be welcome if it is at least 25 years old.

I sincerely hope that you will join our group of vintage enthusiasts. With
your help we can make this a great List.

Please do NOT subscribe using a forwarding e-mail account (e.g. qsl.net;
arrl.net). Please use your actual, non-forwarding address only.

To subscribe, send e-mail as follows:

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe vintage-radio

You can also subscribe at http://www.qth.net , select vintage-radio from the drop down list.

Howdy do from Dallas Texas! - Looking for some old timers for help. I am looking at building a tube XMTR near the 100 watt class and I came across this RCA ad in QST. Here is the link to it - it does take some time to load because I wanted to show the circuit in some detail.

http://www.megacycles.com

The question is - has anyone tried building this non-MOPA rig? I have heard stories of people that did and had shattered XTALS and nasty TVI. I had planned on building this ala breadboard unless someone can talk me out of it.

I'll try the BA NG first as it appears the other NG's are well into that solid state stuff.

Source record: 62133

Here's just the thing to round off your boatanchor or vintage radio collection. A set of Sensiphone dual-earpiece headphones by Superex -- Made in the USA! These headphones are light grey in color, with a vinyl headband. The yokes are easily adjustable and spring-loaded. The cord for the headset is black in color, and terminated in a standard 1/4 inch phone plug. I took a quick look through my Allied Radio catalogs, and it looks as if these heaphones were manufactured during the mid to late '60s.

I imagine these headphones could be used with a crystal radio, as well as the Knight-Kits, HeathKits, and Lafayette receivers of that era.

I guarantee that these headphones will not be DOA. I just tested them with my Star Roamer and they work fine. Have fun bidding!

Oh, boy! Someone who's actually familiar with one of my favorite movies, one that entranced me when I saw it as a high school student 40 years ago and started me on a passionate affair with Neville Shute's fiction, and whose scenes from an empty but intact San Francisco, with the episode at the oil refinery, haunt me still.

I wasn't aware enough at the time to have noticed the details of the radio station, and can't lay my hands on my video of the film (just moved). What was it?

Well, You might wanna try out the ol Cary Grant film "Father Goose".
Now that film had some radios in it. Really neat Collins 51J whatever
look alikes only in navy gray. Plus the rig in the shack where he stayed
in contact with the HQ station. Many great radio shots. Been a while since
I have seen it so memory is foggy. K0AZ

> "CW and boatanchors: Isn't life too short for anything else?"

Of course!

3579.545 is always good, in darkpath and winter. Folks have tended
to have drifted down to 3578, because of 1AW skeds, and that is fine.
Anywhere in the ballpark or the bandwidth of yer tin cans will do.

The generic most recently agreed upon Boatanchors and Glowbugs CW
meeting places are:

QTR QRG

10120khz 0100Z
7147khz 0200Z
3578khz 0300Z
1803khz 0400Z

although some show up anytime on the above QRG's. In winter we mostly
inhabit 3578 and 1803, which is prime Hartley/regen territory. Folks show
up usually on bugs or on straight sendin' irons running everything from
1920`s Hartleys to anything what glows in the dark. If ye can`t muster
up a currently running Boatanchor or Glowbug rig, then muster up whatever
ye canst muster! Class B waves be not allowed.

Call..... CQ BA CQ BA DE yourcall K

a few rounds, if noone is there, or just jump into the roundtables.
These are not nets, but just friendly roundtables.

So, grapples ye up yer tin cans atops yer noggins, an' a'readies ye
yer keys at the fore, an' stokes ye up yer firebottles!

ZUT OM DE NA4G/Bob UP

> easy to check dial calibration....

The original reason was the commonality of 3579R545 rocks for the
glowbug gear. In summer the band can be hectic there with the hash,
but, in winter, it really does not bother a good setup. Many of
the folks who have hash problems (mebbie chuck the poor junk tv stuff
and get the XYL a good set?) have moved down to 3578R0 which is fine.
The rest of us inhabit 3579R545 and keep on truckin'. Funny, tho,
the hash doesn't bother my really ancient gear like Hartleys and
regens. Mebbie it is the too modern ham gear with the RF stages
run too wide open for real Boatanchoring or Glowbugging use?.....(:+}}...

> http://www.megacycles.com

That is the classic RCA high powered xtal oscillator set.

Several of the BA/GB folks have built them and run them. They work
just fine. Be very, very careful around the high voltages used, and
always key by relay. The lamp in the xtal line prevents xtal burnout,
but even then, don't use tiny xtals but good healthy sized ones (such
as FT-171 or R1 sizes) if you can.

Check http://www.mines.uidaho.edu/~keng/sch/ for more details.

Good Luck

Bob/NA4G

Marc,
I have a Lafayette LR-800 amp/receiver that has 4 ea. 7189 valves in
it's output. It works very well. (the amp has it's production date - May 1965
stamped on the rear) It's super heavy though - weighs about 50 lbs.
I'd be interested in trading you for your equiptment. The apm/receiver runs off
of 110 volts AC 60 cycle. I believe there is a provision for operating it from
220 as well.
Any reply will be appreciated.

For Sale: A beautiful Rohn freestanding 64 foot tower. It is the BX model and is in perfect condtion. It is located in Williamsville, NY (near Buffalo) and is still standing. Buyer will have to take down and remove. It belongs to the widow of K2BD and she will let it go for $300. This is a real steal but she would like it removed. Also included is an EZ way 45 foot tower on a wonder groundpost. The groundpost is cemented in and probably would not be removeable. The last item to go with the package is a three element tribander. I think it is a TA-33.

This is a package deal and nothing will be separated. The purpose is to have all of the antennas removed before winter.

Please contact me by e-mail or call 716 741 3776

From: jarodenbarger@stew-01.cea.purdue.EDU
Message-ID: <iss.40fd.39ae696a.8a568.1@scribe.cc.purdue.edu>
Source record: 62202

Thanks to everybody who responded to my question earlier about
HQ-110 vs. SX-73. From the subject line, you can guess what I
decided to do. I've gotten enough wisdom from this list to get
through cleaning all the contacts/controls and replacing PS filters
and whatnot, but I have some other questions.
1. Ceramic disk caps and "postage stamp" mica caps? Replace
'em, or let 'em be?
2. "Bathtub" caps?
3. Any ideas on what the impedance of the coax that runs to and
from the 6 Mc. IF relay is? Does it get leaky over time, and on the
topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
Curable?
4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?
5. Is "No-oxid" really that great of stuff to use?
Thanks, and have a great weekend.

73 and ZUT,
John WB9OFG

1253. Best of the Boat Anchors. The Winners are....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-31 15:15:42 UTC

Message-ID: <4.3.2.7.2.20000831081021.00b463d0@vipmail.earthlink.net>
Source record: 62203

Everyone, please forgive me if this is a well worn topic. I just joined the list and am pretty much of a novice at , to coin a word, boatanchoring.

I have been told the best Collins is the 390, the best Hallicrafters the SX-28, Hammalund and Racal???. But this may be way off the mark.

So if this isn't asking too much, I'd to find out the top 2 or 3 boatanchor receivers from each major company.

Also I'd like to know if there are any swap meets, ham fests, etc. in the Southern Calif area so that I can see and purchase one of these great old rigs.

cheers
Scott
Los Angeles

I'm assuming that you are not looking for perfection, so virtually any of
the old receivers that had a Beat Frequency Oscillator (BFO) for copying CW
will do a creditable job of copying SSB. It just takes getting used to
tunning both the VFO and BFO when you change from one side band to the
other.

I used an old Hallicrafters S40B with a Heathkit Q multiplier and was able
to copy SSB. .

Subject: A good vacum tube receiver?

The Hammarlund HQ-180( ) is a nice one, although I don't like the audio, at all. Any of the general coverage HQ-series would do nicely, from the HQ-140, 145, 150, and the 160 (The 170 is ham bands only). Any of the Hallicrafters will do OK, too.. such as the S-85, SX-99, and the SX-100. One has to watch the prices, however, especially on Ebay. I would recommend going to a hamfest so you can see and touch what you're buying (and hopefully get to smoke test it). There are many many more very good receivers, but all too many are fetching high prices these days. Look around and bide your time..the right one will pop up in good time!!

To properly demodulate SSB a product detector and not a BFO is much
more desirable. Stability is also a good assit.

You didn't mention if your wanting general coverage or ham bands only.
For Ham only, the SX-111 Hallicrafters was a decent receiver. Had
selectable filters and a product detector.

In the Hammarlund the HQ-180 is a general coverage jobber.

And the HQ-150 has a Q-multiplier that can be used as a remarkable noise filter for SSB.

This Professional Audio Compressor/Limiter is perfect for any vintage AM audio chain. If you want to beef up your Boatanchor Transmitter Audio to have punch and apparent loudness this is for you. Remember how some signals sound weak and unlistenable? Others, on the otherhand, are a pleasure to listen to. It is always commented the fact, "You have Broadcast Quality Audio!" This is part of the reason why it can be possible. This Pacific Recorders Limiter is a Broadcast piece of audio equipment, you can use on you BA rig.

If you don't need this mention it to one of your Ham friends! The reserve is a fair one for this quality item.

I think we have left out one of the best!! That being the ITT MacKay 3010C receiver. This general covers receiver will run circles around a R-390 and 51J4, I know since I have both of them. This radio is one of the sleepers out in the market place. Designed for marine service it has one of the best sensitivity rating going, that being .11 UV. most radio are .15 and up. IM distortion and 2nd and 3rd order products just don't exist. The AM audio is fantastic and SSB reception is wonderful. Under the hood we have , what else, 2 collins mechanical filters, same ones as used in the 75A-4 another great radio! And of course each his own! When it comes time to pick it up and take it to the beach or park, well my Sony ICF-6800W or CRF-1 radio is the best.. Enjoy!!!!

I built one a few years (decades!) ago. Bought it while on R&R in Tokyo. I thought I'd test the radio out in the hotel, and was I surprised; not only was it a kit, but the instructions were all in Japanese. It took only a couple of nights work to build on a vacant bench in our avionics shop, though.

Alignment is straightforward, really. If the set is on frequency, all you need do is peak the high end antenna and RF stage caps on the CB or ten meter band and the coil on the low end. It make take a couple of iterations to get this in there,. And be wary of peaking on images; with a 455 KHz IF you will hear CB images around 28 MHz.

boatanchor
> receivers from each major company.
>

Collins: R-390 (not "A"), R-391, 651S-1
National: HRO-500, HRO-60, HRO-50
Hallicrafters: SX-73, SX-88, SX28
Hammarlund: HQ-180, PRO-310, SP-400
Drake: R-4/C, 2A/B/C, 1A
TMC: GPR90/91/92

My criteria in the above list is build quality, audio quality, ease of service, electronic performance (sensistivity, stability, etc), usability, and looks (not necessarily in that order).

The 51J/75A series has horrible audio and crummy front end performance. The 51S-1 isn't a lot better.

Any non-HRO National is definitely a step down performance-wise from the HRO series.

I think the SX-88 is vastly over rated - nothing much more than a bigassed SX-100 with a bit better stability. The SX-28 is there because it is, bar none, the best looking receiver ever. Performance is adequate by today's standards but doesn't begin to come close to the rest of the receivers on this list.

The HQ-180 is a good performer, but it's not very attractive. My favorite looks-wise and performance-wise is is the SP-400 (love that variable IF bandwidth)

Any Drake is a good bet, as is any TMC GPR-series radio.

Looking forward to the flames!

73 John

> and whatnot, but I have some other questions.
> 1. Ceramic disk caps and "postage stamp" mica caps? Replace
> 'em, or let 'em be?

Let 'em be, unless they're bad

> 2. "Bathtub" caps?

Definitely let'em be. I've yet to see one of these go bad.

> 3. Any ideas on what the impedance of the coax that runs to and
> from the 6 Mc. IF relay is? Does it get leaky over time, and on the
> topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
> Curable?

Believe it's 100 ohm. Wouldn't worry about leakage; the run is so short
it's not gonna matter a bit. We're dealing with fairly high level signals
at this point in the radio. I *think* there's a trap in there somewhere
after the first converter to get rid of the 6 mc bleedthru. Find it and
adjust for min bleethru.

> 4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?

Leave it as is. It should be sensitive enough. If it isn't, then you have
bad bypass caps or an alignment problem.

> 5. Is "No-oxid" really that great of stuff to use?

I use "De-Oxit".

Talking of sleepers - the Racal RA17L takes some beating. Prices here in the UK (depending on source and condition) up to £200 - or $350.
Performance? I was getting a fair signal on a homebrew antenna (100m solid core wire wrapped around a 1.5" diameter 8' long pole) on Radio Australia - in London!

1268. FS: NATIONAL COIL SET 14-A for SW-3's

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-31 21:45:42 UTC
From: WA2BAH@webtv.net
Message-ID: <13200-39AED206-45@storefull-152.iap.bryant.webtv.net>
Source record: 62230

National original coil set 14-A (80 meters) manufactured around 1932 for SW--3 version 1 radios. Will work in all SW-3 models. $60 plus $10 s & h CONUS

LIST OF ITEMS FOR SALE: http://sdstudio.freeyellow.com/page3.html

1269. FS/FT: AN/GRC9A and p.s.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-08-31 22:17:30 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <39AED97A.678F1EC4@erols.com>
Source record: 62218

I have for sale one AN/GRC-9A transmitter/receiver, a DY-105B power supply, the hard-to-find CD-1086 interconnect cable, and technical documentation. It is a working unit but, in all candor, will need a tx alignment, per the manual. It currently receives and transmits. The R/T unit is in pretty good shape (no cover, but has cage, intact). P.S. is in very excellent condition. Reason for "divesting?... I found/bought a virtually NIB GRC-9A with the ac and dc power supplies, antennas, and accessories. (Only took 30 years to find one like this!!). The above must be picked up in/around the MD/DC/NoVa area and/or I'll bring it to the Bowie (nee Gaithersburg) hamfest.
Open to offers. Looking for the following: HT-20, HQ-160, ART-13, GRR-5, BC-342, or other military radios. Thanks

True Anchor Receiver

My first receiver as a kid of 14 (ex W6LGS), out of the crate, US Navy RAL7 w/separate p.s.

Super regenerative receiver at 110 lbs.
Power Supply at 44 lbs.
Connecting cable at approximately 5 lbs.

Now that's an ANCHOR!!!

_.. ._ ..._ .

I have a Harris RF-590, as well as a Harris RF-550. The 550 has an RF amplifier that the 590 doesn't and is more sensitive. However if you want real sensitivity, a Sylvania R1414/URR beats anything that I've used. The noise figure runs about 7 dB, a good 8 dB better than Harris. The Sylvania is solid state, analog tuned (no synthesizer noise) and has four tuned circuits before the first mixer.

> the best Hallicrafters the SX-28

Well, "best" is one of those highly charged terms that folks are not likely to agree about. I suspect you'll get a wide range of answers to this question.

The SX-28 is a fine set and might win in the "best beloved Hallicrafters" category, but I doubt it would beat my SX-88 in a head-to-head (should that be dial-to-dial?) performance challenge. The SX-42 is another fine Hallicrafters receiver, a few years newer than the SX-28 and with FM capability to boot.

This is a pretty subjective topic. If you want fine overall reception plus juicy push-pull audio stage, then any of those three receivers will fill the bill, and the average slob would be hard-pressed to notice big performance differences. Of the three, the SX-42 is comparatively plentiful and usually not expensive. The SX-88 is scarce and thus very expensive. None of them is an easy receiver to overhaul (cramped layout).

It depends a LOT on what you're looking for . . .

Thanks for the tips!

Actually, I'm surprised regarding your comments about this being a kit. If so, mine was built extremely well with nary a cold solder joint in site! I also learned that the company that actually produced these was called Trio, or at least some of them were marketed with this name on them.

Cheers!

The MACKAY 3010C?????!!!!

If I remember my model numbers correctly, that's the Mackay receiver
with the two color "tape" dial.

In fact that tape dial was a nightmare in heavy use with sprocket hole
wear and inaccuracy.

Also, that front end tube (frame grid?) was fragile as hell.
Any lightning strike within a half mile or so would take it out,
as would the RF from any nearby transmitter. In commercial useage,
I had to bypass that front end stage several times due to running out
of spare tubes.

Seems to me that overload resistance or dynamic range was also
poor. If that receiver was anywhere near a 50KW AM bcst station,
forget it.

I used these receivers at sea as a Ship's Radio Officer and was
never impressed. Whenever my ship docked in the Port of New York
area, those 50kw transmitters in the New Jersey meadowlands made the
receiver useless. The only impressive thng about this receiver was
its heavy, cast chassis construction.

The later Mackay receivers such as the solid state 3020, 3030 and
3040's were, and are, very impressive. They solved the front end
overload problem with a built in tunable preselector/filter.

Just my $.02

Doug/WA1TUT

From: sgpnet@earthlink.NET (Scott Goldstein)
Subject: Best of the Boat Anchors. The Winners are....

Everyone, please forgive me if this is a well worn topic. I just joined
the list and am pretty much of a novice at , to coin a word, boatanchoring.

I have been told the best Collins is the 390, the best Hallicrafters the
SX-28, Hammalund and Racal???. But this may be way off the mark.

So if this isn't asking too much, I'd to find out the top 2 or 3 boatanchor
receivers from each major company.

Also I'd like to know if there are any swap meets, ham fests, etc. in the
Southern Calif area so that I can see and purchase one of these great old rigs.

cheers
Scott

the R-390 or 390A gets my vote. 75A-4, 51J-4 as well. Not so big in size are
the Collins S-Line series all top runners, Drake B-C line as well if on a
budget. Had them all, Hali, National, Hammarlund, Racal. They are all somewhat
fair to good but the Collins beats them all. That is why they are so up there
in price. Best of the best though is the Harris RF-590A... Not quite a boat as
it is solid state but hands down can hear down to the galactic noise
floor..... just my opinion. There will be many who agree and many who do
not...p

I think we have left out one of the best!! That being the ITT MacKay
3010C receiver. This general covers receiver will run circles around a
R-390 and 51J4, I know since I have both of them. This radio is one of
the sleepers out in the market place. Designed for marine service it has
one of the best sensitivity rating going, that being .11 UV. most radio
are .15 and up. IM distortion and 2nd and 3rd order products just don't
exist. The AM audio is fantastic and SSB reception is wonderful. Under
the hood we have , what else, 2 collins mechanical filters, same ones as
used in the 75A-4 another great radio! And of course each his own! When
it comes time to pick it up and take it to the beach or park, well my
Sony ICF-6800W or CRF-1 radio is the best.. Enjoy!!!!

Talking of sleepers - the Racal RA17L takes some beating. Prices here in the
UK (depending on source and condition) up to £200 - or $350.
Performance? I was getting a fair signal on a homebrew antenna (100m solid
core wire wrapped around a 1.5" diameter 8' long pole) on Radio Australia -
in London!

True Anchor Receiver

My first receiver as a kid of 14 (ex W6LGS), out of the crate, US Navy RAL7
w/separate p.s.

Super regenerative receiver at 110 lbs.
Power Supply at 44 lbs.
Connecting cable at approximately 5 lbs.

Now that's an ANCHOR!!!

Collins: R-390 (not "A"), R-391, 651S-1
National: HRO-500, HRO-60, HRO-50
Hallicrafters: SX-73, SX-88, SX28
Hammarlund: HQ-180, PRO-310, SP-400
Drake: R-4/C, 2A/B/C, 1A
TMC: GPR90/91/92

My criteria in the above list is build quality, audio quality, ease of
service, electronic performance (sensistivity, stability, etc), usability,
and looks (not necessarily in that order).

The 51J/75A series has horrible audio and crummy front end performance. The
51S-1 isn't a lot better.

Any non-HRO National is definitely a step down performance-wise from the HRO
series.

I think the SX-88 is vastly over rated - nothing much more than a bigassed SX-100 with a bit better stability. The SX-28 is there because it is, bar none, the best looking receiver ever. Performance is adequate by today's standards but doesn't begin to come close to the rest of the receivers on this list.

The HQ-180 is a good performer, but it's not very attractive. My favorite looks-wise and performance-wise is is the SP-400 (love that variable IF bandwidth)

Any Drake is a good bet, as is any TMC GPR-series radio.

Looking forward to the flames!

73 John

Collins?? National?? Hallicrafters?? Hammarlund?? Drake?? Flame, flame, flame!! These'll just drag under any force of consequence. Now the Dor-Mor Pyramid, for bottom penetration and sheer holding power, is hard to. . . .

Oh, wait. This isn't the sailing newsgroup. Sorry.

I have a Harris RF-590, as well as a Harris RF-550. The 550 has an RF amplifier that the 590 doesn't and is more sensitive. However if you want real sensitivity, a Sylvania R1414/URR beats anything that I've used. The noise figure runs about 7 dB, a good 8 dB better than Harris. The Sylvania is solid state, analog tuned (no synthesizer noise) and has four tuned circuits before the first mixer.

Subject: Best of the Boat Anchors. The Winners are....

Scott Goldstein <sgpnet@earthlink.NET> wrote in message news:4.3.2.7.2.20000831081021.00b463d0@vipmail.earthlink.net...
> the best Hallicrafters the SX-28

Well, "best" is one of those highly charged terms that folks are not likely to agree about. I suspect you'll get a wide range of answers to this

question.

The SX-28 is a fine set and might win in the "best beloved Hallicrafters" category, but I doubt it would beat my SX-88 in a head-to-head (should that be dial-to-dial?) performance challenge. The SX-42 is another fine Hallicrafters receiver, a few years newer than the SX-28 and with FM capability to boot.

This is a pretty subjective topic. If you want fine overall reception plus juicy push-pull audio stage, then any of those three receivers will fill the bill, and the average slob would be hard-pressed to notice big performance differences. Of the three, the SX-42 is comparatively plentiful and usually not expensive. The SX-88 is scarce and thus very expensive. None of them is an easy receiver to overhaul (cramped layout).

It depends a LOT on what you're looking for . . .

The MACKAY 3010C?????!!!!

If I remember my model numbers correctly, that's the Mackay receiver
with the two color "tape" dial.

In fact that tape dial was a nightmare in heavy use with sprocket hole
wear and inaccuracy.

Also, that front end tube (frame grid?) was fragile as hell.
Any lightning strike within a half mile or so would take it out,
as would the RF from any nearby transmitter. In commercial useage,
I had to bypass that front end stage several times due to running out

of spare tubes.

Seems to me that overload resistance or dynamic range was also
poor. If that receiver was anywhere near a 50KW AM bcst station,
forget it.

I used these receivers at sea as a Ship's Radio Officer and was
never impressed. Whenever my ship docked in the Port of New York
area, those 50kw transmitters in the New Jersey meadowlands made the
receiver useless. The only impressive thng about this receiver was
its heavy, cast chassis construction.

The later Mackay receivers such as the solid state 3020, 3030 and
3040's were, and are, very impressive. They solved the front end
overload problem with a built in tunable preselector/filter.

Just my $.02

Doug/WA1TUT

> "CW and boatanchors: Isn't life too short for anything else?"

Of course!

3579.545 is always good, in darkpath and winter. Folks have tended
to have drifted down to 3578, because of 1AW skeds, and that is fine.
Anywhere in the ballpark or the bandwidth of yer tin cans will do.

The generic most recently agreed upon Boatanchors and Glowbugs CW
meeting places are:

QTR QRG

10120khz 0100Z
7147khz 0200Z
3578khz 0300Z
1803khz 0400Z

although some show up anytime on the above QRG's. In winter we mostly
inhabit 3578 and 1803, which is prime Hartley/regen territory. Folks show

up usually on bugs or on straight sendin' irons running everything from
1920`s Hartleys to anything what glows in the dark. If ye can`t muster
up a currently running Boatanchor or Glowbug rig, then muster up whatever
ye canst muster! Class B waves be not allowed.

Call..... CQ BA CQ BA DE yourcall K

a few rounds, if noone is there, or just jump into the roundtables.
These are not nets, but just friendly roundtables.

So, grapples ye up yer tin cans atops yer noggins, an' a'readies ye
yer keys at the fore, an' stokes ye up yer firebottles!

The original reason was the commonality of 3579R545 rocks for the
glowbug gear. In summer the band can be hectic there with the hash,
but, in winter, it really does not bother a good setup. Many of
the folks who have hash problems (mebbie chuck the poor junk tv stuff
and get the XYL a good set?) have moved down to 3578R0 which is fine.
The rest of us inhabit 3579R545 and keep on truckin'. Funny, tho,
the hash doesn't bother my really ancient gear like Hartleys and
regens. Mebbie it is the too modern ham gear with the RF stages
run too wide open for real Boatanchoring or Glowbugging use?.....(:+}}...

Subject: FA: Broadcast Audio Compressor/Limiter

This Professional Audio Compressor/Limiter is perfect for any vintage AM audio chain. If you want to beef up your Boatanchor Transmitter Audio to have punch and apparent loudness this is for you. Remember how some signals sound weak and unlistenable? Others, on the otherhand, are a pleasure to listen to. It is always commented the fact, "You have Broadcast Quality Audio!" This is part of the reason why it can be possible. This Pacific Recorders Limiter is a Broadcast piece of audio equipment, you can use on you BA rig.

If you don't need this mention it to one of your Ham friends! The reserve is a fair one for this quality item.

I have for sale one AN/GRC-9A transmitter/receiver, a DY-105B power
supply, the hard-to-find CD-1086 interconnect cable, and technical
documentation. It is a working unit but, in all candor, will need a tx
alignment, per the manual. It currently receives and transmits. The
R/T unit is in pretty good shape (no cover, but has cage, intact). P.S.
is in very excellent condition. Reason for "divesting?... I
found/bought a virtually NIB GRC-9A with the ac and dc power supplies,
antennas, and accessories. (Only took 30 years to find one like
this!!). The above must be picked up in/around the MD/DC/NoVa area
and/or I'll bring it to the Bowie (nee Gaithersburg) hamfest.
Open to offers. Looking for the following: HT-20, HQ-160, ART-13,
GRR-5, BC-342, or other military radios. Thanks

From: "Bill Gittere" <wgittere@buffnet.net>
Subject: FS: Rohn Freestanding Tower plus much more

For Sale: A beautiful Rohn freestanding 64 foot tower. It is the BX model and is in perfect condtion. It is located in Williamsville, NY (near Buffalo) and is still standing. Buyer will have to take down and remove. It belongs to the widow of K2BD and she will let it go for $300. This is a real steal but she would like it removed. Also included is an EZ way 45 foot tower on a wonder groundpost. The groundpost is cemented in and probably would not be removeable. The last item to go with the package is a three element tribander. I think it is a TA-33.

This is a package deal and nothing will be separated. The purpose is to have all of the antennas removed before winter.

Please contact me by e-mail or call 716 741 3776

> http://www.megacycles.com

That is the classic RCA high powered xtal oscillator set.

Several of the BA/GB folks have built them and run them. They work
just fine. Be very, very careful around the high voltages used, and
always key by relay. The lamp in the xtal line prevents xtal burnout,
but even then, don't use tiny xtals but good healthy sized ones (such
as FT-171 or R1 sizes) if you can.

Check http://www.mines.uidaho.edu/~keng/sch/ for more details.

Good Luck

From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Subject: Kenwood 9R-59D help

I built one a few years (decades!) ago. Bought it while on R&R in Tokyo. I thought I'd test the radio out in the hotel, and was I surprised; not only was it a kit, but the instructions were all in Japanese. It took only a couple of nights work to build on a vacant bench in our avionics shop, though.

Alignment is straightforward, really. If the set is on frequency, all you need do is peak the high end antenna and RF stage caps on the CB or ten meter band and the coil on the low end. It make take a couple of iterations to get this in there,. And be wary of peaking on images; with a 455 KHz IF you will hear CB images around 28 MHz.

Cortland

Thanks for the tips!

Actually, I'm surprised regarding your comments about this being a kit. If so, mine was built extremely well with nary a cold solder joint in site! I also learned that the company that actually produced these was called Trio, or at least some of them were marketed with this name on them.

Cheers!

Subject: Overhauling an SX-73

Thanks to everybody who responded to my question earlier about
HQ-110 vs. SX-73. From the subject line, you can guess what I
decided to do. I've gotten enough wisdom from this list to get
through cleaning all the contacts/controls and replacing PS filters
and whatnot, but I have some other questions.
1. Ceramic disk caps and "postage stamp" mica caps? Replace
'em, or let 'em be?
2. "Bathtub" caps?
3. Any ideas on what the impedance of the coax that runs to and
from the 6 Mc. IF relay is? Does it get leaky over time, and on the
topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
Curable?
4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?
5. Is "No-oxid" really that great of stuff to use?

Thanks, and have a great weekend.

73 and ZUT,
John WB9OFG

Let 'em be, unless they're bad

> 2. "Bathtub" caps?

Definitely let'em be. I've yet to see one of these go bad.

> 3. Any ideas on what the impedance of the coax that runs to and
> from the 6 Mc. IF relay is? Does it get leaky over time, and on the
> topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
> Curable?

Believe it's 100 ohm. Wouldn't worry about leakage; the run is so short
it's not gonna matter a bit. We're dealing with fairly high level signals
at this point in the radio. I *think* there's a trap in there somewhere
after the first converter to get rid of the 6 mc bleedthru. Find it and
adjust for min bleethru.

> 4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?

Leave it as is. It should be sensitive enough. If it isn't, then you have
bad bypass caps or an alignment problem.

> 5. Is "No-oxid" really that great of stuff to use?

I use "De-Oxit".

1292. Re: Best of the Boat Anchors. The Winners are....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-01 15:06:10 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39AFC5A0.331F0ED7@home.com>
Source record: 61995

You are correct about the front end being very sensitive! They have added an AM filter which solves the AM broadcast overload, and make AM listening a charm, even here in San Diego. They changed the tape in later production runs to a very strong fiberglass one, and yes two colors, later model were orange and green, early ones were red and green. As with all models, the latter production runs have improvements. The 3010C has front end overload protection diodes in it! They must have listened to your comments , hi hi..I have only had my 3010C for a few weeks, but love the unusual style. I think with these types of radios it is a combination of style and performance. And of course, to each his own!! My new 75A-4 is on the way, so that should be an interesting radio to try out. I have the 51J-4 but always wanted the ham band only version. These radio are very popular and still get top market dollar. It must be the good economy, but I won't give Bill Clinton any credit for HAM RADIO, hi hi..

Hi Brian,
The HQ-180 does have a product detector; that is one of the
reasons that I wanted that receiver, when I was younger. A great receiver!

Subject: Desolving Corrosion

Hi All,

I have radio I am working on with small, enclosed, switched phone jacks that
are full of green corrosion that is resulting in bad connections across the
switch contacts. The jacks are enclosed and cannot be disassembled and
there is too much crud in there for Deoxidit 5 to take care of. Anybody
know of a chemical bath I can immerse these jacks in to desolve the
corrossion? I have removed them from the radio so immersion is possible.

Thanks,

Rob

From: w1ksz@tiac.net
Subject: FS: VHF/UHF Converters (Sad Cases)

I picked up ("rescued") two converters that some FC has removed the tubes and LO Xtals from (almost).
First, Tapetone XC - 144, 28-30 MHz IF. The FC didn't realize that the LO tube and one LO Xtal are inside, so those are there, but the other tubes (including 417A RF Amp) are missing.

The second one is a Centimeg 432 converter, looks like 10 mtr IF.
No tubes or LO Xtal.
Both are very clean inside, the FC didn't know how to open them up

I guess !!
Interesting pieces from the 60's hey-day of VHF/UHF activity.
I'll pack and ship both for $24 to anyone in CONUS.

Subject: Radio in James Bond Movies

I just viewed a tape of the latest James Bond film, "The World is Not
Enough".
It has scene where at a British Intellegance listening post where they are
intercepting a beacon in Istanbul, Turkey.

I believe the receivers used are Racal RA-17 or RA-117. Does anyone agree
or does anyone have any other information on the receiver model.?

I also believe the same model receivers were used in the listening post
scene
the the first Bond film, "Dr. No".

By the way, I feel "Dr. No" is a much better film than "The World is Not
Enough".

Thanks in Advance

From: "John Black" <johnmblack@earthlink.net>
Subject: Radio in James Bond Movies

I think you're right, they are RA-17's.
Also, I believe in "Diamonds are Forever", Blofeld (sp?) had a Philips
L6X38T large 'transoceanic' style transistor portable on his desk.
Finally, I remember in one of the movies where Bond was on an oil rig (I
think), one of the receivers in the radio room was a Panasonic RF4900.

It's sick to pay attention to the radios when you should be staring at the
T&A, isn't it?

John

I have that same problem, (although there is ample time to look at both). At least the bond movies make a reasonable attempt to display accurate equipment...some movies will try to pass off a stack of CB's or even non-radio stuff as a complex monitoring post (not that I'm knocking CB, radio is radio).

I'm afraid I have plead guilty as well.

The hero or heroine is 'homing in' on the villain by carefully turning a dial and you suddenly realize they are twiddling the front of a BC221 Frequency Meter! Kind of spoils it for me. I do recall the stage show of South Pacific, in London, back in the 1950s had a realistic looking radio set up that swung out onto the stage at the appropriate moment; it definitely included an HRO receiver, but I couldn't tell the model from the balcony!

About 30 years ago visited one of those NORAD (North American Air Defence) holes in the ground centres at North Bay Canada..

While there we (a group of telecommunications managers) were advised that certain 'old' (circa 1950s etc.) equipment was being replaced by more modern equipment; in particular some computer racks, full of tubes/valves and some big screen radar plotter monitors.
When we asked what they would do with such 'old style' equipment the answer was immediate.
"Oh; no problem. Film studios will always take this old stuff for 'space' and sci-fi movies!".
So space movie buffs; be alert! "OK; Boat Anchors to Enterprise. Beam this up."

In the 70s, on Hawaii 5-0, McGarrett was forever talking into his personal police radio during chases, or key moments in a sting, or when the Governor called to check in with the latest interference du jour. I was somewhat less than amused to see him talking into a Shure 527B noise cancelling microphone run into a Masterwork AM/FM/Shortwave portable T/O clone.

Yes, it was more than a bit distracting.

I traded a 1956 Collins 212F Broadcast console to my equipment
supplier in exchange for some processing hardware. He called me and
told me it had been sold...to Hollywood. I was amused to see it in
Howard Stern's movie.

And then realized that my equipment had gone farther in my career
than I had.

What you have there John, is part of the Aircraft Radio Corp. (ARC) "Type 12" equipment. I have all the books and stuff for that equipment. If you'll send me an appropriate large SASE, I'll copy the schematics and installation wiring diagrams for you. FYI, the primary military manual for the series is TM 11-525-25. This manual may be availabe on the market. The factory manuals are the tough ones. With regard to connectors, I regret that I can't let any go, as this time.

Used to work on that stuff. Yeah man. 9001 front ends, crank tuning. We might see one of those in the morning and an ARC-73 in the afternoon. The transmitter was right out of the ARRL pubs, though.

Nowadays the stuff we sweated over is UNDER the tables at flea markets. Sic transit gloria -- and a good thing, too.

From: "D. S. Platt" <jeepp@erols.com>
Subject: WTB: Receiver p.s. xformers

I'm looking to acquire 2 or 3 (if I'm lucky) power transformers with the following specs: 110 VAC primary, 275-0-275 to about 300-0-300 @ about 80ma or better. I suppose single windings for bridge rectification would work OK, too. Filament windings not important, but would be nice to have ones with 5V and 6.3 but.... can't be choosy!! Hi. Buy or trade for NIB 6146W's or 5Y3WGTA's.
Tnx to all.

There are Trio collectors. See

http://member.nifty.ne.jp/hanazawa/radio/9r59ds.html

I also came across an earlier set, a 9R-4, and there was an earlier 6R-4 of the Kasuga Corporation. Kasuga became Trio, which became Trio-Kenwood and then Kenwood.

I have been looking for a 9R59D for a while, but the e-bay prices are too much for me; mine cost only $60 in 1969.

That was a particularly interesting link; especially the restoration photos!

I must be using the wrong search engines; I only found a couple references out there to this receiver, and only in passing.

I picked up my 9R-59D a couple years ago for $20; it's in great shape other than needing the small metal decor inserts for a couple knobs, and the alignment. Almost as good a deal as the Hallicrafters S-40A I picked up for $2 at a thrift store... although that needs a bit more cosmetic work.

Once again, thanks for all your help!

John Erwin

Source record: 62004

Hi John,

Saw that Jose already has sent the manual.
There is a **DS schematic at http://www.sci.fi/~ijl/ . The site is in Finnish, but if
you click english and then click Trio you get the schematic.
The kit mentioned might be a 9R-59 wich is a different radio.
I have worked on two 9R-59D* , each time the mf was misalligned by age.
You can peak it by ear, but better use a generator. You can use the s-meter as indicator for allignment.
With the generator you get better scale callibration.
If the MF is good, you get a bandwith of about 2 kc.
It is a nice radio for the lower frequencies, AM broadcast-DX, etc.
The higher bands are always a problem for scale callibration,
to much frequency per cm (or inch) and not stable enough for SSB.

Watch the condensator over the mains, it exploded in my set.

regards,
Pieter, PA3HDU

SPEED-X semi-automatic, hi-speed telegraph key (bug) model 515.
Manufactured by Les Logan Co., San Francisco.
It appears to be NIB and unused. It is mounted on the original piece of wood, cut to fit the bottom of the box. It appears to have never been removed form that base. The original instruction sheet is included which bears a date of September 15, 1941.

1314. Heath SB-401 Power Transformer Info Wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-02 01:23:32 UTC
From: Douglas Snowden <snowden@peoplepc.com>
Message-ID: <39b0554e@flexnet239.uunt.net>
Source record: 62015
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have an old xfmr from (I think) an SB-401 transmitter. I want to use it to build a power supply. Can someone help me with the voltage outputs? To verify that this is what I have, the number on it is 54-198 and 10977315. The wire colors are somewhat difficult to tell what they are (probably faded. They look like:

Black
Yellow/Black
Red
Red/Yellow
Blue
Yellow/Red
Orange
Green
Yellow
Green/Yellow
Red/Black
Green/Black.

It looks like the black and the yellow/black are primary. I looked in an old handbook
to see what the standard colors are, and most of these are not mentioned.

Thanks in advance,

Doug

1324. HELP... can someone ID this Heathkit meter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-02 02:40:08 UTC
From: k5dh@qsl.net
Message-ID: <cMZr5.2028$gq.24607@read1.centurytel.net>
Source record: 62029
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a plate current meter from a 1950s Heathkit transmitter
I *think* it's from a DX-35, but I'm not sure. Can one of you
tell me which rig it's out of? Here's the link...

http://www.qsl.net/k5dh/images/meter.jpg

The caption reads D.C. MILLIAMPERES
The top scale reads 0-50-100-150 (definitely plate current)
The bottom scale reads 0-2-4-6 (probably grid current)
The "Heathkit" name is written in their typical 1950s script

Sorry for the blurry picture. I had the meter laying on the
bed of my scanner (which is a $99 cheapie!).

Thanks and 73,
Dean, K5DH

I don't think it's from a DX35. More likely from an AT-1.

There was a good looking one on e-bay today. It's gone now and it did need some electrical work. Cosmetically it looked great and it's a fairly simple rig to fix electrically.

I don't know what it finally sold for. Last I saw it was something like a $140.

I've seen a few bargains (not many) and some real "rust buckets" that will take months to completely recondition into half way decent rigs that went for rather outrageous prices.

Then there have been a few that were real jewels, but the collectors will make those pretty much unaffordable to the average ham.

There is a *mint* SX-100 on there and I'd bet that one goes for a "lot". The thing has a week and a half to go and the price is already being bid up quite high. However to those who can afford it, that one is probably worth it.

There are some other rigs advertised as mint where the pictures are obviously retouched (not very skillfully either) to the point where the retouching is obvious.

Subject: Best of the Boat Anchors. The Winners are....

You are correct about the front end being very sensitive! They have
added an AM filter which solves the AM broadcast overload, and make AM
listening a charm, even here in San Diego. They changed the tape in
later production runs to a very strong fiberglass one, and yes two
colors, later model were orange and green, early ones were red and
green. As with all models, the latter production runs have improvements.
The 3010C has front end overload protection diodes in it! They must have
listened to your comments , hi hi..I have only had my 3010C for a few
weeks, but love the unusual style. I think with these types of radios it
is a combination of style and performance. And of course, to each his
own!! My new 75A-4 is on the way, so that should be an interesting radio
to try out. I have the 51J-4 but always wanted the ham band only
version. These radio are very popular and still get top market dollar.
It must be the good economy, but I won't give Bill Clinton any credit
for HAM RADIO, hi hi..

I took a look at the R-107 picture on this site. The claim is that it has
not been modified - however there is a wacking great meter at the top of the
front panel. Not original according to all the data I have on the
set.....looks like the favourite amateur mod to me (I had one too a while
back).

The price is interesting too. $530 - hmmm, bit of mark up on the typical
price here of $60 - 100, isn't it???
So, shipping a monster of this weight across the ocean is going to cost a
bit - it cost me $1.21 per lb to ship stuff from Fair Radio last year to UK,
so shipping should be about $150, when its properly crated up. Looks like a
>100% mark up to me. What was that about not ripping anyone off??

From: "Roger Halstead"
Subject: Hallicrafters FPM-300

There was a good looking one on e-bay today. It's gone now and it did need
some electrical work. Cosmetically it looked great and it's a fairly simple
rig to fix electrically.

I don't know what it finally sold for. Last I saw it was something like a
$140.

I've seen a few bargains (not many) and some real "rust buckets" that will
take months to completely recondition into half way decent rigs that went
for rather outrageous prices.

Then there have been a few that were real jewels, but the collectors will
make those pretty much unaffordable to the average ham.

There is a *mint* SX-100 on there and I'd bet that one goes for a "lot".
The thing has a week and a half to go and the price is already being bid up
quite high. However to those who can afford it, that one is probably worth
it.

There are some other rigs advertised as mint where the pictures are
obviously retouched (not very skillfully either) to the point where the
retouching is obvious.

From: "Douglas Snowden"
Subject: Heath SB-401 Power Transformer Info Wanted

I have an old xfmr from (I think) an SB-401 transmitter. I want to
use it to build a power supply. Can someone help me with the
voltage outputs? To verify that this is what I have, the number on
it is 54-198 and 10977315. The wire colors are somewhat difficult
to tell what they are (probably faded. They look like:

Black
Yellow/Black
Red
Red/Yellow
Blue
Yellow/Red
Orange
Green
Yellow
Green/Yellow
Red/Black
Green/Black.

It looks like the black and the yellow/black are primary. I looked in an
old handbook
to see what the standard colors are, and most of these are not mentioned.

Thanks in advance,

Doug

From: k5dh@qsl.net (Dean Hemphill, K5DH)
Subject: HELP... can someone ID this Heathkit meter?

I have a plate current meter from a 1950s Heathkit transmitter
I *think* it's from a DX-35, but I'm not sure. Can one of you
tell me which rig it's out of? Here's the link...

http://www.qsl.net/k5dh/images/meter.jpg

The caption reads D.C. MILLIAMPERES
The top scale reads 0-50-100-150 (definitely plate current)
The bottom scale reads 0-2-4-6 (probably grid current)
The "Heathkit" name is written in their typical 1950s script

Sorry for the blurry picture. I had the meter laying on the
bed of my scanner (which is a $99 cheapie!).

Thanks and 73,
Dean, K5DH

There are Trio collectors. See

http://member.nifty.ne.jp/hanazawa/radio/9r59ds.html

I also came across an earlier set, a 9R-4, and there was an earlier 6R-4 of the Kasuga Corporation. Kasuga became Trio, which became Trio-Kenwood and then Kenwood.

I have been looking for a 9R59D for a while, but the e-bay prices are too much for me; mine cost only $60 in 1969.

Subject: Kenwood 9R-59D help

That was a particularly interesting link; especially the restoration photos!

I must be using the wrong search engines; I only found a couple references out there to this receiver, and only in passing.

I picked up my 9R-59D a couple years ago for $20; it's in great shape other than needing the small metal decor inserts for a couple knobs, and the alignment. Almost as good a deal as the Hallicrafters S-40A I picked up for $2 at a thrift store... although that needs a bit more cosmetic work.

Once again, thanks for all your help!

John Erwin

From: Pieter Lamers
Subject: Kenwood 9R-59D help

Hi John,

Saw that Jose already has sent the manual.
There is a **DS schematic at http://www.sci.fi/~ijl/ . The site is in Finnish, but if
you click english and then click Trio you get the schematic.
The kit mentioned might be a 9R-59 wich is a different radio.
I have worked on two 9R-59D* , each time the mf was misalligned by age.

You can peak it by ear, but better use a generator. You can use the s-meter as
indicator for allignment.
With the generator you get better scale callibration.
If the MF is good, you get a bandwith of about 2 kc.
It is a nice radio for the lower frequencies, AM broadcast-DX, etc.
The higher bands are always a problem for scale callibration,
to much frequency per cm (or inch) and not stable enough for SSB.

Watch the condensator over the mains, it exploded in my set.

regards,
Pieter, PA3HDU

Since many of you are into land-mobile radio
professionally, here is a URL for a job opening
for a Communications Technician with
City of San Jose in our Communications
Maintenance Division:

http://www.ci.san-jose.ca.us/hum_res/jobs/ctr.htm

Yeah, I know this is off-topic, however us techie-types
hang-out here and what better place for someone into
land-mobile radio to find out about a job opening
that pays up to $68K/Year at top-step ??

Cheers ..

Trish

KP-81 or KE-93? I'd like to find a KP-81, not that I could afford it. I suspect you are looking for a KE-93, if you are reproducing a mobile configuration. Pretty rare, both of them.

Finnish,

Thanks for the excellent information Peter; I did get that link. I saved your information regarding the tune-up tips; I'll be needing all the information when I tackle the job this winter. I've found out that the 9R-59D was better made than the "DS", which apparently was a later "economy" version. I have a few different versions of the schematic but I haven't found out all the differences yet. It looks like Jose's "DE" manual and schematic matches my set the best; I also see that somebody already installed the 0A2 voltage regulator and crystal calibrator circuit mentioned in the manual. I can see that these radios were fairly popular when new! I'm looking forward to getting this machine all tuned up; it already outperforms several other solid-state radios that I have.

Once again, thank you!

KP-81 or KE-93? I'd like to find a KP-81, not that I could afford it. I
suspect you are looking for a KE-93, if you are reproducing a mobile
configuration. Pretty rare, both of them.

Decommissioning (junking) an operating 531 Tektronix Scope. If you have a use for the Type 53/54C dual channel Plug In and/or most of the tubes (CRT burned, so not usable - keeping 5 or 6 tubes that I can use as spares in other equipment), drop me a line. Plug in functions fine except for one channel's variable amplitude control.

$15 shipped for the plug-in
$20 for plug-inwith the 531 tube pulls included

Regards, Bob

There are lots of possibilities...from the tube, to the PS, to dried out caps and leaky coupling caps.

If replacing the tube doesn't get it, I'd put a scope on it and look for the source.

Subject: FA: Professional Broadcast "AM" Mic Limited/Compressor

PACIFIC RECORDERS AM MULTILIMITER
Perfect for your Amateur Radio Vintage AM Station!

Bid on this Professional Pacific Recorders "AM" Compressor/Limiter! This is the perfect audio processing item for any AM Boatanchor Station. The Multilimiter is completely adjustable and is specifically designed to deliver clean, clear audio, while maintaining "loudness," without overmodulation. Pacific recorders equipment is the premier producer of Broadcast gear used by most stations today, who want to use the very best and most durable equipment made.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=424259485

Low reserve of $500 for this item which would sell new for much, much more if you were to buy one new today from Pacific Recorders or Orban.

Check out my other auctions for VHF/UHF, QRP and VHF equipment.

Subject: FS: R-390A Audio Chassis $50 plus shipping

I have an audio chassis for the R-390A for sale. It was manufactured by Motorola, DWG No. 3O1E401, Order No. 14385-PC-58-A1-51, Serial Number 6317. I purchased it some time ago because I was going to modify it for the "Real Audio" mod. Well, I'm cleaning out the shack, and I have too many projects and not enough time. This one will have to go. The audio chassis

has all the electrolytics, but NONE of the tubes. The tubes needed are the OA2, 2x 6AK6, 2x 5814A. The chassis looks good and if you'll buy it, I'll send you a copy of the "Real Audio" modification.

The price is $50 plus shipping from the Chicago area.

From: mailfrmpa@aol.com (MailfrmPA)
Subject: Help w/SX-101A RX Problem

My SX-101A has developed a problem. At first I thought it was just
"motorboating" in the audio, but after listening more closely I noticed that it
does not occur without a signal present, no matter how far the audio gain is
advanced. Most notable on CW and SSB as a pulsation, later as if frequency was
changing. On AM it is not noticeable (probably because of the wider filter
bandwidth) without carefull listining, then I detect a rythmic pulse in the
audio, as if a string of dits were being sent, and just faintly blanking the AM
station.

At present I am suspecting V8 (6SC7), which is the audio amp and BFO tube. I base this on thinking that the BFO has become unstable. The SX-101 uses DSB for AM.

Comments?

From: "Roger Halstead" <rdhalste@tm.net>
Subject: Help w/SX-101A RX Problem

There are lots of possibilities...from the tube, to the PS, to dried out caps and leaky coupling caps.

If replacing the tube doesn't get it, I'd put a scope on it and look for the source.

Subject: microphones FS

I have too many microphones. Someone else could
get better use from them.

Here is what is available:

Hi Z hand mic. Front says "General Electric"
back says "Shure Brothers". Relatively small, but
rugged and heavy duty. Looks close to new.
Grayish brown color. No connector. $ 25

Astatic Hi Z, Model 400 hand mic. Black in color.
White PTT button. Great condition. Presently
has 1/4 inch stereo plug. $ 25

Midland 70-2303 dynamic hand mic. Black in
color. Slightly larger than the 2 listed above.
New. Presently has 4 pin connector. $ 25

Low Z mic with TT Pad on the back. I think it
is CES, but can not find CES written on it. Black.
Presently has 4 pin connector. $ 40

D-104 "Lollypop" Hi Z desk mic. This one has
the round chrome head and the six inch long
chrome tube to connect to the mic base, but no
base. On-off switch below the head. $25

Kenwood SMC-30 speaker mic for use with TH-21 /
31 / 41 series of HTs and other Kenwood HTs.
Good shape for $25

Prices do not include shipping from Florida.

Thanks.

From: Ron Ostman <w0nyq@minntaccdp.com>
Message-ID: <8p41a0baj1@news.spacestar.net>
Source record: 61900

Yes, a battery charger! I have no idea what this was for but it appears to be a late 40's or early 50's vintage 6V battery charger. It works and has appears to be all original. It is
3-1/2" wide by 6-1/2" high and 4-1/2" deep. It can be hung on the wall with a keyhole slot and has 2 cords and 2 slide switches on the front. It has "the hallicrafters co." on the front in the same script as found on S-38 receivers, etc. Switches are are labelled "High Charge/Low Charge" and "On/Off". Maybe it was for portable radio batteries??

$20.00 plus shipping

Sorry if this is off-subject, but maybe some Hallicrafters guy would be interested in this?

==========
HH Scott was a different company. EH Scott produced large tube-type
radios with chrome chassis and lots of tubes. HH Scott came along
later.

We know eBay is expensive, and at the last 2 hamfests I attended, most of what I saw was eBay pricing!

But this weekend my wife and I were doing some garage sale-ing, when we drove up to a place that had a Hallicrafters R-46 sitting on the table. Gut had been using it with a radio in his garage, but since it had low output, replaced it with an old stereo. So I bought a very nice speaker for $10.00.

As the conversation progressed about old radios and such, I learned that granpa's old stuff was in the basement, but too heavy to drag upstairs! So we went to look. A sale did not ensue(but I left my QSL), as he wasn't sure about parting with it just yet. But I did get a bunch o'tubes and such, all at bargain prices. My best buy since last summer, when I found a Heathkit SA-2060A tuner for $25.00.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=424259485

Bid on this Professional Pacific Recorders "AM" Compressor/Limiter! This is the perfect audio processing item for any AM Boatanchor Station. The Multilimiter is completely adjustable and is specifically designed to deliver clean, clear audio, while maintaining "loudness," without overmodulation. Input impedance is 600 ohms, floating, bridged-T input control, transformer isolated. Input level is -25dBm minimum for 5dB gain. The Maximum output level is +24 dBm. Frequency response on AM is (+/-)1dB, 50Hz-15KHz. Signal to noise ratio is better than 72dB for -20dB input. More specs on auction page. This unit list for $2000+ when new and is a perfect match for any vintage audio chain. Use it with you Johnson, Heath or Collins AM rigs!
It will sell for a $500 reserve. Well worth the price. I've paired down my shack and am no longer operating AM, so it goes with much of the gear.

1422. St. Louis, MO Antique Radio Swap 17 Sept.

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have their fall swapmeet on Sunday, September 17th, 2000.

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is different than our spring Location. Swap begins at 9:00 a.m. The boy scouts will be barbecuing and selling lunch. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the Legion Hall parking lot. In case of inclement weather, swap will be held inside the Legion Hall. We'll do it rain or shine!

No Admission Fee. The swaptable fee is $5.00 for Antique Radio Collectors & Historians club members or $10.00 for non-members. Please bring your own swaptable.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map. Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

And ya just had to rub our noses in it, didn't ya! <Grin> Good for you! I HAVE, however, found some awesome deals on eBay...the trick is to find someone who doesn't know what they have. I know this is off topic, 'cuz it wasn't a 'boat-anchor', but I bid $500 on an Icom 706 pkg that was misplaced on eBay (i.e. not in Ham Radio). I had just searched on the keywords Icom 706, as I was in the market for one. Well, there was a picture on the auction ad, and I could see an Icom SP-21 and several other items in the pic. I e-mailed the seller and asked what all was included. All he could tell me was that he wasn't a ham, that he had inherited it, and 'everything in the picture' was included. So I got the 706 with seperation cable, the SP-21 filtered speaker, and other 'goodies' for $500!

Geez...a bit long winded tonight, I guess, aren't I??? Anyway, my point is there ARE deals to be had on eBay! Ya just gotta find the proverbial needle in the haystack!

HH Scott was a different company. EH Scott produced large tube-type
radios with chrome chassis and lots of tubes. HH Scott came along
later.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=424259485

Bid on this Professional Pacific Recorders "AM" Compressor/Limiter! This is the perfect audio processing item for any AM Boatanchor Station. The Multilimiter is completely adjustable and is specifically designed to deliver clean, clear audio, while maintaining "loudness," without overmodulation. Input impedance is 600 ohms, floating, bridged-T input control, transformer isolated. Input level is -25dBm minimum for 5dB gain. The Maximum output level is +24 dBm. Frequency response on AM is (+/-)1dB, 50Hz-15KHz. Signal to noise ratio is better than 72dB for -20dB input. More specs on auction page. This unit list for $2000+ when new and is a perfect match for any vintage audio chain. Use it with you Johnson, Heath or Collins AM rigs!
It will sell for a $500 reserve. Well worth the price. I've paired down my shack and am no longer operating AM, so it goes with much of the gear.

From: mailfrmpa@aol.com (MailfrmPA)
Subject: Garage Sales are The Best!

We know eBay is expensive, and at the last 2 hamfests I attended, most of what
I saw was eBay pricing!

But this weekend my wife and I were doing some garage sale-ing, when we drove up to a place that had a Hallicrafters R-46 sitting on the table. Gut had been using it with a radio in his garage, but since it had low output, replaced it with an old stereo. So I bought a very nice speaker for $10.00.

As the conversation progressed about old radios and such, I learned that granpa's old stuff was in the basement, but too heavy to drag upstairs! So we went to look. A sale did not ensue(but I left my QSL), as he wasn't sure about parting with it just yet. But I did get a bunch o'tubes and such, all at bargain prices. My best buy since last summer, when I found a Heathkit SA-2060A tuner for $25.00.

From: foxblaine@aol.com (R. Blaine Fox)
Subject: Garage Sales are The Best!

And ya just had to rub our noses in it, didn't ya! Good for you! I HAVE, however, found some awesome deals on eBay...the trick is to find someone who doesn't know what they have. I know this is off topic, 'cuz it wasn't a 'boat-anchor', but I bid $500 on an Icom 706 pkg that was misplaced on eBay (i.e. not in Ham Radio). I had just searched on the keywords Icom 706, as I was in the market for one. Well, there was a picture on the auction ad, and I could see an Icom SP-21 and several other items in the pic. I e-mailed the seller and asked what all was included. All he could tell me was that he wasn't a ham, that he had inherited it, and 'everything in the picture' was included. So I got the 706 with seperation cable, the SP-21 filtered speaker, and other 'goodies' for $500!

Geez...a bit long winded tonight, I guess, aren't I??? Anyway, my point is there ARE deals to be had on eBay! Ya just gotta find the proverbial needle in the haystack!

From: "Ron Ostman"
Subject: Hallicrafters battery charger f.s.

Yes, a battery charger! I have no idea what this was for but it appears to be a late 40's or early 50's vintage 6V battery charger. It works and has appears to be all original. It is
3-1/2" wide by 6-1/2" high and 4-1/2" deep. It can be hung on the wall with a keyhole slot and has 2 cords and 2 slide switches on the front. It has "the hallicrafters co." on the front in the same script as found on S-38 receivers, etc. Switches are are labelled "High Charge/Low Charge" and "On/Off". Maybe it was for portable radio batteries??

$20.00 plus shipping

Sorry if this is off-subject, but maybe some Hallicrafters guy would be interested in this?

Subject: St. Louis, MO Antique Radio Swap 17 Sept.

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have their fall swapmeet on Sunday, September 17th, 2000.

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is different than our spring Location. Swap begins at 9:00 a.m. The boy scouts will be barbecuing and selling lunch. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the Legion Hall parking lot. In case of inclement weather, swap will be held inside the Legion Hall. We'll do it rain or shine!

No Admission Fee. The swaptable fee is $5.00 for Antique Radio Collectors & Historians club members or $10.00 for non-members. Please bring your own swaptable.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map.
Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

From: sgpnet@earthlink.NET (Scott Goldstein)
Subject: Best of the Boat Anchors. The Winners are....

Everyone, please forgive me if this is a well worn topic. I just joined
the list and am pretty much of a novice at , to coin a word, boatanchoring.

I have been told the best Collins is the 390, the best Hallicrafters the
SX-28, Hammalund and Racal???. But this may be way off the mark.

So if this isn't asking too much, I'd to find out the top 2 or 3 boatanchor
receivers from each major company.

Also I'd like to know if there are any swap meets, ham fests, etc. in the
Southern Calif area so that I can see and purchase one of these great old rigs.

cheers
Scott

Subject: Best of the Boat Anchors. The Winners are....

the R-390 or 390A gets my vote. 75A-4, 51J-4 as well. Not so big in size are
the Collins S-Line series all top runners, Drake B-C line as well if on a
budget. Had them all, Hali, National, Hammarlund, Racal. They are all somewhat
fair to good but the Collins beats them all. That is why they are so up there
in price. Best of the best though is the Harris RF-590A... Not quite a boat as
it is solid state but hands down can hear down to the galactic noise
floor..... just my opinion. There will be many who agree and many who do
not...p

I think we have left out one of the best!! That being the ITT MacKay
3010C receiver. This general covers receiver will run circles around a
R-390 and 51J4, I know since I have both of them. This radio is one of
the sleepers out in the market place. Designed for marine service it has
one of the best sensitivity rating going, that being .11 UV. most radio
are .15 and up. IM distortion and 2nd and 3rd order products just don't
exist. The AM audio is fantastic and SSB reception is wonderful. Under
the hood we have , what else, 2 collins mechanical filters, same ones as
used in the 75A-4 another great radio! And of course each his own! When
it comes time to pick it up and take it to the beach or park, well my
Sony ICF-6800W or CRF-1 radio is the best.. Enjoy!!!!

Talking of sleepers - the Racal RA17L takes some beating. Prices here in the
UK (depending on source and condition) up to £200 - or $350.
Performance? I was getting a fair signal on a homebrew antenna (100m solid
core wire wrapped around a 1.5" diameter 8' long pole) on Radio Australia -
in London!

True Anchor Receiver

My first receiver as a kid of 14 (ex W6LGS), out of the crate, US Navy RAL7
w/separate p.s.

Super regenerative receiver at 110 lbs.
Power Supply at 44 lbs.
Connecting cable at approximately 5 lbs.

Now that's an ANCHOR!!!

Collins: R-390 (not "A"), R-391, 651S-1
National: HRO-500, HRO-60, HRO-50
Hallicrafters: SX-73, SX-88, SX28
Hammarlund: HQ-180, PRO-310, SP-400
Drake: R-4/C, 2A/B/C, 1A
TMC: GPR90/91/92

My criteria in the above list is build quality, audio quality, ease of
service, electronic performance (sensistivity, stability, etc), usability,
and looks (not necessarily in that order).

The 51J/75A series has horrible audio and crummy front end performance. The
51S-1 isn't a lot better.

Any non-HRO National is definitely a step down performance-wise from the HRO
series.

I think the SX-88 is vastly over rated - nothing much more than a bigassed SX-100 with a bit better stability. The SX-28 is there because it is, bar none, the best looking receiver ever. Performance is adequate by today's standards but doesn't begin to come close to the rest of the receivers on this list.

The HQ-180 is a good performer, but it's not very attractive. My favorite looks-wise and performance-wise is is the SP-400 (love that variable IF bandwidth)

Any Drake is a good bet, as is any TMC GPR-series radio.

Looking forward to the flames!

73 John

Collins?? National?? Hallicrafters?? Hammarlund?? Drake?? Flame, flame, flame!! These'll just drag under any force of consequence. Now the Dor-Mor Pyramid, for bottom penetration and sheer holding power, is hard to. . . .

Oh, wait. This isn't the sailing newsgroup. Sorry.

I have a Harris RF-590, as well as a Harris RF-550. The 550 has an RF
amplifier that the 590 doesn't and is more sensitive. However if you
want real sensitivity, a Sylvania R1414/URR beats anything that I've
used. The noise figure runs about 7 dB, a good 8 dB better than
Harris. The Sylvania is solid state, analog tuned (no synthesizer
noise) and has four tuned circuits before the first mixer.

> the best Hallicrafters the SX-28

Well, "best" is one of those highly charged terms that folks are not likely
to agree about. I suspect you'll get a wide range of answers to this

question.

The SX-28 is a fine set and might win in the "best beloved Hallicrafters" category, but I doubt it would beat my SX-88 in a head-to-head (should that be dial-to-dial?) performance challenge. The SX-42 is another fine Hallicrafters receiver, a few years newer than the SX-28 and with FM capability to boot.

This is a pretty subjective topic. If you want fine overall reception plus juicy push-pull audio stage, then any of those three receivers will fill the bill, and the average slob would be hard-pressed to notice big performance differences. Of the three, the SX-42 is comparatively plentiful and usually not expensive. The SX-88 is scarce and thus very expensive. None of them is an easy receiver to overhaul (cramped layout).

It depends a LOT on what you're looking for . . .

The MACKAY 3010C?????!!!!

If I remember my model numbers correctly, that's the Mackay receiver
with the two color "tape" dial.

In fact that tape dial was a nightmare in heavy use with sprocket hole
wear and inaccuracy.

Also, that front end tube (frame grid?) was fragile as hell.
Any lightning strike within a half mile or so would take it out,
as would the RF from any nearby transmitter. In commercial useage,
I had to bypass that front end stage several times due to running out

of spare tubes.

Seems to me that overload resistance or dynamic range was also
poor. If that receiver was anywhere near a 50KW AM bcst station,
forget it.

I used these receivers at sea as a Ship's Radio Officer and was
never impressed. Whenever my ship docked in the Port of New York
area, those 50kw transmitters in the New Jersey meadowlands made the
receiver useless. The only impressive thng about this receiver was
its heavy, cast chassis construction.

The later Mackay receivers such as the solid state 3020, 3030 and
3040's were, and are, very impressive. They solved the front end
overload problem with a built in tunable preselector/filter.

Just my $.02

Of course!

3579.545 is always good, in darkpath and winter. Folks have tended
to have drifted down to 3578, because of 1AW skeds, and that is fine.
Anywhere in the ballpark or the bandwidth of yer tin cans will do.

The generic most recently agreed upon Boatanchors and Glowbugs CW
meeting places are:

QTR QRG

10120khz 0100Z
7147khz 0200Z
3578khz 0300Z
1803khz 0400Z

although some show up anytime on the above QRG's. In winter we mostly
inhabit 3578 and 1803, which is prime Hartley/regen territory. Folks show

up usually on bugs or on straight sendin' irons running everything from
1920`s Hartleys to anything what glows in the dark. If ye can`t muster
up a currently running Boatanchor or Glowbug rig, then muster up whatever
ye canst muster! Class B waves be not allowed.

Call..... CQ BA CQ BA DE yourcall K

a few rounds, if noone is there, or just jump into the roundtables.
These are not nets, but just friendly roundtables.

So, grapples ye up yer tin cans atops yer noggins, an' a'readies ye
yer keys at the fore, an' stokes ye up yer firebottles!

The original reason was the commonality of 3579R545 rocks for the
glowbug gear. In summer the band can be hectic there with the hash,
but, in winter, it really does not bother a good setup. Many of
the folks who have hash problems (mebbie chuck the poor junk tv stuff
and get the XYL a good set?) have moved down to 3578R0 which is fine.
The rest of us inhabit 3579R545 and keep on truckin'. Funny, tho,
the hash doesn't bother my really ancient gear like Hartleys and
regens. Mebbie it is the too modern ham gear with the RF stages
run too wide open for real Boatanchoring or Glowbugging use?.....(:+}}...

Subject: FA: Broadcast Audio Compressor/Limiter

This Professional Audio Compressor/Limiter is perfect for any vintage AM audio chain. If you want to beef up your Boatanchor Transmitter Audio to have punch and apparent loudness this is for you. Remember how some signals sound weak and unlistenable? Others, on the otherhand, are a pleasure to listen to. It is always commented the fact, "You have Broadcast Quality Audio!" This is part of the reason why it can be possible. This Pacific Recorders Limiter is a Broadcast piece of audio equipment, you can use on you BA rig.

If you don't need this mention it to one of your Ham friends! The reserve is a fair one for this quality item.

Subject: FS/FT: AN/GRC9A and p.s.

I have for sale one AN/GRC-9A transmitter/receiver, a DY-105B power
supply, the hard-to-find CD-1086 interconnect cable, and technical
documentation. It is a working unit but, in all candor, will need a tx
alignment, per the manual. It currently receives and transmits. The
R/T unit is in pretty good shape (no cover, but has cage, intact). P.S.
is in very excellent condition. Reason for "divesting?... I
found/bought a virtually NIB GRC-9A with the ac and dc power supplies,
antennas, and accessories. (Only took 30 years to find one like
this!!). The above must be picked up in/around the MD/DC/NoVa area
and/or I'll bring it to the Bowie (nee Gaithersburg) hamfest.
Open to offers. Looking for the following: HT-20, HQ-160, ART-13,
GRR-5, BC-342, or other military radios. Thanks

Subject: FS: Rohn Freestanding Tower plus much more

For Sale: A beautiful Rohn freestanding 64 foot tower. It is the BX model and is in perfect condtion. It is located in Williamsville, NY (near Buffalo) and is still standing. Buyer will have to take down and remove. It belongs to the widow of K2BD and she will let it go for $300. This is a real steal but she would like it removed. Also included is an EZ way 45 foot tower on a wonder groundpost. The groundpost is cemented in and probably would not be removeable. The last item to go with the package is a three element tribander. I think it is a TA-33.

This is a package deal and nothing will be separated. The purpose is to have all of the antennas removed before winter.

Please contact me by e-mail or call 716 741 3776

That is the classic RCA high powered xtal oscillator set.

Several of the BA/GB folks have built them and run them. They work
just fine. Be very, very careful around the high voltages used, and
always key by relay. The lamp in the xtal line prevents xtal burnout,
but even then, don't use tiny xtals but good healthy sized ones (such
as FT-171 or R1 sizes) if you can.

Check http://www.mines.uidaho.edu/~keng/sch/ for more details.

Good Luck

Subject: Kenwood 9R-59D help

I built one a few years (decades!) ago. Bought it while on R&R in Tokyo. I thought I'd test the radio out in the hotel, and was I surprised; not only was it a kit, but the instructions were all in Japanese. It took only a couple of nights work to build on a vacant bench in our avionics shop, though.

Alignment is straightforward, really. If the set is on frequency, all you need do is peak the high end antenna and RF stage caps on the CB or ten meter band and the coil on the low end. It make take a couple of iterations to get this in there,. And be wary of peaking on images; with a 455 KHz IF you will hear CB images around 28 MHz.

Cortland

Thanks for the tips!

Actually, I'm surprised regarding your comments about this being a kit. If so, mine was built extremely well with nary a cold solder joint in site! I also learned that the company that actually produced these was called Trio, or at least some of them were marketed with this name on them.

Cheers!

Subject: Overhauling an SX-73

Thanks to everybody who responded to my question earlier about
HQ-110 vs. SX-73. From the subject line, you can guess what I
decided to do. I've gotten enough wisdom from this list to get
through cleaning all the contacts/controls and replacing PS filters
and whatnot, but I have some other questions.
1. Ceramic disk caps and "postage stamp" mica caps? Replace
'em, or let 'em be?
2. "Bathtub" caps?
3. Any ideas on what the impedance of the coax that runs to and
from the 6 Mc. IF relay is? Does it get leaky over time, and on the
topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
Curable?
4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?
5. Is "No-oxid" really that great of stuff to use?

Thanks, and have a great weekend.

Let 'em be, unless they're bad

> 2. "Bathtub" caps?

Definitely let'em be. I've yet to see one of these go bad.

> 3. Any ideas on what the impedance of the coax that runs to and
> from the 6 Mc. IF relay is? Does it get leaky over time, and on the
> topic of the 6 Mc. IF, I get "bleed through" from SWBC at night.
> Curable?

Believe it's 100 ohm. Wouldn't worry about leakage; the run is so short
it's not gonna matter a bit. We're dealing with fairly high level signals
at this point in the radio. I *think* there's a trap in there somewhere
after the first converter to get rid of the 6 mc bleedthru. Find it and
adjust for min bleethru.

> 4. Any suggestions as to a "hotter" tube to put in the 1st RF stage?

Leave it as is. It should be sensitive enough. If it isn't, then you have
bad bypass caps or an alignment problem.

> 5. Is "No-oxid" really that great of stuff to use?

I use "De-Oxit".

Suspect some of those "awesome deals on eBay" are too hot to be peddled locally. The auction sites have become a dumping ground for stolen equipment. While your bargain may or may not have been from an estate, many others aren't. I see a lot of items that probably were ripped off from employers.

I have three complete HF rack mounted receivers. All are working of sorts. One receives the other two have audio and tuning capabilities. These are synthesized radios with memory. They tune up to 30 MHz. AM, CW, USB. very nice plug in boards, but no manual. They could be easily fixed by knowledgeable tech. Want $300.00 for the three plus shipping. You can view at http://albums.photopoint.com/j/viewphoto?u=1082840&a=7995924&p=27828454
I might be interested in trade.

You'll probably get a lot of flack for the subject of this post. Why do you call it "rare?" A mid-'50s portable radio isn't particularly old or rare. Might be nice if it was at least washed of its coating of dirt.

Good luck!

1474. FS: Henry HF amp 2KW+

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-07 19:58:40 UTC
From: Bill Abate <wabate@erols.com>
Message-ID: <qqsfrsobod2qiv57ekk88arsnisa61qu58@4ax.com>
Source record: 61828

An outstanding Henry 2KD-3 amplifier. Ruggedly built pair of 3-500Z's with PI-L output, 80 - 10M. With 150 watts of drive it delivers 1800 to 1900 watts out, key down not PEP! This is a desk top kilowatt with floor mounted power supply. The power supply is extra heavy duty. The plate transformer weighs 38 pounds itself! No series electrolytic capacitors, this supply has a 5 KV oil filled capacitor with choke input. Exceptional protection with a fused meter and over current relay in plate circuit. On the air now. The cosmetics are between an 8 and a 9. Very nice! 120 volts or 240.

I would rather not ship this amp because of the weight. I am located near Philadelphia. Asking $875 or will sell less finals for $775. I have jpg's.

73,

Bill, K3PGB

Yep....sounds more "like" the sort of radio used not by a ship necessarily but by a coast station......which brings up the callsign of a U.S. small coast station.....not sure of USA regs but from my experience was typical of the call signs used by the coast station for tug companies, telephone companies etc etc. A large coast station would have had just a 3 letter callsign.

Source record: 61838

Hello BA Fans,

A feller gave me a power supply that I will use for the HV supply to run my 2 X 813 Mackay Marine transmitter. Wonder if there is anyone who can tell me a little more about this transformer.

It is a Merit Coil & Transformer Co. # 524004. The choke is the same brand name but it's part No. is 56B002. Anyone have any ratings handy for this combo? There is nothing on the transformer or choke saying anything.

The transformer also appears to be 115 AC. I will rebuild the supply and use an auto transformer (variac) on the input so I can get just the right voltage I want.

Since the transmitter is rated to run at around 400 watts out, and my AC supply will be 115, I will not try and push the transmitter to a full KW. Probably would be easy with a pair of 813's, but I doubt it would be needed.

Sure would be nice to at least know what the current rating really is.

73 Jim K7SLI

Subject: Johnson Viking Courier going for?

Hi All,
I have a Johnson Viking Courier with manual and am headed to a hamfest this
weekend. Any guess as to what I should ask for it? It's about a 7
cosmetically. Loads, tunes but not really "tested" in a long time. Want
to start at a fair price but don't want to get laughed at nor give it away.
Thanks for input.

Capitalism at work. If there's a market, the prices will go up.
I bid one time only at my maximum allowed price, and if I'm outbid, I let it
go.
It does take a little restraint, but history shows me, that next time there
will be another chance.

Finnish,

Thanks for the excellent information Peter; I did get that link. I saved
your information regarding the tune-up tips; I'll be needing all the
information when I tackle the job this winter. I've found out that the
9R-59D was better made than the "DS", which apparently was a later "economy"
version. I have a few different versions of the schematic but I haven't
found out all the differences yet. It looks like Jose's "DE" manual and
schematic matches my set the best; I also see that somebody already
installed the 0A2 voltage regulator and crystal calibrator circuit mentioned
in the manual. I can see that these radios were fairly popular when new!
I'm looking forward to getting this machine all tuned up; it already
outperforms several other solid-state radios that I have.

Once again, thank you!

1496. 1940's UK School Reciever

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-08 17:55:14 UTC
From: mike@corn2.freeserve.co.uk
Message-ID: <39b91f8d.916501@news.freeserve.net>
Source record: 61852

On Tuesday next (12th Sept), at my local Auction house there will be auctioned a rare and probably unique reciever.

It was built specifically for UK Primary Schools in the mid to late 40's and was only distributed to them by the UK govt. It was never available for purchase by the general public AFAIK.

Called a Pri/Special Six Reciever and built under contract to the UK Govt./ BBC by "Sound Sales", it is a Long and Medium wave reciever, using Octal and 5 pin valves, built on a steel chassis and housed in a steel "Hammerited" case which is showing slight signs of corrosion due to its being stored in a garage for the last 30 years.
It appears complete, and while it probably does'nt work at the moment there is nothing to prevent a rebuild, probably just replacing the condensers and high value carbon-rod resistors.

The Auctioneers estimate of the "hammer price" is 30 UK pounds, but this could be exceeded by orders of magnitude, depending on interest at the sale.

If you would like me to bid for this article on your behalf then please E-mail me with your maximum bid and I will buy for you at the hammer price.

At the sale there is a 10% commission payable on the fall of the hammer.

The Reciever probably weighs in the region of 50-60 pounds and its dimension is approx 18" cube. While built to withstand school usage it will need careful packaging to ensure safe transportation.

At the same auction sale there are two 1940's, or possibly earlier, crystal sets. They appear to be homebuilt as there are no manufacturers marks visible.

I want to buy a mode switch for a friend of mine that has a TS930. His mode switch is badly worn and they are peculiar to the TS930 and not replaceable with anything else. Anybody got a junker out there with one complete with all the bits?

You might want to go into a company that stocks "Coleman" gas lanterns, look
at their chimneys, buy one and take it to a professional glass cutter, who
will cut and polish it to length. It's an old trick but a goodie! Helluva
lot cheaper too!

I have some of the smaller filters as used in the S-line and would like to adapt 2 of them for a 75A4. Looking at the schematic of both the 'A4 and the 75S-( ) receivers, the circuits are all but identical. If the A4 has the B+ mod, any reason why I can't rig the S-line filter(s) for the 'A4? Thanks

Date: Fri, 08 Sep 2000 17:55:14 GMT
From: mike@corn2.freeserve.co.uk (Mike W)
Subject: 1940's UK School Reciever

On Tuesday next (12th Sept), at my local Auction house there will be auctioned a rare and probably unique reciever.

It was built specifically for UK Primary Schools in the mid to late 40's and was only distributed to them by the UK govt. It was never available for purchase by the general public AFAIK.

Called a Pri/Special Six Reciever and built under contract to the UK Govt./ BBC by "Sound Sales", it is a Long and Medium wave reciever, using Octal and 5 pin valves, built on a steel chassis and housed in a steel "Hammerited" case which is showing slight signs of corrosion due to its being stored in a garage for the last 30 years.
It appears complete, and while it probably does'nt work at the moment there is nothing to prevent a rebuild, probably just replacing the condensers and high value carbon-rod resistors.

The Auctioneers estimate of the "hammer price" is 30 UK pounds, but this could be exceeded by orders of magnitude, depending on interest at the sale.

If you would like me to bid for this article on your behalf then please E-mail me with your maximum bid and I will buy for you at the hammer price.

At the sale there is a 10% commission payable on the fall of the hammer.

The Reciever probably weighs in the region of 50-60 pounds and its dimension is approx 18" cube. While built to withstand school usage it will need careful packaging to ensure safe transportation.

At the same auction sale there are two 1940's, or possibly earlier, crystal sets. They appear to be homebuilt as there are no manufacturers marks visible.

Subject: Help, help

I purchased a Hallicrafters SP 44 Panadapter for what I thought was a good price, only to find that the power transformer smokes. Seems like an internal short on the 200 volt winding. Does any one have a replacement or junker available?

Thanks,
Joe

From: "D. S. Platt" <jeepp@erols.com>
Subject: Info: Collins mech filters (interchangeable?)

I have some of the smaller filters as used in the S-line and would like to adapt 2 of them for a 75A4. Looking at the schematic of both the 'A4 and the 75S-( ) receivers, the circuits are all but identical. If the A4 has the B+ mod, any reason why I can't rig the S-line filter(s) for the 'A4? Thanks

Depends on where you find your R-390s. I've never paid more than a hundred
bucks for any of the ones I've had. I'm personally not too enamoured with
the NC-183D as the front end is very susceptible to cross modulation and
overload when hooked to a decent antenna. THey also lack the stability,
selectivity, dial accuracy, and sheer build quality that a '390 has.

From: <thompson@mindspring.com>
Subject: Electrolytics for Dentron Clipperton L

I have the big brother.. the Dentron DTR 2000L. I had one bad electrolytic
in it and found that the Clipperton L and the DTR 2000L
have the same type. Warning....you can buy replacements but you will not
find the same base. I checked with the manufacturers rep and he found out
that Dentron bought out a special order that some other client failed to
pick up after ordering. This was over 20 years ago.
The base is different from the normal twist base and would require a special
sub chassis to be added. So another Clipperton L or DTR-2000L is
required...maybe a junker. You might also check with Omega Electronics in
North Carolina as he fixes these and may have replacement parts.

From: Charles Days <oldradiodays@mediaone.net>
Subject: Southeastern Mass. Amateur Radio Club Fleamarket Sunday, Sept., 10th,

Hi,

The Southeastern Massachusetts Amateur Radio Association Inc is having
their annual FLEAMARKET of Radio, electronic & computer equipment.

Sunday September 10, 2000, 9 AM to 1 PM.

7 AM is seller setup and it is free!

For more info and a map on-line go to:
http://people.ne.mediaone.net/oldradiodays/other/other.htm

The file is large so the map will print clearly.

Hope to see you there.

Charlie

From: Bob or Chris Balonis <rmborcmb@penn.com>
Subject: Tektronix 53/54C Plug-In, 531 OScope tubes pulls

Decommissioning (junking) an operating 531 Tektronix Scope. If you have
a use for the Type 53/54C dual channel Plug In and/or most of the tubes
(CRT burned, so not usable - keeping 5 or 6 tubes that I can use as
spares in other equipment), drop me a line. Plug in functions fine
except for one channel's variable amplitude control.

$15 shipped for the plug-in
$20 for plug-inwith the 531 tube pulls included

Regards, Bob

1532. BoatAnchor Manual Archive Update

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-09 23:05:44 UTC
From: "Kenneth D. Grimm" <grimm@NOSPAMlynchburg.net>
Message-ID: <a9glrsc8f0bhrf68s8kv6gr354vnsig03v@4ax.com>
Source record: 61886

A series of problems has plagued BAMA recently. The failure of the router near Washington, DC that serves sbc.edu effectively put BAMA out of reach a few days in August. More recently, a problem with the ftp software on the server has allowed users to remain connected...resulting in "hung processes" on the box. With a maximum number of users set at 5, if there are several of the users "still connected", it can become very difficult if not impossible to get through to the ftp site. The hung processes were cleared on Friday morning. However, by Saturday afternoon, the symptoms were back again. We will be working on this one!

On a brighter note...
The following materials have been added to the BoatAnchor Manual Archive, the free cooperative boatanchor manual project at http://bama.sbc.edu

Manual for B&W 5100 transmitter from Don Flenner, W3YCH.
Manual for B&W 51SB sideband adapter from Don Flenner, W3YCH. (This folder now contains the schematic and parts list formerly found in the B&W 5100B folder provided by Chuck Swiger, KB4NEW.)
Manual for Dentron RT-3000 from Ron Biggerstaff, K5BDJ.
Manual for Dentron Clipperton L from Tom Krohn, K3IJ
and Bill Feissner, AI3Q.
Manual for Drake MN-2000 from Ron Biggerstaff, K5BDJ.
Installation and Operation of DX Engineering Speech Processor for T4X from Bob Rainbolt, WB0AUQ.
Schematic for Eddystone EC659 from Alan Bain, M5AIQ.
Schematic for Eddystone EC670 from Alan Bain, M5AIQ.
Manual for Eldico EE-3A Keyer from Don Stalkowski, VE3HUR.
Complete schematic for Hallicrafters HT-37 from Gary Phillips, KA9NZI, added to the HT-37 folder.
Manual for Hallicrafters S-20 from Bob Cole, W4RLC.
Schematic of the original Hallicrafters S-38 from Kevan Coleman, KC7LSP.
Manual for Hallicrafters SX-32 from Bob Cole, W4RLC.
Conversion material and schematic of mil receiver R-45/ARR-7 based on SX-28. Compliments of Ray Colbert, W5XE, Kenneth Colbert, KB5MLY and Brian Hill.
Manual for Hammarlund HQ-145X from Dick Blaney, WB8MHE and Pete Owen.
Manual for Hammarlund HQ-200 from Phil Bartells and Pete Wokoun, KH6GRT.
Additional material on Heath MR-1 from Francis Mauser, WA8SDA.
Partial manual for Heath PS-3 from Garey Barrell, K4OAH.
Mod "Soup up the Heath SB-301 for $7" from Stu Lyon, W6CUX.
Brochures with schematics for Johnson Viking Adventurer,

Johnson Viking Courier, and Johnson Viking Kilowatt from
Don Stalkowski, VE3HUR.
Operating Instructions for Johnson Viking 250-24 SWR Bridge from Don
Stalkowski, VE3HUR.
Manual for National NC-100ASD from Andy Gluis, VK5AAQ.
Manual and materials for National VFO-62 from Bob Cole, W4RLC.
Manual for SBE SB2-LA from Ron Biggerstaff, K5BDJ.
Manual for Stancor ST-202A from Ron Patterson, W6FM.
Manual for WRL Globe Scout from Don Flenner, W3YCH.
Schematic for FL-200B Yaesu-Sommerkamp transmitter from Alan Bain,
M5AIQ.

These new additions plus several hundred other manuals are now
available. Please drop by and download to your heart's content.
While you are waiting for your manual to download, think good thoughts
about the folks who have uploaded the manuals that you find helpful.
Without their willingness to share their manuals, BAMA would not
amount to very much.

If you have a manual that is not found on BAMA that you would be
willing to scan and share with the BA community, please drop me a line
and I'll help you get started.

Thanks again to all of those who support BAMA.

73,

Ken K4XL

My thanks to you Ken.

Today was our annual amateur radio flea market. Of the few items that I did

purchase, one was a Heathkit HO-10 monitor scope. The fella wanted 20 bucks

for it, but after he told me he thought the scope tube was bad, decided I could
have it for 5 bucks. Since I do have a small Heath collection, I brought it home.
Once inside the beast, I found 2 broken wires, a capacitor had unattached itself
on one end, and the focus and horizontal position would not work. Downloaded
the schematic from your site, and 30 minutes later the scope was working great.
Trouble was an open 500K horizontal pot, and an open 3.3 Meg resistor in
the intensity - focus circuit. Without the schematic on your site, I would not
have been able to figure out where the capacitor had be connected, nor where
the 2 wires had been connected.

Thanks again Ken, great site to have in my book marks.

7 3
a happy Reed

Rich, why post five eBay ads when you could combine them together into a single ad? Why post "last day" ads at all? If someone were interested, they would have seen your first ads and have been following the biddings.

Try to be a little more sensitive to those on here who detest auction notices. (Note what eBay writes concerning auction notices posted to newsgroups; even eBay asks its sellers to be sensitive in regards to newsgroup culture.)

73, Jeff KH6O

The VOMAX SBP-3 is an SSB-compatible, instantaneously-acting, peak limiter that exhibits very low distortion, typically 5%. It is used by many of the famous DX'ers and on many DX-peditions. Tests show that the SBP-3 will increase talk power by providing a power gain of between 10 and 12 dB. This unit comes with all documentation and will be a wonderful addition to your hamshack that will provide your audio with the punch it needs to plow through the pileups even if you are not running maximum power. Bid up on this fine unit made by ETO!

Bid on this beautiful LOEWE OPTA TRUXA Model Table Radio! It is in almost perfect condition as you can see in the pictures. It was just taken to a respected radio repair shop in San Francisco and gone through completely. The dial cord was replaced as well as about a dozen leaky caps and all tubes were checked and one was replaced. The total repair cost was a little over $100. This radio works beautifully on all bands! The cabinet is in excellent condition. This radio would be a beautiful compliment to anyone knowing the value of an older German tube receiver.

Hello, I have the following equiptment I'm listing for an email-less friend (KA3BBW) of mine. Everything is in excellent condition and has just been pulled out of storage for the last 13 years. Outside of a little dust that may still be there everything is excellent.Most of the equiptment has their original boxes. All manuals/patch cords, etc. are included. Please emial me directly if you're seriously interested. I'd prefer not to ship but will if necessary. Shipping won't be cheap due to the amount of equiptment involved and the weight of it.
Thank you for reading this and 73.

General Electric MASTR PRO Lo-Band FM rack-mounting base station on 52.525 MHz. - 100 watt output model with commercial 117 volt power supply. It's in good condition and may only need a receive crystal to become fully operational. Ask me for a picture!
It is quite heavy and would be expensive to ship; so I am hoping someone would be interested to make a pickup in the Albany, NY area.
I'm asking $135 - a copy of the manual is included.

From: jvercellino@sprynet.COM (John Vercellino)
Subject: FS: R-390A Audio Chassis $50 plus shipping

I have an audio chassis for the R-390A for sale. It was manufactured by Motorola, DWG No. 3O1E401, Order No. 14385-PC-58-A1-51, Serial Number 6317. I purchased it some time ago because I was going to modify it for the "Real Audio" mod. Well, I'm cleaning out the shack, and I have too many projects and not enough time. This one will have to go. The audio chassis

has all the electrolytics, but NONE of the tubes. The tubes needed are the OA2, 2x 6AK6, 2x 5814A. The chassis looks good and if you'll buy it, I'll send you a copy of the "Real Audio" modification.

The price is $50 plus shipping from the Chicago area.

From: mailfrmpa@aol.com (MailfrmPA)
Subject: Help w/SX-101A RX Problem

My SX-101A has developed a problem. At first I thought it was just
"motorboating" in the audio, but after listening more closely I noticed that it
does not occur without a signal present, no matter how far the audio gain is
advanced. Most notable on CW and SSB as a pulsation, later as if frequency was
changing. On AM it is not noticeable (probably because of the wider filter
bandwidth) without carefull listining, then I detect a rythmic pulse in the
audio, as if a string of dits were being sent, and just faintly blanking the AM
station.

At present I am suspecting V8 (6SC7), which is the audio amp and BFO tube. I base this on thinking that the BFO has become unstable. The SX-101 uses DSB for AM.

Comments?

Subject: Help w/SX-101A RX Problem

There are lots of possibilities...from the tube, to the PS, to dried out caps and leaky coupling caps.

If replacing the tube doesn't get it, I'd put a scope on it and look for the source.

From: "Ken Simpson" <W8EK@fdt.net>
Subject: microphones FS

I have too many microphones. Someone else could
get better use from them.

Here is what is available:

Hi Z hand mic. Front says "General Electric"
back says "Shure Brothers". Relatively small, but
rugged and heavy duty. Looks close to new.
Grayish brown color. No connector. $ 25

Astatic Hi Z, Model 400 hand mic. Black in color.
White PTT button. Great condition. Presently
has 1/4 inch stereo plug. $ 25

Midland 70-2303 dynamic hand mic. Black in
color. Slightly larger than the 2 listed above.
New. Presently has 4 pin connector. $ 25

Low Z mic with TT Pad on the back. I think it
is CES, but can not find CES written on it. Black.
Presently has 4 pin connector. $ 40

D-104 "Lollypop" Hi Z desk mic. This one has
the round chrome head and the six inch long
chrome tube to connect to the mic base, but no
base. On-off switch below the head. $25

Kenwood SMC-30 speaker mic for use with TH-21 /
31 / 41 series of HTs and other Kenwood HTs.
Good shape for $25

Prices do not include shipping from Florida.

Thanks.

I see you resold the items that I returned to you. And I see you are selling a Kenwood TS450 here in the newsgroups and you STILL have NOT refunded my $400.

I called UPS and they say that they have sent you a check out for the claim!

It's funny, when you were selling the items, you answered your phone.

Now I can't get email responses and your phone is busy 7 days a week.

It's a shame I have to post this here in the newsgroups because you just refuse to communicate with me.

I want my money and I want it immediately.

I'm giving you ample chances here before I contact the proper authorities.

Watch out for this name, address and phone # everyone!

Message-ID: <Springmail.105.968597880.0.64711100@www.springmail.com>
Source record: 61762

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=428038742

Do you collect crystals? Then perhaps you'd be interested in this General Electric crystal for 5292.14 kHz. The case is in excellent condition, and the crystal still oscillates. I tested it with my grid dip meter and R-390A to check the frequency accuracy and it's right on. The crystal pins are the same width as those on a FT-243, though they appear to be a little smaller in diameter.

1559. FA: eBay : Heathkit signal tracer model IT-12

Newsgroup: rec.radio.amateur.boatanchors

Source record: 61763

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=428043305

Here's just the piece of gear you need if you enjoy servicing amplifiers or radios, the Heathkit Model IT-12 Signal Tracer.It comes with the two-function probe. The probe has a switch on it that is used to switch a diode in and out of the circuit. That way, you can use the signal tracer to trace signals before the detector stage of your radio, as well as after the detector.Besides giving you an aural indication of the detected signal, it also gives you a visual indication of the signal via the 1625 magic
-eye tube. There are also banana plugs for tapping on another speaker or the output from the internal audio transformer.There is a 1/4" hole drilled in the upper right corner of the back of the cabinet, and the prior owner engraved his or her name on one side of the cabinet (see picture). Other than those two blemishes, the signal tracer appears to be in very good condition. However, like any old piece of electronic gear, I'm selling it "as is", but I will guarantee that i!
!
!
t will not be DOA, and it did function as described when it left my home.

1560. WTB: jack bars and sockets, large

Message-ID: <39bba8f0.983699@news.freeserve.net>
Source record: 61765

Repost:

On Tuesday next (12th Sept), at my local Auction house there will be auctioned a rare and probably unique reciever.

It was built specifically for UK Primary Schools in the mid to late 40's and was only distributed to them by the UK govt. It was never available for purchase by the general public AFAIK.

Called a Pri/Special Six Reciever and built under contract to the UK Govt./ BBC by "Sound Sales", it is a Long and Medium wave reciever, using Octal and 5 pin valves, built on a steel chassis and housed in a steel "Hammerited" case which is showing slight signs of corrosion due to its being stored in a garage for the last 30 years.
It appears complete, and while it probably does'nt work at the moment there is nothing to prevent a rebuild, probably just replacing the condensers and high value carbon-rod resistors.

The Auctioneers estimate of the "hammer price" is 30 UK pounds, but this could be exceeded by orders of magnitude, depending on interest at the sale.

If you would like me to bid for this article on your behalf then please E-mail me with your maximum bid and I will buy for you at the hammer price.

At the sale there is a 10% commission payable on the fall of the hammer.

The Reciever probably weighs in the region of 50-60 pounds and its dimension is approx 18" cube. While built to withstand school usage it will need careful packaging to ensure safe transportation.

At the same auction sale there are two 1940's, or possibly earlier, crystal sets. They appear to be homebuilt as there are no manufacturers marks visible.

John Anderson is a good friend of mine. He would not take advantage of anyone or misrepresent anything that he sells. Please be assured that you will get your money for the SP-600 damaged by UPS. I talked to John yesterday and he had not received the check from UPS. It is good that you have contacted UPS and they have told you that the check is on the way, but he has not received it. When he does he will send you your money. It is common practice for the person sending the package to deal with UPS on the insurance claim. It was not John's fault that the receiver was damaged, so I can't figure why you would think that he should immediately pay you before he settles the insurance claim. I saw the receiver before he shipped and it was not damaged.
I call John frequently and his phone is not busy. He has two lines.
Just be patient.
Thanks,
Charlie Hugg, K5MBX

When power is applied, the plate current goes off scale. A close inspection of the power supply revieled a couple of bad solder joints. These bad joints were repaired. Power again applied and the plate current has droped to 300ma. I removed the tubes and the plate current is now 0ma. I have very little experience with tube equipment let alone linear amplifiers. I do know that the unit is a grounded grid type amp. and that there should be some current because of the grid resistors, but 300ma, that seems like alot. So, do I still have a problem in the power supply or do I need to shop for some new 572B's, or is there something else to look for?

Thanks in advance to all who reply.

John, VE6CU -.--.

Will sell for $125.00 plus shipping

Also:

Hallicrafters S-38D receiver in excellent working condition. Looks better than most that I have seen.
One of the most popular shortwave radios ever made, the charming Hallicrafters S-38 introduced many thousands of people to shortwave and CW listening. It appeared in 1946, immediately after the World War II consumer radio hiatus, and was priced at only $47.50, making it the entry-level receiver for the Hallicrafters line.

Using only six tubes, the S-38 is a transformerless AC/DC radio with a metal cabinet and integrated speaker. Its compact size and low cost made it very attractive to radio-hungry consumers in the postwar years. Following the original S-38 were models S-38A through S-38E, remaining in production until 1961.

Despite its simplicity, the S-38 is a "hot" radio, offering great sensitivity. Like more expensive shortwave receivers, it has a separate bandspread tuner, automatic noise limiter (ANL), and beat frequency oscillator (BFO) for CW listening. It covers frequencies from .54 Mhz to 32 Mhz in four bands. Many collectors consider S-38 the most desirable model in this line, since later models lack the BFO feature.

Source record: 61786

Have an extra Johnson Viking KW Matchbox and could use the value for other purposes. This is the old style, rated at 1 KW AM, which translates into more than the legal limit on SSB. This is the grand-daddy of all tuners. This model has the SWR meter and the outboard coupler. Cosmetically, it has some flaws. Minor scratches but somewhere along it's history somebody made a change that apparently left four small holes in the front panel, near each corner of the SWR meter, which are covered by a screw head that protrudes. Doesn't look all that bad but still it detracts. Have not tested the tuner but there isn't much to go wrong, all the parts are there. This is a large tuner, somewhat heavy so shipping charges might preclude some from expressing interest, unless it is a local pickup. At any rate, I'm offering it for $225, with shipping extra. I cannot ship overseas, however. This is much lower than what I paid for the unit and if it doesn't sell here, guess I'll go the Ebay route, hi.

Thanks for reading the posting.

73s,

Evan

Source record: 61791

The 170A has a flip-open top cover; more convenient. The 5U4 was replaced by silicon diodes. The LO is filaments are on all the time to give better warm-up and stability. There are also more accessory outputs on the rear panel for converters, etc. The 170A also has a calibrated dial for 2 meters (ext. converter required). Not to be confused with the 170A-VHF with internal converters.

I have for sale a Kenwood TS-830S that (WAS) in perfect operating condition, till I blew the finals...I won't go into the details, but in a nutshell I had a coax switch in the wrong position when I thought I was tuning the radio into a dummy load. Oops. Radio looks very good and receives very good, but now needs new finals. I had this package listed before at $675...my loss is your gain...first $400 gets it, payment via PayPal. Comes with Kenwood MC-50 desk mic in perfect working condition and looks good, too. Also, the TS-830S has the optional YG-455C CW filter installed. Again rig was performing FLAWLESSLY before my 'lid-like' mistake. E-mail me if interested.

1606. Swap Globe King 500B

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-11 06:24:23 UTC
From: Jeff James <jeff@eclipse.net>
Message-ID: <39BC7A97.DD86AF57@eclipse.net>
Source record: 61660

Was listed on Ebay, and never heard from the high bidder! Clean and
complete Globe King 500B with a fresh 4-400A and newer Svetlana 811A's
in the modulator. This transmitter was working great with lots of
excellent audio until the fuse blew in the RF deck..I suspect the screen
and bias transformer on that deck (T2) might have bad windings. An easy
fix for those of you comfortable with working with these transmitters.
Will trade for newer working HF gear, or working clean 2k hf
linear..What have you? This is a pick-up only swap in NJ!!
See it at:
http://www.eclipse.net/~jeff/500-b.jpg
Thank You..

Someone was asking about using the newer low-impedance mics with older tube rigs:

With any circuit, the greatest transfer of energy occurs when the source impedance and the load impedance are identical. The closer they are, the greater the energy transfer will be.

Vastly different impedances will cause loss of signal. Also, this loss will not be linear with respect to frequency, and you lose "tone" as well. A mis-match will often ruin the frequency response of the audio circuit.

Microphones are not all the same.
There are low impedance (500 ohms or so) and high impedance (10,000 to 50,000 or more ohms) microphones.

The two are not interchangeable.

Someone can probably make a good treatise on dynamic, crystal, ceramic mics etc.

If you try to use high and low impedance mics in place of one another, there will
usually be a loss of signal. It may come out sounding muffled or very weak.

With the older rigs that have a high impedance mic input, you need a "hi-Z"
microphone. You can sometimes find a dual impedance mike, such as the Turner Plus Three or a Shure 444D. These desk mics have a switch for low or high impedance built into them, which is nice.

That way you can use the mic with either a newer rig or the older ones just by flipping a switch. They also do not cost as much as a new Kenwood / Icom/ Yaesu desk mic either!!

I have two of the Turner dual impedance mics for sale at $35.00 each if anyone is interested.

I also have new E-V 602 mobile mics that are high impedance, and some good used Shure 404B mobile mics which I have to check on what impedance they are!

As we used to say...

"Dip the plate, peak the grid."

In the old days that was all you really needed to know.
For a 6146 rig like the DX-60 I would suspect the grid current should be
kept to 2 ma or below (in the "tune" position) and the plate current loaded
up to no more than 120 ma. While do do not have a DX-60, I regularly operate
an Eico 720, a Lafayette Starflight and an HW-16 and they all are the same.

Good luck!

Hi,

> With any circuit, the greatest transfer of energy occurs when the
> source impedance and the load impedance are identical. The closer they
> are, the greater the energy transfer will be.

True, however in this application the goal is not to transfer power but preserve voltage level. This requires that the a large impedance mismatch (10:1 or so) exists. We want to maximise signal to noise ratio not power transfer. Low level audio input stages are generally run as bridging (much higher input impendace than the source).

> Vastly different impedances will cause loss of signal.
>Also, this loss
> will not be linear with respect to frequency, and you lose "tone" as
> well. A mis-match will often ruin the frequency response of the audio
> circuit.

Only true if a high impedance source tries to drive a low imedance input. Some transducers are designed to be run into a specified load to tailor the frequency response. Most mics do not fall into this catagory (within reason of course). Magnetic phono cartridges do. Low impedance microphones are used where cable runs can be long such as professional recording and broadcast applications. They are also generally run in a 3 wire balanced mode. High impedance mics will exhibit high frequency rolloff due to cable capacitance when long runs are used and are run single ended using 2 wires. The advantage of using a high impedance mic is that the output voltage is higher and the input stage needs less gain.

> Microphones are not all the same.
> There are low impedance (500 ohms or so) and high impedance (10,000 to
> 50,000 or more ohms) microphones.
> The two are not interchangeable.

You can use a low impedance mic in an input designed for high impedance if you use a matching transformer. This provides the step up in gain needed to bring the level up.

> If you try to use high and low impedance mics in place of one another,
> there will
> usually be a loss of signal. It may come out sounding muffled or very
> weak.

This is true in the case of using a low impedance mic with an input designed for high impedance as the stage gains are much different. You can probably get away using a high impedance mic into a low impedance input since the

increased gain of the input stage makes up for any loss caused by the lower input impedance that the mic may see.

1614. Full Set of TM's for R390A fs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-11 13:31:14 UTC
From: Tom Montgomery <montgomeryt@your-net.com>
Message-ID: <39BCDEA2.C7C8DFA7@your-net.com>
Source record: 61668

I have a full set of TM's for the R390A. These are in mint condition
and are all originals. They include the changes with current pages.
Incuded are:
TM 11-5820-358-10 Operators Manual(16 January 1961 with changes 2
through 4)
TM 121-5820-358-20 Organizational Maintenance Manual (10 February 1961
with changes 2 through 4)
TM 11-5820-358-20P Organizational Maintenance Repair Parts and Special
Tools List(1 August 1990)
TM-5820-358-35 Field and Depot Maintenance Manual (8 December 1961 with
current changes through #4)

These manuals have never been used and are updated with the changes
printed. They will come in a hard back binder.

I am asking 40.00 and if you want them delivered USPS please include an
additional 3.20 for
postage. If you live in the Cincinnati area I will meet you for
delivery.

Thanks
Tom

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=424259485

Bid on this Professional Pacific Recorders "AM" Compressor/Limiter! This is the perfect audio processing item for any AM Boatanchor Station. The Multilimiter is completely adjustable and is specifically designed to deliver clean, clear audio, while maintaining "loudness," without overmodulation. Input impedance is 600 ohms, floating, bridged-T input control, transformer isolated. Input level is -25dBm minimum for 5dB gain. The Maximum output level is +24 dBm. Frequency response on AM is (+/-)1dB, 50Hz-15KHz. Signal to noise ratio is better than 72dB for -20dB input. More specs on auction page. This unit list for $2000+ when new and is a perfect match for any vintage audio chain. Use it with you Johnson, Heath or Collins AM rigs!
It will sell for a $500 reserve. Well worth the price. I've paired down my shack and am no longer operating AM, so it goes with much of the gear.

Subject: Garage Sales are The Best!

We know eBay is expensive, and at the last 2 hamfests I attended, most of what I saw was eBay pricing!

But this weekend my wife and I were doing some garage sale-ing, when we drove up to a place that had a Hallicrafters R-46 sitting on the table. Gut had been using it with a radio in his garage, but since it had low output, replaced it with an old stereo. So I bought a very nice speaker for $10.00.

As the conversation progressed about old radios and such, I learned that granpa's old stuff was in the basement, but too heavy to drag upstairs! So we went to look. A sale did not ensue(but I left my QSL), as he wasn't sure about parting with it just yet. But I did get a bunch o'tubes and such, all at bargain prices. My best buy since last summer, when I found a Heathkit SA-2060A tuner for $25.00.

From: foxblaine@aol.com (R. Blaine Fox)
Subject: Garage Sales are The Best!

And ya just had to rub our noses in it, didn't ya! Good for you! I HAVE, however, found some awesome deals on eBay...the trick is to find someone who doesn't know what they have. I know this is off topic, 'cuz it wasn't a 'boat-anchor', but I bid $500 on an Icom 706 pkg that was misplaced on eBay (i.e. not in Ham Radio). I had just searched on the keywords Icom 706, as I was in the market for one. Well, there was a picture on the auction ad, and I could see an Icom SP-21 and several other items in the pic. I e-mailed the seller and asked what all was included. All he could tell me was that he wasn't a ham, that he had inherited it, and 'everything in the picture' was included. So I got the 706 with seperation cable, the SP-21 filtered speaker, and other 'goodies' for $500!

Geez...a bit long winded tonight, I guess, aren't I??? Anyway, my point is there ARE deals to be had on eBay! Ya just gotta find the proverbial needle in the haystack!

From: "Ron Ostman"
Subject: Hallicrafters battery charger f.s.

Yes, a battery charger! I have no idea what this was for but it appears to be a late 40's or early 50's vintage 6V battery charger. It works and has appears to be all original. It is
3-1/2" wide by 6-1/2" high and 4-1/2" deep. It can be hung on the wall with a keyhole slot and has 2 cords and 2 slide switches on the front. It has "the hallicrafters co." on the front in the same script as found on S-38 receivers, etc. Switches are are labelled "High Charge/Low Charge" and "On/Off". Maybe it was for portable radio batteries??

$20.00 plus shipping

Sorry if this is off-subject, but maybe some Hallicrafters guy would be interested in this?

Subject: St. Louis, MO Antique Radio Swap 17 Sept.

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have their fall swapmeet on Sunday, September 17th, 2000.

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is different than our spring Location. Swap begins at 9:00 a.m. The boy scouts will be barbecuing and selling lunch. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the Legion Hall parking lot. In case of inclement weather, swap will be held inside the Legion Hall. We'll do it rain or shine!

No Admission Fee. The swaptable fee is $5.00 for Antique Radio Collectors & Historians club members or $10.00 for non-members. Please bring your own swaptable.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map.
Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

Check out the Glowbugs mailing list and archives. We have
been regen building for years, and there is some timely topic
discussions on the list. Also lots of good firebottle stuff.
We even run the things on rountables nightly, in the ham bands.
Newslist archives are available from various places, too.
If you are into things such as regens and Hartleys, etc.,
come join us!

I've recently built a 2-tube Rx with a nice mahogany front panel, I'm in the middle of building 1-tuber - a near replica of the first radio I built in the '50s, and I'm drawing up plans for a more complex set. I'll see if I can e-mail you some photos if you like.

FS..Johnson VIKING VALIANT ll....This is a great working unit,
in nice shape...it does show some wear around the drive, meter, and
oscillator dials, but overall the unit is in good condition, and
appears very original...It puts out over 200 watts on my Water's
wattmeter, and the pattern looks great on mjy Heath Monitor
Scope...This is a pick-up only on eastern Long Island, as I can not,
and will not ship it...jpg-s to interested buyers...$400.00

Help,

I need a PTO knob for a drake C-line
It has a finger style spinner.
I have the kind without the finger spinner and I want to change to one
that does.
I don't need the metal rim at the base.

Just acquired a Hammarlund HQ-129x and it seems to be working ok at times I feel it should be just a bit more sensitive.
Would a cap replacement be worthed?
And if so which capacitors should I replace, and with what?

Thanks,
Gil

I replced ALL the wax/paper caps in my 129X with metal-film replacements. Also a THOROUGH re-alignment is needed to bring out the best in this set. The crystal filter in the IF stages are part of this careful alignment.

Don't feel alone Dean. I heard a thump on my doorstep one day after eagerly awaiting the arrival of an older Sonar tube type transceiver. Upon going downstairs and opening the door I found a frail worn out box with the tape barely holding the top together. Postman no where to be found. I brought the box in and started unpacking it. I knew I was in trouble when all these little plastic pieces started hitting the floor. It was bits and pieces of the S-meter. Whether it was the improper packing or the drop on my concrete doorstep I will never know. Both did not help. I am sure there are other countless similar stories out there. Good luck on your search.

(it was shattered into a zillion little

Forgot to mention... I use orange drop caps from Antique Electronic supply. I have found them to be the best. Cheaper parts are available, though. In the above company's catalog, there's a good tome on the various types of caps. Make your own judgment.

1666. Hammarlund HQ-120 Restoration questions--Please Help!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-12 03:32:04 UTC
From: loggiedog@my-deja.com
Message-ID: <8pk83k$5s2$1@nnrp1.deja.com>
Source record: 61718

Hello, I have three questions to all Hammarlund HQ-120, 129X
readers.

I found an open in the RF-Choke of my Navy version HQ-120
radio.(Model CHC47140 RBG) It seemed to have been touching a
power resistor on the unit and therefore caused an open circuit,
cutting off the antenna input from the receiver. This is the first rf
amplifier input tube(6SJ7). Since I don't have a manual for this
particular unit, I had to refer to the HQ-129x manual and I found the
RF-Choke I was looking for. It is Labeled L20 and it connects
directly to the wiper of the sensitivity potentiometer. Unfortunately,
the manual only refers to this part as RF-Choke and gives
Hammarlund part number 6181. It has five connected coils and is
dipped in wax. I found the open circuit and repaired the choke to
the best of my ability, then rewaxed it. The resistance measures
35 ohms approximately. Two other coils in the unit measure the
same resistance and look exactly the same.

I was wondering if anyone knows the value of this rf-choke, and
where I could find an exact replacement, or if this is not possible, a
modern replacement.

Also, where could I find original Daka-ware knobs for the sensitivity
and antenna compensator controls on the radio, or where I could
find them. These are the smaller chickenhead style knobs.

Finally, almost every website I read recommends that I replace
electrolytic and paper capacitors, does this include replacing the
huge power filter capacitors? What about the "three in one" .1mfd
600 volt caps? These smaller. 1.5in *2in *3/4 in caps are encased
in metal and mount on the case. Do these require replacement,
too? Case appears to be common for these three in one caps.

Once I know all this and fix everything I will be the happy owner of a
great nostalgia radio that will sit aside my R8 and DX-394.

Thank you very much for your help,

Marin Bronis

Thanks guys!

With apologies - I stand corrected!!

It is NOT "rare" to the experts out there!!

At least - *I* had never seen one before, so it was rare to me and perhaps some others. I apologize to everyone who was offended!

I concede that this receiver is nothing special, now that I am getting educated... grin.

However with the encouragement of this illustrious group, I have now got off my duff, cleaned it up and made it shine(!)

I also got the tubes out and checked them and found out that a 1T4 had been substituted for the 1U4 and was also zero to low in emission.

For the latest version of this receiver - take a look at the newly cleaned up green monster, and see if anyone would like to have it...

If you think $35.00 is too much, make an offer!

It would look great on the set of an old 1940s movie!

Or do I have the wrong decade? Experts, fill me in!

Thanks!

What "application" do you refer to? I was thinking of older amateur
radio transmitters with hi-z inputs. The cable run is of course, no
more than 3 feet in most cases!

Yes, but you will lose frequency response by going through a
transformer. There are some transformerless mic pre-amps that do a far
better job than a transformer. But in either case you have had to add
an extra device whether internal or external. This takes space and/or
money, either of which may or may not be a consideration.

For most hams they are a consideration.

Turn it off. There are wearout mechanisms that are 'on time' dependant.
The major problem with turn on is the current rush into the tube
filaments when cold, and this is only a minor problem. Generally, tubes
are easily available and relatively cheap, so failures are not a big
issue. The other wearout items are less easily replaced and should be
conserved.

Dave,

Just wanted to add a little extra comment, due to the fact that
you are using a HA-230. This receiver has a separate filament
transformer for the RF Amp, Mixer, and Local Oscillator tubes.
When you turn off the power switch, only part of the receiver is
turning off. The manual states that this is for stability
purposes. The filaments of the abovementioned sections stay
lit as long as the receiver is plugged in.

I have the predecessor to the HA-230, which is the HE-30.
The HE-30 switches everything off but is essentially the same
receiver. The only difference I noted is the filament wiring.

If you don't have a manual for the HA-230 you can download
one for free from "http://bama.sbc.edu/". Just look under

"Lafayette". It discusses the filament arrangement.

Martin

Do you have a capacitor checker? That way you could check the caps by lifting one end.

Does the rcvr work now?

If it does, and there is a buzz in the audio...or hum, then those filter caps must go. Some people also put a small 1/2 amp fuse in the B+ line so if a filter cap "goes" it won't burn out the xfrm before the fuse blows.

If any of the wax 0.1mf caps look bulged on the ends, I'd replace those. Many people will just replace carte blanche all caps. I used to but holding back a little now and consider it overkill in some instances. If they are open or shorted, of course do it.

A lot of the guts who've been around a long time go my the mantra "if it ain't broke don't fix it". its a personal choice.

Good luck.

Hi All

I have noticed that lots of the guys in this group fail to use the standard, Please and Thank You..... even when they are asking for help, information, and parts.��� Check out the last few requests and see if Im not right.

Ignoring the above,� recently I sent someone a copy of an instruction manual and all related diagrams.� Fellow didn't say please, nor thanks.� But I kinda ignored that.� Cost me about a buck or more to send it out (ignoring copying costs).� I didn't ask for any reimbursement,� but you would think that the fellow would email a thanks or something.

Now I know we are all getting modern with Digital communications, cable modems, speed of light everything.� I don't think any of this new stuff is a replacement for some basic courtesy.

I now just ignore requests that have no please and thank you in them.� I bet a lot of other guys also do the same.

So, please start off your requests with please.� And end up with Thank You.� You WILL get better results!

Please, and thank you!

Steve

Dear All,

The St. Louis, MO area Antique Radio Collectors & Historians will have their fall swapmeet on Sunday, September 17th, 2000. It's this weekend!

All are welcome!

American Legion Post Hall 300
4760 Heege Rd.
St. Louis, MO

Please Note That This is different than our spring Location. Swap begins at 9:00 a.m. The boy scouts will be barbecuing and selling lunch. Visitors are welcome and encouraged to bring items to swap! Swap is planned for the Legion Hall parking lot. In case of inclement weather, swap will be held inside the Legion Hall. We'll do it rain or shine!

No Admission Fee. The swaptable fee is $5.00 for Antique Radio Collectors & Historians club members or $10.00 for non-members. Please bring your own swaptable.

Partial List of Activities:

Swapmeet of Radio/TV/Antique Electrical Apparatus
Raffle of Radio & Radio-related items
Antique & Classic Radio Demonstrations

For more details about this event and our club, please visit our club's home page:

http://home.stlnet.com/~keymaster/arch/arch_home.html

The web page included directions to the swapmeet site and a map. Pictures from our spring swapmeet/picnic are included too.

For questions, please e-mail me directly.

Thanks and look forward to seeing everyone!

Boatanchor Miscellany FS

Heathkit SB-301 Receiver. 1966-vintage ham bands receiver. Covers 80-10 meters. Classic Heathkit 2-tone green styling. This rig comes with the power cable and the optional CW filter (plus the standard SSB filter. This one has a few cabinet scratches but nothing that really hurts its appearance. The front panel is pristine. An unoriginal internal speaker has been added without drilling any new holes. Otherwise the unit is all Heathkit original. Untested. With original full assembly manual. The tube lineup is 1-6CB6 LMO, 1-6BZ6 RF Amp, 3-6AU6 1st, 2nd MXR, Xtal cal, 1-6AS11 Prod det, BFO, BFO amp, 1-6AB4 Hetrodyne Osc, 1-6BA6 IF Amp, and 1-6HF8 1st audio, audio out. $120. Prefer to sell with SB-400 listed below.

Heathkit SB-400 Transmitter. 1965-vintage HF transmitter designed to transceive with the SB-300/301 or 303 receivers. Covers 80-10 meters. Classic Heathkit two-tone green styling. Comes with power cable, a full crystal set and a copy of the condensed manual. This radio has some scratches but is very nice overall. No unoriginal holes or other foolishness. Since the full crystal set is included, this TX can be made to transceive with any RX, not just another Heathkit SB-series RX. The tube lineup is 2-6146 Final Amplifier, 2-6EW6, 1-0A2, 1-6AU6, 1-6AV11, 1-6AW8, 1-6CL6, 1-6D10, 1-6EA8, 1-6J11, and 1-6BZ6. Untested. $120. Prefer to sell with SB-301 receiver listed above.

Homebrew command set receiver power supply. This is built in a T-18/ARC-5 transmitter cabinet and chassis. No original parts are used except the 3 tube sockets on the rear of the chassis. The front panel has a new metal overlay that covers all the unused holes and makes for a neat appearance. It has only a pilot lamp, fuse and 2 togggle switches on it. The rear apron has 3 connectors, 2 octal ocket output conectores and one recessed, flush-mount male AC input connector. The supply is a well-made unit with a 5W4 rectifier, OD3 VR tube and a capacitor-input pi-section filter. The cabinet has the original black paint and the front panel has been sloppily painted black to match. Comes with one octal male to octal female output cable. As-is. Untested but should come up easily on your variac. If you're not running your receivers on the original dynamotors, then this would be a good option for you. $15

Weston Radio Set Analyzer Model 660. This is one of those 30's vintage do-all radio testers with a combined VOM, limited tube tester and tube-socket "probe" for plumbing the depths of any BC radio problem. This thing needs cleaned but should end up looking excellent. The cloth cord going to the "probe" is in perfect shape--no fraying. The meter and function switch both appear to be in nice shape. But there was a

mall 2 position rotary switch at the bottom center of this tester that is missing. It is marked " K <-X-> H " whatever that means. Inside, it appears to be in perfect shape and there are 3 wires hanging loose wherethe switch used to be. As-is. $10

R-28/ARC-5 VHF command set receiver and homebrew power supply/control box. The radio uses 4 WE 717A tubes plus 6 standard 12V types. It is crystal-controlled on 4 channels. Crystals currently in it are 4775kc, 4970kc, 5375kc and 5660kc. Lots of small dents on thin aluminum sides. Scuff marks on top. The power supply/control box has wires soldered to the pins of the front and rear connectors. The pins on the rear connector are gone. The dynamotor connector has one bent pin but is otherwise intact and the dyno mount is unmodified. No other modifications or problems. The power supply/control box looks like it was designed to control two radios and it has a switch to switch between them. It also has a Squelch/BFO control and a sensitivity controls, plus 4 pushbuttons to select a channel. The supply section looks well-bult, uses solid state rectifiers and is built with high-quality components. Untested. As-is. $29

Hickok Audio Frequency Signal Generator Model Number 198 (also marked "I-151" whateverthat means...). This is an older model generator covering 20c - 20kc in 3 bands. This is a portable unit in a black-wrinkle metal cabinet with a metal handle on top. It only has 3 controls Frequency, Range and Output. Uses binding posts for connections. Front panel has some light corrosion spots all over. The dial that displays the frequency is spotted and the dial glass is missing. Restorable. One of the oldest pieces of Hickok gear I've ever seen--probably 1930's vintage. As-is. Untested. No Modifications. Original knobs. $10

LITERATURE

Military "Instruction Book--Radio Sets For Operators." This is from the Armored School Communication Department, Fort Knox, Kentucky. Dated October, 1944. Covers the following radio sets: SCR-509/510, SCR-508/528/538, SCR-193, SCR-506, and Frequency Meter SCR-211-J. Complete operating instructions for all sets with many photos and diagrams. 108 pages. Very good condition. $35 PPD

Allied's Radio Circuit Handbook, Allied radio, 5th edition, 1959, 36 pages. Features construction details and schematics for many popular Knight-Kits including the Space Spanner and their 50 watt CW Transmitter. Excellent condition. $18 PPD

Boatanchors & Literature For Sale

Morrow CM-1 Conelrad monitor AM radio. Working. Dirty. Front panel will clean up to excellent condition. But case has light surface rust in spots that might not scrub off. A couple paint chips on top. All original. $39

Gonset G-11 Citizen's Communicator Model 3033. This was designed as a idiot-proof CB base station. It is single-channel crystal control and was originally crystalled for 27.085mc, though the xtals are missing from this one. Did this oruginally have a PTT mic hard-wired into it (there is no mic connector)? Or did the speaker also act as a microphone, intercom-style? Either way, there is no mic with this one. This has original knobs and paint. There is some pain scuffing along the top front edge and in a cuple other small spots. There are two 3/8" unoriginal holes in the top of the cabinet. Inside, it is unrestored and all-original. As-is. Untested. $30

General Radio Type 874-VI Voltmeter Indicator. The acetate instruction sheet affixed to the bottom says "this instrument is use to indicate the rectified current and to calibrate the crystal at the level of applied voltage. For Volyage Measurements with the 874-VR rectifier." Accuracy 10% up to 3800mc. Complete instructions and schematic on bottom of this small text device. Runs on 120VAC. Modern gray GR design with metal case. Like new inside. Original. Complete. As-is. Untested. $29

General Radio Type 1555-A Sound Survey meter. Small handheld or tripod-mounted DB mter with internal mic and analog meter. Black case with wrinkel finish. Uses 4 Raytheon wire-lead tubes and internal 1.5VDC and 30VDC batteries. Someone has soldered a wire to the 30V batter connectors and run it outside the case to use an external power source. But no unoriginal holes are used. Otherwise all original. Untested. Complete. As-is. $49

Heathkit AR-3 receiver. Older general coverage Heath RX covering 550kc-30MC in 4 bands. Slide-rule dial. Wooden cabinet covered in gray-print vinyl. Plain silscreened aluminum front panel. With band spread, BFO and AVC. 1956-1960 vintage low-end radio. The problem with these radios is that when you find them, usually the vinyl covering is in sad shape. But that is no so here. The vinyl and speaker grille flocking are in very good or excellent condition. The vinyl has one tny ding on the left upper front corner and the number 61 written in magic marker on top in the right corner. The number should wash off and the ding is tiny.

There are no unoriginal holes or other modifications. I think the fiver lower knobs are correct. But the two upper knobs are missing. The dial face and silk screeningare in nice shape but the dial string is broken. The copper chassis is clean with minimal staining. There is no dial glass (is there supposed to be?). Find the two missing knobs and this will be a nice addition to anybody's Heath collection. Untesetd. As-is. $79

National NC-33 general coverage RX. This is a 1949-vintage receiver covering the usual 500kc-35mc. It has a BFO, AVC and mechanical bandspread. It uses 12V tubes. This one is in very nice shape with a few scatches in the paint on top. It needs a good cleaning. The two small round knobs used for pitch and AF Gain are light blue National knobs and I'm sure this is wrong. Otherwise it is all original. Complete. Untested. As-is. This will clean up into a really good looking radio. $95

Boatanchor Literature

The Radio Handbook For Amateurs and Experimenters by Frank C. Jones, 1936 edition. This is a premier BA handbook. Covers and spine are intact but showing wear and chipping at the spie edges. Inside is very good and this copy is quite usable. $50

1932 ARRL Handbook. 9th edition. Covers are intact and nice but covers and spine have separated from the contents. Spine top and bottom are chipping and small pieces are gone. Contents are in good shape and binding is holding up well--it is a usable copy. The back cover has a long tear in it. These are not common any more. $50

1931 ARRL Handbook. 8th edition. Covers are intact and in pretty good shape. Spine top, bottom and the joints with the covers are chipping and small pieces are gone. Contents are in good shape and binding is holding up well--it is a usable copy. This is in somehwat nicer shape than the 1932 edition above. These were probably never really common. $60

National NC-46 receiver original manual in very good condition. $25

Hallicrafters Service Bulletin for Model SX-71. In perfect shape with fold-out schematic. Original: $34. Photocopies: $8 PPD.

Hallicrafters Service Bulletin Number 1 For Models S-40. In perfect shape with fold-out schematic. Original: $34. Photocopies: $8 PPD.

The Hallicrafters Operating and Alignment Instructions Skyrider 5-10 Model S-21. This is the original manual in excellent condition. Original: $34. Photocopies: $9 PPD.

Military TM 11-356 Radioteletype Terminal Equipment AN/FGC-1 original manual. Dated August, 1952. Mint. $11

Radio Magazine: The following issues are $3 each. These all have covers but spines are deteriorating. Preference goes to someone who wants them all.
1936: Jan, Apr, Jul
1937: Jan, Feb, Mar, Apr, Jun
1941: Feb

WANTED:

Help identifying this panadapter: I recently picked up a CEI receiving setup that includes a CEI 970A receiver and FE-103 Frequency Extender. It came with a panadapter that has no ID tag. The panadapter has the same front panel style and was designed to mount in 1/2 of a 2U 19" rack space. It uses a mix of tubes and transistors. The CRT is a 3" wide rectangular 3XP1. Other tubes used are nuvistors like 6CW4 and those tiny 7587 ceramics. Any help Iding this unit and/or locating a manual would be greatly appreciated.

Hallicrafters S-36 original manual. I already have a copy of the S-36A Rider info. I will trade my original RBK (Hallicrafters S-27D) manual for an original S-36 manual or pay cash.

Manual for General Electric YGS-3 Signal Generator

Manual or any info on Signal Corps U.S. Army Het. Monitor BC-1255-A made by the R.L. Drake Company under order number 674-DAY-44.

Manual for Heathkit SB-610 Station Monitor 'scope.

FOR SALE

Hallicrafters S-76 receiver:
1) As part of an estate e.g. we're just handing the
deal. Therefore, untested but looks OK.
2) Original black paint
3) With repo manual (I think I saw one at the
club that would go with it)
4) Has all tubes
5) All knobs
6) Good cosmetic condx (needs cleaning as been
in storage)
7) All controls work (none binding, frozen, etc)
8) No rust, dents, scratches, etc.
9) Original AC cord.

Price $190 or best reasonable offer plus shipping
costs. We can "probably" find a box locally and if
so, can come up with bubblewrap, styrofoam, etc
and pack it at no additional cost.

Hi
You are not alone in your reply. I received many replies about helping fellows without a thanks. I don't really understand why a fellow can't at least e-mail a thank you. But now we are in the modern world. Take and give not. Must be in the newest tablet I haven't seen yet.
Steve

Hi Gang,

I'm clearing out a few of my Boatanchor receivers. I have a nice National HRO-7 set available, complete with speaker, power supply, and A,B,C,D,E, and AC coils. The radio is working and in very good cosmetic condition but is otherwise unrestored.

Here's something entirely different - I wish to swap the National for a motor scooter (like a GoPed or Mosquito) or minibike for my 13 and 12 year old boys (and, sometimes, their Dad) to ride. What have you?

TNX es 73,

Tony W8HRO

I have 4 ea. new Eimac 3-1000Z tubes. They were spoken for, but the fellow who wanted them has not responded to emails for our upcoming meeting at the Bowie, MD FAR-FEST. Soooo, I have these 4 tubes for sale. I'm open to offers, at least $225 each and/or possible trades for med-hi power AM transmitter (pref. mil). Again, I will be at the FAR-FEST and or meet in the MD-DC-VA-PA-WVA areas. Sorry, but I will not risk shipping these tubes. Tnx.

It's been a while since I took my tuning units apart. I doubt that it was used after the war, being so obsolete. That rig was designed in the 1930s and had that era's technology. I remember from the original (WWII) operator's manual that the BC-375-E was not operable at higher altitudes without it arcing. I ran a Eimac 250TH in mine after I converted it. I remember working a station in Australia on 80 meters with it in 1958 when I was a freshman in HS.

Eventually I worked up to a rack-mounted Eimac 4CX1000A multiband linear (160 to 10 meters). It still works today after it was built in 1966. I was the chief engineer of a 10 KW daytimer back then, and I switched antenna tuning/phaser units and used the two-tower phased array (5/8 wavelength high @ 75 meters) and worked all over the world on 75/80 meters after evening signoff. My homebrew power supply put out over 4 KW.

I know this is a long shot. But whos the authority on Japanese boatanchors.
I have a bunch of plug in xtals with Japanese writing on them and a ship
anchor so Im assuming there navy. The holders are kinda like FT-171-Bs
(BC-610). Kinda like to see the gear they went in.

> I may be wrong then.

A little.... The dates are referring to overhaul depot modifications, in particular treating with heavy goo (like a lacquer paint sort of stuff containg strong fungicides). MFP is Moisture Fungus Proofing. That was done anytime things were going overseas or would be in a tropical sort of environment.

> In the upper left corner it says MPF-L.S.D.
> DEC-50. Stamped in the upper middle is MFP3/45. And the two handle to grab on
> to.

It was moisture and fungus proofed in March, 1945 and again in December, 1950. The second time was probably done for repairs or overhauling of the set. It was built prior to March, 1945. L.S.D. was probably the Army Air Corps (just then USAF) overhaul depot where the work was caried out, but I am not, offhand, familiar with that particular depot nomenclature. It has been some 35 years since I was last up on USAF depot facilities, and most of our stuff then came out of the OCAMA depot (Oklahoma City Air Material depot).

A few were, in training use and special purpose use. I still run a
BC-375E on 160/80M CW, on dynamotor power. It works fine, if you know
how to set it up, and properly neutralize it, and properly run it.
It is a bit of a clunker, though. The design dates from 1935 by
General Electric, and was built specifically as a disposable radio
transmitting set for aircraft (and limited ground) use. A ground
equivalent design that is mostly identical was the BC-191 (12 volt
version). There is an limited aircraft/ground version of the BC-191
with no internal tuning components (BC-AA-191) that was designed to
even lesser specification as the disposable transmitting set. The
AA series had no tuning sections and no temperature compensating
components. GE appears to have copied an earlier 1931 design
by RCA for a one band aircraft transmitting set, mostly identical
in all respects, but without plugin tuning units. The BC-191/375
were rugged and well designed sets, that hams have poorly understood.

Do you collect crystals? Then perhaps you'd be interested in this General Electric crystal for 5292.14 kHz. The case is in excellent condition, and the crystal still oscillates. I tested it with my grid dip meter and R-390A to check the frequency accuracy and it's right on. The crystal pins are the same width as those on a FT-243, though they appear to be a little smaller in diameter. The Crystal case is about 1 1/2 times larger than a FT-243. The metal cover is blue with silver lettering.

I can send you a picture of the crystal, if you like. The crystal is going for $1.00 plus postage.

Source record: 61558

I think another difference
between the Hammarlund HQ1xx and HQ1xxA models is that the A models
use solid state diodes instead of a rectifier tube in
the power supply stage. That tube ran plenty hot in my HQ170C.

I bought a HQ170C used from Harrison Radio
in 1966 and traded it in on a used
Drake R4A from the same store a couple of years later.

Hello,

My receiver works now because of the repair that I did to the choke. In addition, I don't hear a sound in the radio(there is no speaker on this model)when I turn the power on, except for a hum in the earphones. I do hear a slight hum and white noise in the earphone volume when the sensitivity and volume control is turned down to the lowest setting. Other people have said that this is normal for tube radios.

However, I cannot find the wax capacitors you were talking about, only these "three in one" metal encased "bathtub" style .1MFD 600 volt metal capacitors with one common gnd and three terminals. It looks like its about 2inches*2.5 in * 3/4 in. and made of metal. It has holes for mounting bolts. There is only one paper capacitor in the entire circuit, and that's in the audio amplifier. It has the same value as these "three in one" bathtub metal caps. Does this mean that this "bathtub" cap is a set of three paper caps hidden under one metal casing?

By the way, what does an "open" capacitor mean? Shouldn't the capacitor have super high resistance, in the megohms? My meter can't do more than 10 Meg.

When you say lift one of the ends and test the capacitor are you suggesting that I desolder one of the cap leads and then test the capacitor? That's almost one of the two steps needed in replacing the caps.

Thank you for your help and advice,

Marin Bronis

Subject: FA: Newark Radio Catalog, 1953

A catalog from nearly 50 years ago in gorgeous condition! Auction ends
this weekend. Only bid to $5.00 right now.

A great item to read and relive the "glory days" of radio. Great
pictures and descriptions of all the old favorites: Collins,
Hammarlund, National, Hallicrafters, etc.

Newark may have been overshadowed by the other Chicago mail order
dealer, Allied Radio, but their catalog sure makes for interesting
reading!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=425298276

Thanks for looking.

From: Bill Abate
Subject: FS: Henry HF amp 2KW+

An outstanding Henry 2KD-3 amplifier. Ruggedly built pair of 3-500Z's with PI-L output, 80 - 10M. With 150 watts of drive it delivers 1800 to 1900 watts out, key down not PEP! This is a desk top kilowatt with floor mounted power supply. The power supply is extra heavy duty. The plate transformer weighs 38 pounds itself! No series electrolytic capacitors, this supply has a 5 KV oil filled capacitor with choke input. Exceptional protection with a fused meter and over current relay in plate circuit. On the air now. The cosmetics are between an 8 and a 9. Very nice! 120 volts or 240.

I would rather not ship this amp because of the weight. I am located near Philadelphia. Asking $875 or will sell less finals for $775. I have jpg's.

You'll probably get a lot of flack for the subject of this post. Why do you call it "rare?" A mid-'50s portable radio isn't particularly old or rare. Might be nice if it was at least washed of its coating of dirt.

Good luck!

Subject: Garage Sales are The Best!

Suspect some of those "awesome deals on eBay" are too hot to be peddled locally. The auction sites have become a dumping ground for stolen equipment. While your bargain may or may not have been from an estate, many others aren't. I see a lot of items that probably were ripped off from employers.

From: "Jim Berry K7SLI"
Subject: Need Merit Transformer Information

Hello BA Fans,

A feller gave me a power supply that I will use for the HV supply to run my 2 X 813 Mackay Marine transmitter. Wonder if there is anyone who can tell me a little more about this transformer.

It is a Merit Coil & Transformer Co. # 524004. The choke is the same brand name but it's part No. is 56B002. Anyone have any ratings handy for this combo? There is nothing on the transformer or choke saying anything.

The transformer also appears to be 115 AC. I will rebuild the supply and use an auto transformer (variac) on the input so I can get just the right voltage I want.

Since the transmitter is rated to run at around 400 watts out, and my AC supply will be 115, I will not try and push the transmitter to a full KW. Probably would be easy with a pair of 813's, but I doubt it would be needed.

Sure would be nice to at least know what the current rating really is.

Yep....sounds more "like" the sort of radio used not by a ship
necessarily but by a coast station......which brings up the callsign of
a U.S. small coast station.....not sure of USA regs but from my
experience was typical of the call signs used by the coast station for
tug companies, telephone companies etc etc. A large coast station would
have had just a 3 letter callsign.

1719. BC-745 radio wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-13 06:24:02 UTC
From: robinson@srsuna.shlrc.mq.edu.au
Message-ID: <8pn6i2$b93$2@sunb.ocs.mq.edu.au>
Source record: 61563

Hi There,

I'm looking for parts of an SCR-511 radio
which has components:

BC-745 transciever
BC-746 Tuning unit
PE-157 power supply
T-39 chest unit (box with a horn sticking out)
FT-338 mounting
BA-49 battery

The radio looks like a pogo stick.

Maybe you have one for sale or swap?

Were the B-17s still flying in 1950? I actually used a BC375E once
before I converted mine to a 500 W AM rig in 1959. This transmitter was
fairly obsolete when WWII began. I'm surprised that a tuning unit would
be built in 1950. I suppose that it must be a serial number.

Jack,

I don't know if you've already had responses to this, I only read your note today...

My SX-100 (mark 2) has a Grey lid. It appears to be the same light shade of gray as the area of the face that surrounds the dial 'eyes', but because the lid is perforated the color (to me at least) looks slightly darker...

Hope this helps

Looks much better, for sure! It's from the middle 1950s, and the handle certainly isn't "art deco" -- more like "space age moderne." I can imagine this radio in a "Gidget" movie, or playing at poolside in one of those "Mutant Alien Invaders Menace Partying Teenagers" pictures of the Atomic Age.

As for its value, I'd say that the collecting market has not yet moved to embrace this kind of set, at least at the $35 level. But I've been wrong before!

No offense taken, and I hope none given, in comments on this radio and post.

Hi All,
I have a Johnson Viking Courier with manual and am headed to a hamfest this
weekend. Any guess as to what I should ask for it? It's about a 7
cosmetically. Loads, tunes but not really "tested" in a long time. Want
to start at a fair price but don't want to get laughed at nor give it away.
Thanks for input.

Hi Mark,

There is a guy who has been advertising in Electric Radio for at least the last two or three issues. I am writing this on the road so I do not have access to a copy. I seem to remember that he even quotes his fees as being something like $150 for a Ranger...$250 for a 75A4 etc etc. I would be surprised if you did not receive Electric Radio but if you don't, drop me a line and I will look up his ad when I get home.
As a side note, I bought a National NC-300 from a bonehead in Pensacola, Florida about four months ago. His packing was horrible and it was badly damaged. I took it to a local auto body shop that specialized in "specialty finishing" (i.e. antique cars). Although it cost me $150 and was tied up for over two months, they did a beautiful job. You might consider this if the Electric Radio guy doesn't work out.
Vintage boatanchor best wishes!

Steve,

I am probably at risk of opening up a wound like I did a couple months ago when I responded to a newsgroup posting lamenting the demise of grammar. I guess I did not learn anything because your posting pushed one of my hot buttons and I will probably unleash another torrent of angry responses.
I like to help guys out. When I have a manual I am always too happy to share it. About two months ago there was a guy on this newsgroup looking for a manual for a Hallicrafters S-17/SX-17. As I often do, I emailed him that I had one and would be glad to copy it. He wrote back wanting to know the cost. I said not to worry...I would copy and mail it without any charge. Do you think I could get a "thank you" out of this drip, much less a buck or two to cover my expenses?
Right, I offered to do it for free. But wouldn't basic courtesy dictate this guy at least take it upon himself to let me know it got there and say thanks?
Of course not.
Fortunately most guys are terrific and usually send money anyway (which I always return). IT ISN'T THE ACTION OF SENDING MONEY...IT IS THE GESTURE OF SHOWING YOUR APPRECIATION.
You are, unfortunately too correct: "Please" and "Thank you" are dying, too.
Guess this is all part of the "New Era". The "ME!" Era is all too prevalent these days whether you are talking about No code licenses, Air rage or, sadly, basic human courtesy.

Source record: 61594

I may be wrong then. But it sure looks like one to me. It's 16 &3/4"
wide and 7&5/8"high and 7&1/2"
deep. It has the 10 pin jack strip
(female jacks) (+ two guides) mounted on the inside top. And the
4&3/16" square calibration chart is on the front, lower middle. Also,on the
front panel are: the P.A. tuning (vernier drive) , Ant. coupling - 6 position
switch, M.O. tuning with lock, and
a Band Change Switch with two positions. The other tuning units I have do not
have that last switch.
In the upper left corner it says MPF-L.S.D.
DEC-50. Stamped in the upper middle is MFP3/45. And the two handle to grab on
to.

1744. KWM2 Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-14 00:00:00 UTC
From: Ross <nross@bigpond.net.au>
Message-ID: <Zk%v5.8973$tj4.57373@news-server.bigpond.net.au>
Source record: 61606

G'day, Im part way through restoring my first Collins station (made before I was born) and have struck a problem.

I have a complete KWM2 station with all accesories including the 30L-1 amp, and EXT VFO, even got original manuals dated 1961.

I ordered a heap of cosmetic parts from Suprlus Sales (great service), cleaned it all up, put new electro's in the PSU and 30L-1, crossed my fingers and turned it all on.

Luckily everything works fine and the RX seems to be just as selective as my newer radios

TX tunes up fine into a dummy load also with full output.

My questions......

1. I got no mic with the station, closest Ive found in the junkbox is an old Hi-Z Yaesu desk mic which I think will be suitable, it has a standard phono plug which is a bit big for the KWM2...is the mic socket a special type? Cant find anything correct size in Australia and dont really want to butcher the radio sticking in a phono plug.

2. Does the mic jack support PTT operation? The manual seems a little vauge on this...does it just operate in vox mode or needs an external PTT switch from the rear panel jack?

3. The power supply (516F2) has a tap for 240V mains but Im currently running it from 110V via a giant stepdown transformer...Id rather use 240V but had blew a transformer a few years back in a surplus HP high current lab supply which I was told was due to the xfmr being designed for 60Hz operation only (50Hz here)

Thanks
Ross

1745. L@@K!! FS: 2 Collins stations Two Days only!!

From an ESTATE....They go on Ebay Friday, if you dont grab em at bargain prices today...A complete 75S1--32S1 station with console and power supply...in good to VGC , power supply is unknown, but appears fine...trans and rcvr work fine. Exact same in 75S3 and 32S3......The fuses and holders are gone from the powersupplys...dont know why..so you need a fuse and a fuse cap in the 516F2's....AS is but transmitters and recievers working, I think the 516's will too!! pictures at..... www.iglobal.net/pub/radioranch/75s1.jpg ....and the S1 station 4 pieces is $1450. plus shipping firm......S3station is $1750 plus shipping.... professionally boxed (double) all manuals and cables!! I dont know a lot about this, but I know a bargain in Collins when I see it...these are NICE!! Thanks 73 Murray

Hi Ross,

> G'day, Im part way through restoring my first Collins station (made before I
> was born) and have struck a problem.

;-). My S-line was made in 1967... and I was born in 1968, so I am in
same case!

<snipped>

> My questions......
>
> 1. I got no mic with the station, closest Ive found in the junkbox is an old

> the radio sticking in a phono plug.

It is an 'special' plug, used in avionics. It is called PJ-068 and is
not so uncommon. You will sure get some offers, for about US$8 each.
What I did is to build an adapter, with a PJ-068 in one side and an
aerial stereo phono plug in the other side. All my old microphones have
an stereo plug attached, so I can use them with other rigs (with another
adaptor, if needed) and also with the Collins S-line and KWM-2A.

> 2. Does the mic jack support PTT operation? The manual seems a little vauge
> on this...does it just operate in vox mode or needs an external PTT switch
> from the rear panel jack?

Yes, it supports standard PTT.

> 3. The power supply (516F2) has a tap for 240V mains but Im currently
> running it from 110V via a giant stepdown transformer...Id rather use 240V
> but had blew a transformer a few years back in a surplus HP high current lab
> supply which I was told was due to the xfmr being designed for 60Hz
> operation only (50Hz here)

I use all my Collins with 50Hz and have no trouble. They were designed
for both frequencies. And _some_ 516F-2 have dual windings in the
primary, so you can put them to work at 240 or 110VAC. I have two
516F-2, one with dual primary winding and another without it. But no
problem with the frequency.

Hope this helps!

Regards from Spain,

JOSE

Hello Ross. First, reading from the Collins manual for the 516-F2 (dated 15 July 1974), the specs say 50-400 Hz. It does call for a removal of a cap for the 400Hz case. I cannot confirm that an earlier version of this supply will encompass the 50-400 Hz input frequency, but recalling that this stuff was designed for MIL use, one might assume (well..maybe). An early 75S-1 book says 50-60 Hz, so (again) one could assume that Collins designed the series to (at least) operate on 50-60 Hz. Finally, on the 516F-2, mine all operate on both 110 and 220 VAC. I'm not sure if earlier transformers had the dual primary windings, however.
Regarding the mic, that's an easy one! The mic plug is a PL-68; the de-facto standard military mic in the US and NATO until the "old" and "new" family plugs as used on current tactical ground radio equipment and/or the U-92/U93 4-pin plugs used in the airborne case. On the PL-68, tip is PTT, ring is mic, and the barrel (whatever) is ground. A hi-Z mic is appropriate for the S-Line. Your friends at Surplus Sales have the PL-68, albeit at a bit high price. Should you come up dry, I have plenty of them. Regards and good luck with your gear. 73 de Jeep/K3HVG

From: mike@corn2.freeserve.co.uk (Mike W)
Subject: 1940's UK School Reciever

On Tuesday next (12th Sept), at my local Auction house there will be auctioned a rare and probably unique reciever.

It was built specifically for UK Primary Schools in the mid to late 40's and was only distributed to them by the UK govt. It was never available for purchase by the general public AFAIK.

Called a Pri/Special Six Reciever and built under contract to the UK Govt./ BBC by "Sound Sales", it is a Long and Medium wave reciever, using Octal and 5 pin valves, built on a steel chassis and housed in a steel "Hammerited" case which is showing slight signs of corrosion due to its being stored in a garage for the last 30 years.
It appears complete, and while it probably does'nt work at the moment there is nothing to prevent a rebuild, probably just replacing the condensers and high value carbon-rod resistors.

The Auctioneers estimate of the "hammer price" is 30 UK pounds, but this could be exceeded by orders of magnitude, depending on interest at the sale.

If you would like me to bid for this article on your behalf then please E-mail me with your maximum bid and I will buy for you at the hammer price.

At the sale there is a 10% commission payable on the fall of the hammer.

The Reciever probably weighs in the region of 50-60 pounds and its dimension is approx 18" cube. While built to withstand school usage it will need careful packaging to ensure safe transportation.

At the same auction sale there are two 1940's, or possibly earlier, crystal sets. They appear to be homebuilt as there are no manufacturers marks visible.

Subject: 3-1000 Chimney

You might want to go into a company that stocks "Coleman" gas lanterns, look
at their chimneys, buy one and take it to a professional glass cutter, who
will cut and polish it to length. It's an old trick but a goodie! Helluva
lot cheaper too!

Subject: Help, help

I purchased a Hallicrafters SP 44 Panadapter for what I thought was a good price, only to find that the power transformer smokes. Seems like an internal short on the 200 volt winding. Does any one have a replacement or junker available?

Thanks,
Joe

From: "D. S. Platt" <jeepp@erols.com>
Subject: Info: Collins mech filters (interchangeable?)

I have some of the smaller filters as used in the S-line and would like to adapt 2 of them for a 75A4. Looking at the schematic of both the 'A4 and the 75S-( ) receivers, the circuits are all but identical. If the A4 has the B+ mod, any reason why I can't rig the S-line filter(s) for the 'A4? Thanks

Hello Dave,

Here's a link to several different manufacturer's data sheets on the
5687.

http://www.wps.com/archives/tube-datasheets/Indices/5687.html

I have a few dozen of them that I'm trying to sell! Any takers?

It has an unusual base pinout arrangement that makes for neat wiring in
pushpull or grounded grid circuits. Only a very few tubes have that
pinout - the 5687, 7044 and 2C51 are the only ones I know of.

From: donsmerz@my-deja.com
Message-ID: <8pr8sm$gl0$1@nnrp1.deja.com>
Source record: 61625

The summary histories that I have seen say that R.L. Drake founded his company in 1943 but didn't produce his first "short-wave" radio until the late 1950's--the Drake 1A.

My question is: What was Drake's first radio receiver?

I nominate this little guy:

Signal Corps U.S. Army Het. Monitor BC-1255-A made
by the R.L. Drake Company under order number 674-DAY-44.
It's definitely a receiver, covering 70-150MHz, with 3 firebottles, running from batteries, in a 6" cube. Fully-tunable but no BFO or other receiver-like features.

Can anyone the refute (or support)my nomination that this unit was R. L. Drake's first radio receiver? Does anyone have any manual or other information on this radio?

I have for sale a matched pair of Svetlana 4cx800a tubes. These tubes are Soviet military surplus, and are very rugged well made tubes. These tubes are in great shape, they have NEVER BEEN USED. These tubes will produce as much wattage as any Svetlana 4cx800a sold by any tube distributor, period. The tubes do have a 90 day warranty.
The price on the matched pair of 4cx800a tubes is $200.00 plus shipping.
The price on the 4cx400a tubes is $90.00 each plus shipping.
I also have the SK1A sockets for the 4cx800a tubes. The price on the sockets is $39.95 ea. plus shipping.
Thanks for your time.

Source record: 61632

Needing some wisdom from any old timers (I've been a ham for over 40 years so I'm no spring chicken myself) that have experience building link coupled tuners. With a fixed or adjustable link, there seems to be quite a few variations on whether one or two variable capacitors are used, for example, one on the high impedance side and one on the low. Some show them in series, some in parallel. Know of any accepted designs that have proven to be the best overall? The handbooks I've checked don't address this issue.

Thanks for reading the posting.

Source record: 61634

* * * C A U T I O N * * *

RE: SELLER "MULTICOMM2000" (Martyn Allison)

Dear Buyer:

I will try to be brief.
I was a bidder on Martyn's "Yupiteru MVT-9000 MKII" back in early June. I was not the final bidder. However, thru e-mail Martyn told me he was going to England in a week and was bringing back 12 more.

Long-story-short….
On June 13, 2000 -- $473.93 was charged to my Visa acct. to "Multicom2000 Ltd." Huntingdon, GB (which I later learned is Martyn's company in England - which he is closing).
web address: http://www.multicomm2000.com/page2.html

He said he would ship item upon his return (3 weeks).
It is now 3 MONTHS latter… No item…. No more e-mails… No nothing…'till now.
Martyn has suddenly posted 101 items on e-bay. When I e-mailed him that I was writing this note to his bidders I finally got a response.
Basically: …Hold off for a week… he'll look into it.
By that time, you will have sent your money. Good luck.

Moral…
Be very very careful - especially with large amounts.
Use an escrow service if possible.
Above all: Proceed at your own risk!

Finally…
I'd be happy to answer any questions or forward any e-mails I have had with Mr. Allison.
E-bay and these newsgroups are a great marketplace ….Don't get burned. I did.

Hope this may help someone.

Sincerely,
Paul Cecchini
Chicago, IL

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday September 17th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.

Non prepaid vendors will only be admitted if
space is available. :-(

Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

>terminals. "A" "Z" "G" in that order. I know the "A" stands for antenna
>and the "G" stands for ground but the "Z" connection has me a bit
>confused.

This scheme is used on many receivers, with some variation on the designations. It is to accomodate either balanced or unbalanced inputs. For unbalanced, such as would be used with center fed dipole, the A and Z connections are used and the G terminal is either left unconnected, or run to an earth ground. For unbalanced inputs, such as a longwire, the Z and G terminals are connected together and the feedline is connected to A, as you have done. The G terminal may still be grounded if necessary for other reasons.

Automatic Volume Control....Automatic Gain Control. Basically same
same.
>
> Noise Limiter - Same as noise blanker?

It is essentially a Noise Blanker of its day. Probably just a diode
circuit that choppes off the peaks.

>
> Selectivity - Is this at IF or AF? What it doing?

IF Selectivity. Usually using a R/C circuit.

> The Hammarlund HQ 110 has 4 controls I am not familiar with:
>
> Q multiplier - Is this a "notch" filter? Not usually although it can
create both a notch and a peak. Usually a mechanism to cause regeneration
of an amplifier stage using an almost oscillating tube and tuned circuit
>
> AVC - Same as AGC? AVC is typically a simple AM radio detector feedback
system to keep the volume level fairly constant, AGC has a much broader
application that in addition to keeping audio levels fairly constant, it
also keeps stages from overloading or from pumping or over loading such as
in SSB.. TVs used a form AGC known as Keyed AGC. In the hammarlund unit it
is mostly and Audio Level control device>
> Noise Limiter - Same as noise blanker? Diode clipper as noted by another
mate. Noise blankers actually snip out the offending noise spike while a
limiter just reduces the peaks to some level that will allow the signal to
be heard with some distortion but without the annoying pulse noise.
Blankers, by definition, actually turn the receive chain off for the
duration of the offending pulse. Neither system is perfect.
>
> Selectivity - Is this at IF or AF? What it doing? Most often this term
is associated with the final IF in conventional receivers and can be
accomplished with L/C circuits or switchable filters. The hammarlund 110
uses adjustable (by switching in capacitors in L/C units to vary the
selectivity.

Hope this helps

The first 3 units have some genuine collector value, so hopefully you'll find a good home for them. The last unit, the TS-488 is (as I recall) an X-Band (9375 MHz +/-) radar echo-box. Its used to test an airborne radar system by receiving pulses, delaying them, and sending them back (typically) via a directional coupler or horn.

I have a pristine SB101 that I built in 1969, with power supply, heath speaker, heath swr meter, cables, manual and a heath microphone. The set is practically flawless, except for one small chip on the paint on the corner of the lid to the cabinet. The unit has been in storage for about 30 years. I had it looked at by a friend who is a real-radios-glow-in-the-dark guy, and he says that it is running a-OK. For this beauty I want $375, plus shipping. Please let me know if you are interested in a virtually flawless rig.

1809. Re: Drake's First Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-15 00:00:00 UTC
From: JM CHERRY <jmc@dproducts.be>
Message-ID: <8psv96kqv1@news0.skynet.be>
Source record: 61642

Dear Don, Gang,

I search and search again on the "net" about this famous BC-1255... I discover a famous site : http://www.gordon.army.mil/museum/ (directory with all military electronic items)

On this site i discover : BC-1255: Heterodyne Test Receiver, 75-150 MHz, P/O RC-183

I search again and i find : on http://www.nj7p.org/millist/m13.html
BC-1255 Receiver, 70-150MHz, vacuum tube, 6" cube, R. L. Drake
Those two informations confirms the description of Don.

CONCLUSION:
R.L. DRAKE produced this 3 tubes Heterodyne test receiver for the US Army.
It is a scoop ;))

Thanks to Don Merz, N3RHT who discover and own this receiver... Don, please take a lot of pics(inside, outside) for all the R.L. Drake enthousiasts... (i will refund all your charges if you want)

Conclusion 2...
When you are enthousiast and share your information, you can always find wath you want. The net family is not so bad ;)

Best regards, 73

JM CHERRY

The Hammarlund HQ 110 has 4 controls I am not familiar with:

Q multiplier - Is this a "notch" filter?

AVC - Same as AGC?

Noise Limiter - Same as noise blanker?

Selectivity - Is this at IF or AF? What it doing?

You are welcome to respond to me as well as the group. Thanks. Brian N7RVD

1811. Antenna connection on antique Zenith receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-15 02:15:00 UTC
From: n4zou@my-deja.com
Message-ID: <8ps0mn$d2n$1@nnrp1.deja.com>
Source record: 61638

I have a nice old Zenith console receiver model 7-S-260 with chassis # 5709. On the back of the chassis are three antenna terminals. "A" "Z" "G" in that order. I know the "A" stands for antenna and the "G" stands for ground but the "Z" connection has me a bit confused. The schemitc shows a jumper from "Z" to "G" and the radio receives ok on all three bands with a jumper from "Z" to "G" and a long wire connected to "A". Also on the schemitc it shows "A" and "Z" connections to the band switch. I would like to put a receive loop on the radio where the loop antenna would be switched in for use on the AM BC band and the long wire on the two shortwave bands. Do I remove the jumper and connect the loop across "Z" and "G" or from "A" to "Z" and leave the long wire antenna on "A"? I am in the process of restoring the radio and have all new capacitors ordered to replace the old paper capacitors in the receiver. The only things I had to repair to get it operating again was to replace the power cord, the dial string, and the output matching transformer on the speaker.

Interesting Hal,

How do you justify charging $35 for 30 sec. of airtime on WBCQ
when Al Weiner is charging you $50 for an hour???!!!! Gee....isn't
capitalism great! I think you may have an idea here, but the $35
charge is a bit too much. How about $5 per 30 sec spot? You may
get a few more respondents....

That guy has been spamming ever since I joined this N.G, my best guess is
desperation.
Not in it for the love of the hobby, just running a business to squeeze
every penny.
HEY "Nothing wrong with anyone making a profit but dont be a obnoxious pain
in the ass at it"
I put these guys in the kill file.
With Outlook or Outlook Express go to the inbox assistant and set it up.

Kind of reminds me of the Johovas Whiteness that harass and want to force me
to read stuff every year.
I finally got a fix for that:
Get some black candles and share them with your neighbors.
Light them when they work the area and place in driveway or front door
steps.
Draw some nonsense scary symbols in kids washable chalk.
Sit back and watch em run away chanting and screaming.
LOL :)

For sale:

Some Dow Key relays to sell. There are several types, ranging
from $20 - 32.00

You can have a look at the pictures and details at:

http://home.cfl.rr.com/happysurfer/relays.htm

Also, I have a bunch of nice meters - great for homebrewing or BA
repairs.

They range from $1 to $8.00 each - there are Collins, Gonset,
National, Barker & Williamson, Hallicrafters, Lafayette etc.

S-meters, plate current, voltage, VU meters for radios and audio
as well as VU meters for tape recorders etc.

The are all listed in detail with pictures and dimensions etc. at:
http://home.cfl.rr.com/happysurfer/meters.htm

They didn't sell well.

I think it was HyGain's only attempt to break into the HF transceiver market.

The price was just too high and hams didn't buy many of them.

Yes, I suppose if one is a collector of HyGain HF rigs (surely there must be someone?) then this might be considered rare!

I always thought they looked cool, and checked one out in a store one day. It seemed to be good, but of course they priced themselves out of the market and it never caught on!

I had the HyGain "Giant Brick" 2m HT with 6 crystal controlled channels and a touch tone pad that was added after-market.

Did a great job for us with one watt, as long as the repeater was close by... and weighed more than a real brick!!

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

09/13/00: AUSTRALIA GUN CONTROL RESULTS IN CRIME INCREASE

In 1999, Australia engaged in the most massive gun control effort in history. Nearly seven hundred thousand guns were turned in by citizens, under a new and stringent gun control law. This is the first national experiment in serious gun control, in a society in which guns have previously been relatively freely available.

Initial statistics reveal the following new trends in this previously low-crime society:

Australia-wide, homicides are up 3.2%

Australia-wide, assaults are up 8.6%

Australia-wide, armed-robberies are up 44%

In the state of Victoria, homicides-with-firearms are up 300%

If these statistics prove valid, they should be a warning to gun control advocates that law-abiding citizens should not be denied gun ownership unless an effective means can also be found to deprive criminals of their guns.

The problem with such laws is that when large numbers of law-abiding citizens give up their weapons in societies that have allowed weapons possession, only the criminals remain armed.

Message-ID: <39C42F22.2C9EB803@msu.edu>
Source record: 61415

The 32S-3 is in very good + condition with original paint. There are some minor surface scratches in the case, but I could not get them to show in the pictures. There are no dings. The face is beautiful and unblemished. I just took this out of service and it is in excellent working condition. The serial number tag is faded. See pictures at

http://tcimet.net/~shs/32S-3/32S-3.htm

The 516F-2 is in similar condition also just removed from service. There is some minor cabinet distortion in the rear bottom corners. I have not tried to straighten it. See pictures at

http://tcimet.net/~shs/516F-2/516F-2.htm

I will sell the pair for $830 (including careful double box packing) plus actual shipping expenses by a carrier of your choice.

>
Hello, generally, no...If you were turning it on and off many times a day, the tubes may experience faster wear due to thermal cycling and related wear. Heating up and cooling down of the components also has an effect on sensitivity and frequency drifting.

Shut it down when finished and save your electricity, and also stay safe...old tube equipment shouldn't be left on while unsupervised for long periods of time.

Happy listening ! Besides being well immersed in the vacuum tube hobby, I have a few shortwave and general coverage tube rigs myself.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono,alt.ham-radio.marketplace

For sale:

Hallicrafters S-107 general coverage receiver with bandspread tuning
for the ham bands.

Covers 550 kHz to 32 MHz and calibrated 47-55 MHz for 6 meter band.
the VHF band actually covers from about 20-75 MHz but is uncalibrated
for those parts.

Has 5 main bands, single conversion with ANL, BFO, standby switch,
bandspread tuning etc.

Front mounted headphone jack. Internal speaker in the top of case.

Excellent, working condition. This receiver was made 1958-1962.
Receives fine. Looks great...

All original knobs and paint. Front panel looks really good.
Case is not scratched up. There is a very shallow dent on one side,
but it is virtually un-noticeable and can easily be fixed.

Looks somewhat like a miniature version of the SX-140.
Same knobs and color scheme.

Would be nice to add this to any Hallicrafters collection.
Or great as an extra receiver for the bedroom or kitchen.

Pictures available at:

Get a catalog from "ANTIQUE ELETRONIC SUPPLY"

You can find a link to their web site (which is SLOW to load, but has
the prices for many tubes)

The link is from:
http://dmoz.org/Recreation/Amateur_Radio/Boatanchors/Tubes/

This directory ALSO has links to a number of other tube sellers
who will have any other tubes listed.

Most people sell tubes for about HALF what AES does, unless they are
selling too audiophiles in which case the prices are multiplied by 4
or 5.

If the audiophile buyer is in JAPAN, and the tube is a TRIODE
then you can multiply the price by about 8 or 10 - he he!

Seriously though. Have you searched the web first?
That always works the very best for me.

I hope that helps.

rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono,alt.ham-radio.marketplace,rec.audio.tubes

Please note - I have for sale:

Some Dow Key relays to sell. There are several types, ranging
from $20 - 32.00

Take a look at the pictures and details at:

http://home.cfl.rr.com/happysurfer/relays.htm

Also, I have a bunch of nice meters - great for homebrewing or BA
repairs.

They range from $1 to $8.00 each - there are Collins, Gonset,
National, Barker & Williamson, Hallicrafters,
Lafayette etc.

There are S-meters, plate current, voltage, VU meters for radios and
audio as well as VU meters for tape recorders etc.

The are all listed in detail with pictures and dimensions etc. at:
http://home.cfl.rr.com/happysurfer/meters.htm

NOTE! The meters on the web page are the only ones I have right now.
Before anyone asks, no I DON'T have any brand "XYZ" Model "123"
VU-METERS!
Sorry!

Remove the "NOSPAM" from the e-mail address when responding to this
message.

Thank you for reading this!!

It is a known fact that the reason SOME of the prices on eBay have
"spiked" is beacuse some folks cheat and bid up their own auctions.

This is supposed to be against the rules, but with the internet it is
easy to take on multiple persopnalities and no one - including the
folks who run eBray, is any the wiser.

There have been some cases recently where a number of folks have been
caught doing this. I have heard about it on the news somewhere.

Check it out before you get jazzed by those "FA" ads for eBray
auctions and stop wasting time bidding on things which will often go
to someone else anyway.

Just my perspective. I really don't use the auctions, and for a
variety of reasons.

EPA notice: "Your mileage may vary from mine!"

As an aside Roger, I once worked Upper Michigan from my house in
Tennessee onn 432 MHz during a contest.

I was running 18 watts to a 20 elememt satellite beam aimed
hoirizontal (and north of course!) and the beam was only about 15
feet above ground.

We had S-9 signals both ways for a few minutes there! Phenomenal.

Never give up on your QRP boatanchors for 450, hi hi!

Source record: 61428

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve/wknd.

> Seems to me!

Also, doesn't the seller have to pay a commission to eBay at the time of the auction closure? If you are bidding on your own item, it seems like you would be selling to yourself, and paying eBay a percentage just for the pleasure of it.

I suppose the "seller" would have to claim that the "buyer" backed out for some reason. I would imagine that eBay must have some kind of tracking to watch for kind of abuse. Seems like eBay would be very sensitive about not getting their commission!

The thing about eBay that bothers me is the automated bidding software that waits until the closing seconds to pump in a bid. I have seen auctions run for a week with only an opening bid, then a flurry of minimum increment bids hit in the 5 minutes before closing.

Now, I'm not bitching that this is illegal; it isn't. But part of the auction process is the social interaction of the bidders. There's the interest of watching the bidding process, with the bidders drawn along by the competition. And there's the smug feeling of remaining high-bidder for a long time, thinking that you have secured an item.

The automated bidding chills both of those forms of auction participation! True, from the bidder's perspective, these automated bidding programs are a good strategy to avoid public interest from bidding up an item. But pretty soon, auctions will be won by dueling bidding robots, with the winner determined by the luck of a packet slipping in just milliseconds before closing.

1870. To oppose EBAY is UnAmerican

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-17 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000917103247.10754.00000330@ng-cv1.aol.com>
Source record: 61436

EBay is the ultimate free-market environment. The capitalist system is at work here. Money talks, BS walks. It is truly a fair way to dispose of goods.

If someone is willing to pay what is (to you) an inflated price, then the free-market has ruled and found your appraisal of worth to be wrong. So be it.

Will there be manipulation of pricing? Probably, but in our laissez faire business world, this is norm...indeed the Ameican way. Remember, people are not forced to bid, and even if they have second thoughts, the can retract that bid prior to the auction end.

There's nothing to prevent you from offering the same goods at lower prices (lower minimums) to prove your point. What's that? You don't have an SX-88 to put out for bidding? Must be a rare unit, eh? And if you do have one and it gets bid up to $3K, so you offer it to the winner for $500 just to prove your point. Hmmm, what medication are you on?

I often wonder about widows of hams who are stuck with a basement full of stuff, and plan to rent a dumpster and fill it, or sell it for pennies on the dollar to local hams, just at a time when they (the widow and the kids) need every penny they can get.
EBay is the ONLY solution for them to get true "fair market" value.

Oh, there's a better way? Let's hear about it.

1871. COLLECTIONS to museums??? Write a will?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-17 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000917104130.10754.00000331@ng-cv1.aol.com>
Source record: 61437

As I pass the six-decade mark, I wonder about what will happen to my collection of radio rarities after I die.

Although my will provides for eventual donation to a museum, there's a good chance my widow or kids will bring in a dumpster and cart it off first. Some, of course, is not rare, but does not deserve destruction.

There are only a half-dozen radio museums, and to me they appear to be understaffed and underfunded. They may not be able to collect and appraise this stuff.

I've brought this issue up before, but would like to re-open it for discussion. How do we keep our precious "babies" from the waste heap and put them where others can share in the enjoyment and wonder of this shortwave craft.

Commonplace items could be put on EBay, but what about the real rarities? And, how could my estate benefit from any tax credits for donations?

C'mon guys, let's hear some thoughts on this.

1872. FT-101 EX

I totally agree with you. The only thing I don't like about eBay is the timing of the auction close. That is, the auction ends at a preset time, so the best strategy as a buyer is to wait until the last few seconds and bid your maximum amount (sniping). There is no advantage to bidding earlier, that only creates interest in the auction and raises the eventual price.

I think a fairer way for both buyer and seller is to extend the ending time (by another minute) if bids have been made within the closing minute. So the auction would extend and remain open as long as bids come in at least one per minute (or some such frequency). This could result in higher prices for the seller and elimination of sniping for the buyers. I've heard other auctions may work this way, but don't know for sure.

1876. Re: Tube Radio Question - Ham-BoatAnchors Digest V2000 #254

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-17 00:00:00 UTC
From: john@jpower91.FReeserve.co.UK
Message-ID: <001801c020bd$83dbc5e0$0f23883e@gm0kto>
Source record: 61442

In connection with the question about leaving tube rado equipment on permanently, at home during the 1960's we used to have a Regentone domestic radio. Not long after the BBC got rid of the Light Programme, the Third Programme and the Home Service, replacing these with Radio 1, 2, 3 and 4, the old set's mains transformer started smoking heavily (in protest?). It was promptly disconnected from the mains by my safety-conscious father, and given to me to cannibalise. Had the set continued to smoke in this way, it would have gone on fire. In an unattended room, that would have been disastrous.

Ex-WD equipment was designed to be left on permanently. This assisted in keeping the frequency stable, and avoided drift, as the radio would be at a steady temperature. I'm not sure what they did for maintenance. Perhaps a spare receiver was left on, so that the other could be disconnected for tests and any repairs that might be necessary. I believe that most of the equipment had built-in reliability. The fact that many of these receivers still work today bears testimony to the original quality.

Components do age however, and a set which might have been OK to leave on fifty years ago, today might not take too kindly to being left on permanently.

FOR SALE/SWAP
Pye T30 transmitter / R8 receiver : low-band AM base station, with tulip microphone and desk control unit. £15 (Fifteen Pounds Sterling)

Storno CQM713 (150Mhz) radio-telephone and accessories. £10 (Ten Pounds Sterling)

Acoustic Research turntable. Needs new drive belt, as well as stylus for the fitted Shure M93E cartridge. £15 (Fifteen Pounds Sterling)

Magneta public address amplifier : mono : about 15w output from two 6V6 valves in push-pull: will take medium output crystal cartridge (250mv) or dynamic microphone £30
(Thirty Pounds Sterling)

John, GM0KTO. Offers welcome. I'd be willing to do a swap. I'm looking for a diamond stylus for a Shure M75B type 2 cartridge. Also thinking about a sound card, printer, and scanner for the pc.

I'm in about the same boat as you. Probably the smartest thing for both of us is to dispose of the equipment whilst we are able. While we both enjoy admiring (and maybe even acquiring more) the practical thing once you are over 60 is to start the disposition process.

I've seen it happen many times, a widow saddled with the chore of weeding out what's what and especially with frail health, a rather difficult task. Of course local hams would want to help, but in many cases these aren't as aware of values as you or I.

I've seen where well meaning hams have placed a 'value' on items exceeding its real worth, prior to a local auction. This resulted in major unhappiness due to the widow halting the auction because she thought the locals were trying to take advantage of her.

We both would be more considerate of our widows by disposing of the stuff before they are widows. :-) If you are keen about supporting a museum, since most are underfunded, why not dispose of the equipment yourself, donating not only the rare items, but funds from the less rare to the museum of your choice?

We need a term for bidders who keep bumping up their maximum bid until they get the high bid -- how about "pecking"? I've never understood that practice. If the pecking bidder starts at $10 and ends up bidding $25, how did the item go up in value in his mind 150% in two minutes? Sniping (last-second bidding) is the best protection against pecking, and your suggested change would just reward pecking. I don't mind getting sniped, since it's an all or nothing shot, but I *hate* getting pecked!

Can't you gift the items to the museum now, with the agreement that you
can continue to use the items until you [decide, or die]? Or something
like that? Might you get an immediate tax deduction (for the "right
kind" of museum)?

This Drake TR-4CW is almost perfect in everyway..you wont find any
chassis corrosion anywhere....the front and case is beautiful with
original Drake paint.
The rig comes with the 500hz filter and the optional noise blanker and
the original manual.
You fellas in Japan are welcome but shipping could be a little higher...
Im keeping the AC-4 for my C-Line...sorry.
$550 plus shipping The rig can be seen at my web site:

I picked up a Heath SBA-300-4 2 meter converter (for the SB 301,etc?) It appears complete except for the crystal. If anyone can tell me what the frequency and type of the crystal should be, I'd appreciate it very much.

There is another abuse which you haven't dealt with as yet, and this one hurts sellers. Its called "Bid Shielding." Visit the Town Square and other seller boards on eBay to get the full scoop, but in a nutshell it works like this:

Three or more bidders(or one bidder with 3 screen ID's) get together on an item one of them wants. The one who wants the item places a low bid early, before the auction takes off. The others follow right after, placing rapidily escalating bids, until the bid price is mostly out of reason. This discourages other bidders EARLY in the auction, so they don't bookmark the auction to watch in the critical closing minutes. During those last minutes, the two buddies RETRACT their high bids, leaving the item to sell below value to the friend who placed the low bid early on.

I have seen bidders who have as many as 50 bid retractions!

Next time you lose an auction, check the "Bid Results with IDS," and check for bid retractions.

A word to the wise: Not all the "Museums: are what they appear to be! Denver hams generously gifted a new local museum, only to have the "curator" load up the stuff and leave town. The were gifts and loans of equipment, donations of time and materials to the building, and monetary gifts as well. So look carefully before you give.

We also have a military museum here at the old Lowery Air Force Base, called "Wings Over the Rockies," and they accept donations on military equipment.

If the bidders were all experience, and knew the value of the merchandise
that would work. Unfortunately many bidders just don't work that way. They
figure that if some one else goes that high then it must be worth it. Also
may inexperienced bidders (and some experienced) get caught up the "moment"
and go far beyond what they had planned.

Some of the stuff is really worth what it goes for and to a collector who
really wants something they may not mind going well beyond the normal market
value.
However there have been some real "rust buckets" sold at some pretty high
prices. in the last few weeks.

Not quite...they are playing the odds of getting a live one going.
Even if they lose two out of three, it doesn't take much of an elevated
price to come out ahead.

>
> I suppose the "seller" would have to claim that the "buyer" backed out for
> some reason. I would imagine that eBay must have some kind of tracking to
> watch for kind of abuse. Seems like eBay would be very sensitive about not
> getting their commission!
>
> The thing about eBay that bothers me is the automated bidding software
that
> waits until the closing seconds to pump in a bid.

It doesn't work quite that way.
IF you bid, say...$300 on an item (assuming that you think it's worth
that) and the present bid is $20 then your actual shown bid will probably be

$21, but the "system" knows you have committed to going as high as $300.

Now, in the closing minutes some one bids $30, it will take your bid to $31. It can get fast and furious if there are four or five in there after that same item, but it takes some one bidding against your $300 to bring up the price to the $300 level.

> I have seen auctions run
> for a week with only an opening bid, then a flurry of minimum increment bids
> hit in the 5 minutes before closing.
>
Happens quite often as the other bidders don't want to over committ.

What I don't like are the hidden reserves. You are bidding, but not knowing how high you have to go before the seller will accept the bid.

> Now, I'm not bitching that this is illegal; it isn't. But part of the
> auction process is the social interaction of the bidders. There's the
> interest of watching the bidding process, with the bidders drawn along by
> the competition. And there's the smug feeling of remaining high-bidder for a

>
> The automated bidding chills both of those forms of auction participation!

This form of bidding is not just the on line auctions.

> True, from the bidder's perspective, these automated bidding programs are a
> good strategy to avoid public interest from bidding up an item. But pretty
> soon, auctions will be won by dueling bidding robots, with the winner
> determined by the luck of a packet slipping in just milliseconds before
> closing.
>
Not at all, as the bidder had to bid (and committ) the full amount up front and it may save them some money as oft times the bid does not get all the way up "there" although many times it does.

I do think that the value of items is getting inflated due to bidders getting carried away.

The problem with eBay is they advertise insurance to cover fraud and misrepresentation, but they have a $200 maximum with a $25 deductible. My advice is never bid more than $200 that way you only lose $175 when you get hams with no ethics who misrepresent what they have for sale and figure that it is your problem because you bid on it. That is not capitalism, it is theft through deception. I lost $302 dollars to W4WWB who advertised a parts radio as "complete, but needs some work" It came missing most of the hardware and a circuit board. Now it is up to me to try to get eBay's insurance to re-imburse me $175 since W4WWB will not honor the fact that he lied in his description. Free enterprise BAH HUMBUG!

>of radio rarities after I die.

Consider willing them to a younger ham(s) that have demonstrated a genuine appreciation in BA, and have a proven track record in maintaining and running boat anchors. I'd rather see that then having my BA gear sitting on some shelf collecting dust in a museum. Time will come when it may not be possible to keep these beasts on the air...then, let them sit on the shelf.

Try Elmering some kids etc at your local radio club so that interest in BA will flourish -- that's what I'm trying to do. In a world where radios are pushbutton only, I think BA can be a real interest to some kids.

Source record: 61472

Hi Gang --

I've just started a complete restoration of a B&W 5100B, which from the looks of it, must have sat in a garage for a loooong time. Quite a lot of caked dirt and some rust on the main chassis. Fortunately, the chassis underside, and the interior of the subassemblies, are quite clean.

I removed all the subassemblies which left an essentially bare chassis except for the transformers in the rear. I managed to get most of the dirt and rust off by using isopropyl alchohol and fine grade steel wool. However, there are still some small areas where I can't get the chassis clean. It's smooth, but not clean. I tried Naval Jelly, and that didn't work. Perhaps these splotchs are not rust? If not, could anyone tell me what they are?

Also, this would be a good opportunity to coat the chassis to prevent future rusting. Any recommendations? I was thinking of Rust-Oleum Crystal Clear Enamel.

Thanks!!

1912. Re: To oppose EBAY is UnAmerican

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-17 00:00:00 UTC
From: Lyn Lewis <weyesguy@USWest.net>
Message-ID: <EBgx5.906$Q45.492833@news.uswest.net>
Source record: 61478

Capitalism of the sort found on e-bay is only one small aspect of the "American way". The opposition to e-bay is not necessarily based on price. In what little experience I have of e-bay, I don't believe the objection most folks have to e-bay has much to do with price or the actual sale of goods. It has to do with the commercialization of what has been an amateur and folk art form to the perceived detriment of all, not just it's practitioners. I am not a ham, but it seems to me that the ham of old is a dying breed and that there is much less depth and commitment required nowadays.

The e-bay commercialism just seems to cheapen the whole thing. Most wise folk know that the real price we pay for things is rarely measured in dollars.

Hello,
A friend of mine just acquired a AM-494GR amp that was part of the AN/TRC-28 VHF FM radio set. It has 2 ea. 4CX150's? in the final. I believe it was used for work in the VHF HI Band.

Would anyone have any other information about this amp? We hope to be able to use it someday. Any information will be appreciated.

Thanks for the bandwidth and 73 de Joe N3IBX

>It is a known fact that the reason SOME of the prices on eBay have
>"spiked" is beacuse some folks cheat and bid up their own auctions.

Yes, that may be BUT there still needs to be another bidder out there for the number($) to rise.
To just bid on ones own auction just brings the number($) out of sight till they stop bidding or get scared away. If the real bidders just bid with thier "head" the "spiker" will have lost as his own game.
Seems to me!

Do people that pay top dollar on ebay for BA gear actually use them daily,
or
at least on a regular basis? Or, are they "trophy" radios that sit on the
shelf
for the push-button types to oggle at? I'm not stating your assumption is
wrong,
just wondering if there is any data (from you or others) to support it?

I still maintain we as BA lovers need to foster an interest in them for
future
generations to enjoy.

For the most priceless and rare in my BA collection, I have made an attempt to contact the family of the company or designer and make arrangements to send to them, when I could still enjoy the spirit of doing so.

I have been successful in getting one piece going back to a museum set up by the 3rd generation from the original designer. This is not always an option, but worth looking into if you want it to add immortality to your memory.

You are in best control while still living......

Gil,
If you mean markings like "103", it's simple (but not obvious). These markings work much like resistor color codes. The first two digits are the significant figures, and the third is the multiplier. The value is always in pf (uuf for boatanchors). Thus, in this example, the value is 10,000 pf, or .01 uf (or 10 nf). Values smaller than 100 pf usually have the value directly in pf, like "47" for 47 pf.

Older ceramic caps have the value in pf or uf directly marked, like ".01" or "82" -- you figure out whether it's pf or uf based on what's plausible (.01 pf would be nonsensical). Then there were some ceramic caps in the 50's with color codes on them -- any old ARRL Handbook tells how that works (and they aren't common anyway).

Source record: 61303

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=441461280

General purpose headphones suitable for shortwave and Amateur monitoring. Vinyl covered double headband with easily adjustable yokes for comfort. Powerful Hyflux Alnico magnets. 1 7/8" diaphram. 4 1/2 foot cords with PHONE PLUG. That's how the Allied Radio catalog described this headset. This headset is in very good condition. Please note that the impedance of this headset is 11 ohms, not 2000 ohms. The previous owner put 11 ohms on the headset as you can see in the picture. I verified this in my Allied Radio catalog, and they did offer both impedances.This headset is just the thing to complement your Knight Kit Star Roamer, R-55, or R100 receiver. Would also work well with the Hallicrafters and HeathKit lines.The headset is in very good condition and they work well. I guarantee that they will not be DOA, but as with any electronic item that's over 30 years old, I'm auctioning them off as is.

1936. Re: To oppose EBAY is UnAmerican

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-18 00:00:00 UTC
From: jtyburczy@aol.com
Message-ID: <20000918153120.07824.00000235@ng-cq1.aol.com>
Source record: 61305

Interest in BAs is naturally increasing without any help from publicity or club efforts, I think mainly because the baby boom generation has begun to take an interest in the rigs of their youth. Also, the BA market got a start in the 80's when Japanese collectors began to buy up Collins equipment.

If you think about it, it's part of a cycle, similar to collector automobiles. About 10 or 15 years after a model year is released there is virtually no interest in it and the value is at rock bottom. 20 to 25 years out, people begin to wax nostalgic about it. 30 to 35 years out, the prices skyrocket suddenly. At 40 years+, the value stabilizes and only responds to normal yearly inflation as the car takes its place in the roster of collectible/antiques.

Nothing wrong with free enterprise, but my beef with eBay is that it has helped to rapidly undermine the old ham tradition of making stuff available to newcomers at low prices (or for free). It may seem incongruous with modern society, but there was a time when many hams would practically give away an older rig (or some piece of needed equipment) to help get a novice on the air. Nowadays such stuff is sold "to the highest bidder". Sigh.

Hi, and thanks for reading. My father (also a ham) passed away recently, and among other equipment left me a 1959-vintage Grundig model 6099 table radio, all-tube receiver, that covers longwave, AM-BCB, SW 5.9-25 MHz and FM 87-100MHz (European FM band). It's a large unit, almost three feet long, 1 1/2' tall, and almost a foot deep - nice wood cabinet. Lots of nifty little features like an internal steerable ferrite antenna and a "magic-eye" tuning tube. Cosmetically and functionally it's in very good shape, and it has the original manual and schematic. I really have no place for it, and would like to sell it, but I haven't been able to find out the least clue to its value, despite searching on the net and getting wildly varying estimates from local hams and antique radio aficianados.

Could anyone give me a ballpark idea of its worth?

Thanks in advance for any and all replies...
73, de Fred N2FOZ

Yipes! Do not put anything on that chasis like paint! It can get into
everything and really mess up the joint. It will also crack and peel after time
from the heat in there. The discoloration of the chasis is ox that has found
its way into the metal over time. Just live with it. A light coating of deoxit
on a small swab or cloth can be applied to give it some lustre and protection..

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=441461280

General purpose headphones suitable for shortwave and Amateur monitoring. Vinyl covered double headband with easily adjustable yokes for comfort. Powerful Hyflux Alnico magnets. 1 7/8" diaphram. 4 1/2 foot cords with PHONE PLUG. That's how the Allied Radio catalog described this headset. This headset is in very good condition. Please note that the impedance of this headset is 11 ohms, not 2000 ohms. The previous owner put 11 ohms on the headset as you can see in the picture. I verified this in my Allied Radio catalog, and they did offer both impedances.This headset is just the thing to complement your Knight Kit Star Roamer, R-55, or R100 receiver. Would also work well with the Hallicrafters and HeathKit lines.The headset is in very good condition and they work well. I guarantee that they will not be DOA, but as with any electronic item that's over 30 years old, I'm auctioning them off as is.

Ox? You've got me on that one.

On the subject of the heat, are there any particular methods of applying tube designation labels? Granted, have laser printer, have labels, but I don't want them lifting off in a year or so. Anyone have any suggestions?

Thanks

> There is another abuse which you haven't dealt with as yet, and this one hurts
> sellers. Its called "Bid Shielding." Visit the Town Square and other seller
> boards on eBay to get the full scoop, but in a nutshell it works like this:
>
> Three or more bidders(or one bidder with 3 screen ID's) get together on an
> item
> one of them wants. The one who wants the item places a low bid early, before
> the auction takes off. The others follow right after, placing rapidily
> escalating bids, until the bid price is mostly out of reason. This discourages
> other bidders EARLY in the auction, so they don't bookmark the auction to
> watch
> in the critical closing minutes. During those last minutes, the two buddies
> RETRACT their high bids, leaving the item to sell below value to the friend
> who
> placed the low bid early on.
>
> I have seen bidders who have as many as 50 bid retractions!
>
> Next time you lose an auction, check the "Bid Results with IDS," and check for
> bid retractions.
>
> Kï¿½MB

And this will continue until some auction site has the guts to require a verifiable credit card charge with each bid, rather than simply paying lip service to a policy of hand-slapping repeat offenders. Knowing that your bid won't be registered until your credit card is charged, and that the charge will not be reversed unless someone outbids you, will have a chilling effect on these fraudsters. This method will also enable the auction site to pay the seller directly. No doubt such a site would attract only a small fraction of the traffic of eBay, but I'll bet it would be QUALITY traffic, all participants possessing current credit cards and all willing to put their money where their mouths are. I'll bet such a site would prosper when word got around that there's an auction site limited functionally to honest participants making honest bids.

Only up to that point. The seller can still be flummoxed out of whatever honest bid above the reserve price he might have gotten. And part of the appeal of auctioning is the prospect of getting more than the minimum you're willing to accept.

Message-ID: <i_jx5.95136$xg1.838219@news1.rdc1.sdca.home.com>
Source record: 61490

Auctions are popular because they offer rewards to both the buyer and seller beyond the simple monetary transaction.

The auction feeds the seller by giving him the impression of having maximized his return on the sale. That feeds greed and smugness.

The auction entertains the bidders with the competition to win the prize. If you drop out along the way, then you can feel smug about the fool who was willing to pay more than you. If you are the high bidder, not only do you win the gadget, but you have the conceit of having gotten a deal that nobody else was shrewd enough to capture.

You have to remember that an auction like Ebay runs is a very public place. Just like at swap meets and garage sales, you will get professionals (people who make their grub buying and selling, whatever; not people who like radios that glow) who will try to turn any transaction to their best advantage.

If you're a BA nut, just enjoy the action and don't get too hyped by any particular deal. If Ebay is causing you to burn and fume, you need an attitude adjustment. <grin>

As original author of posting, I want to to thank you all for replying.

I like the idea of extending bidding minute-by-minute if there's a last-minute flurry of bids. But EBay is unlikely to do so.

I am debating what to do with my radios; I'm beginning to lean towards auctioning everything on EBay, based on the assumption that if bid prices are high, there's a good likelihood the purchaser: (1)loves radios (2)will take care of it (3)will use it (4) will see to it that it remains in circulation when she or he gets to be 60+ years.

Fred Hammond died recently, as owner of an eletronics company, he had the firm build a museum of ham radio goodies. Trouble is, it is a commercial venture so donations are non tax-exempt, but more importantly, the "Board" could shut it down any minute.

Still looking for an answer.....

1963. FS: ** 717A "doorknob" tubes **

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-19 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20000919041344.06587.00001368@ng-fx1.aol.com>
Source record: 61339

I ended up getting a bunch of 717A tubes as part of a bulk buy that I did recently. I plan to keep a few, but want to sell off the rest. These were bulk packed, most appear to be NOS, but they were stored in an "egg crate" style tray, and not individually boxed.

All reasonable offers considered, small OR large quantities.

Please respond by email.

Regards,
Tom Mitchell

On occasion, I've been able to get setscrews for various radio knobs at hardware stores. Better hardware stores have a huge assortment of oddball hardware in pull-out drawers. Many of the larger lumber yards and home centers (Lowe's, Home Depot, etc.) also have them. Give it a try and you may find what you need! :)

Yes, it's an optional, external vibrator power pack. The original part number eludes me now. It's extremely rare, if found at all.

However, it'd be possible to operate the AR-88 from a 12 V battery by using a high-quality (pure sinewave output for reduced RF interference) 12 VDC - to - 115 VAC inverter.

What kind of power supply? the original 12 V dynamotor, the military issued AC power supply in its place or a homebrew power supply?

I acquired 3 BC-312's in excellent working condition in the last few years, one with the original dynamotor and 2 with the military AC supply (like in the BC-342) and I paid between $75 and $125 for them.

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

1974. FS: Hallicrafters ham band receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-19 00:00:00 UTC
From: besell@earthlink.NET
Message-ID: <NEBBLPDEEPKOEHILPOHAIEDHCDAA.besell@earthlink.net>
Source record: 61350

Hallicrafters SX-140 ham band receiver. Would be a 9 except for some scratches on top of cabinet. Very clean inside. Working. All original knobs in great shape. With calibrator. $70 US + shipping.

Hallicrafters SX-146 ham band receiver, fairly rare, I believe this was the last ham band receiver made by Hallicrafters. Very good-plus condition, working, very good front panel, all original knobs, some scratches on case. Has Heathkit HRA-10-1 100 kc xtal calibrator plugged into the HA-19 calibrator socket, but it works like original equipment. $200 US + shipping.

Also have a ?vintage? Lafayette Comstat-25A CB vacuum tube transceiver & copy of manual, $20 US + shipping.

With thanks, Brian VE7BCU

Jeff:
The original vibrator power supply was the MI8319. Mallory, Radiart, and more recently James built vibrator power supplies which could provide the 300 volts at 90 milliamperes the receiver requires, if you are seeking some kind of authenticity. On the other hand, transistor DC-DC converters were all the rage in the 60s, and circuits appeared in all the ham magazines, and the Handbook. These can be built, filtered and packaged so as to radiate a lot less RFI than the old vibrapacks(TM) did, so the receiver can hear a lot better.

Why wouldn't you want to run one mobile? I ran an NC-125 that way for a couple of years while in college, when I couldn't afford anything smaller.

Always preferred pecan pie to cookies....unless they're macadamia nut cookies!!

Are the 2B's REALLY worth that? I've got a 2B with the Q Multiplier, great little receiver! But $220 (and I don't think his has the QM with it?). Guess I've been out of touch on the pricing! Anyone (else) looking for a Drake 2B? Also have a RatShack DX160 with the external speaker (not politically correct BA, sorry in advance!), any interest?

Hope he gets his asking price! His radio looks GORGEOUS.

If you want to use Ebay as any sort of indicator, they can go up to $200+, all depending on condition. There have been some that have been butchered (e.g.: no elephant trunk, missing toilet covers and jacks, etc) and have had low or no bids. So it depends...

Many of us in the Dallas area donated hundreds of highly collectable
radios to the National Museum of Communications in Irving, Texas. These
included many brands such as Collins, Hallicrafters(several SX-115's
among others), National, hammarlund, etc. Two years ago, without our
knowledge, they filled five large commercial dumsters with these radios,
and hauled them to a dump. Be careful.....once donated you loose
control.

Quite simply.

Do the people with 30 Collins radios *USE* them? Or let them sit on a
shelf
for their increasing value? If the former, they're BA lovers. If the
latter,
simply businessmen. Get it? There's a difference between buying something
for the intention of reselling it later for profit, and buying something,
restoring it,
using it, sharing it with others, and enjoying it.

>For the most priceless and rare in my BA collection, I have made an attempt
>to contact the family of the company or designer and make arrangements to
>send to them, when I could still enjoy the spirit of doing so.

What a brilliant idea!
Rockwell recently bought the Hallicrafters name; they would be a likely candidate, no? But Nationals, Mackays, McKay-Dymek, etc...where do they go?

Actually, although we enjoy our radios, they are held in deep reverence in JL land.
This is a touchy subject for some, but do they have any worthwhile museums housing radio gear?

The Japanese respect for older things stems from their respect for the eldelry. In the audio field, tube equipment by Marantzs and MacIntoshs command top dollars from Japanese collectors. The same is true of Collins equipment.

I'm not suggesting we export our heritage, but damnit, is there a US museum for HF communications? How about the NSA museum? Some of our "surveillance" gear might fit in there.

But if the legacy of HF radios is going to be preserved, and Japan is the only taker, then that's better than the trash heap, isn;t it?

Some truth to what you say. Problem is, the new kids in ham radio are appliance operators who want an Icom or Kenwood to start with, and wouldn't take a chassis, a transformer, a couple of coil forms and build something. I would be willing to donate stuff like that to anyone who expressed an interest, and I'm sure many others would.

The new hams turn up their noses at analog tuned radios (hell you can't give away an S-38, or an HQ-100 these days to a needy recruit...they turn up their noses at it).

2003. FS: GPS antennas

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-19 01:31:49 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39C6C1B6.8AF1D6EB@home.com>
Source record: 61325

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Source record: 61333

Anybody have a source for the 25 K, 4 Watt wire-wound pots that a Valiant uses for a driver level pot? Mine has developed a case of the "crunchies" and I peeked inside and saw the winding getting shoved around by the slider. I think that may have something to do with the intermittent failure-to-go-to-transmit-when-the-switch-is-flipped problem...
Also, what's with these aqua coloured caps inside? 3rd cousins to the "Black Beauties"? "Green Meanies"? They're not orange, that much is certain.....

Thanks in advance,
73,

John WB9OFG

Source record: 61337

Problem is, the new kids in ham radio are appliance
operators who want an Icom or Kenwood to start with, and wouldn't take a chassis, a transformer, a couple of coil forms and build something. I would be willing to donate stuff like that to anyone who expressed an interest, and I'm sure many others would.
>>> It's really not fair to generalize the new hams, they come in all shapes, sizes, interests, and backgrounds. Many of them (like myself some years back) were TOLD not to get a tube rig by other hams/elmers. They're heavy, run hot, unstable, dangerous etc etc... Giving them a bag-o-parts is an idea, but a novice isn't likely to be able to build a tx out of parts that would come anywhere close to an FCC legal signal. Heck, most extras couldn't either. Building an rx is more practical, and some simple ones can be found in QST that will get a new ham started.

The new hams turn up their noses at analog tuned radios (hell you can't give away an S-38, or an HQ-100 these days to a needy recruit...they turn up their noses at it).

>>> I wouldn't think it was a great idea to give a new ham one of those xformerless rigs like the S-38. They really are dangerous without an isolation transformer.
Any of the "non-collectable" BAs might do though. Lots of Hammarlunds, Heathkits... might get someone interested in BAs (and in the long run.. create some folks who might want our collections forty years from now). Try to keep in mind that encouragement brings new people, disparagement drives them away.

Source record: 61338

You're probably right. Getting someone interested in HF with a homebrew 15 watt CW transmitter is kind of unrealistic in this age. QRP CW is not for everyone, at least not as an intro to HF.

I guess I was thinking along the lines of the old analog transceivers like the Heathkits (HW101, or SB series), National NCX3, or Tempo1. Not exactly free, but maybe under $100. Enough to get a new ham's feet wet on HF though.

Course that brings up the new nature of the entry level ham ticket - no longer Novice class - now it's the Technician class. I guess a low-priced 2M HT would be more appreciated by the newcomer these days.

Anyway, the issue was whether or not eBay prices are undermining the ham tradition of helping newcomers get on the air cheaply. Right now you can still find a TS520 or IC740 for less than $350 at hamfests. I'd hate to see this stuff priced out of new hams reach.

Don't get me wrong, I'm not a doom-and-gloomer. I am convinced the old ham spirit is more alive and well today than one might think. More than once I've had fellow hams on the internet respond to my inquiries for small parts to use in BA restoration projects, xtals, knobs, connectors, manuals, etc. by mailing them to me - free of charge.

After a long discussion, one guy even sent me a Ameco AC1 cw transmitter (he probably could have sold it on eBay for a fair price) because he knew I'd restore it, use it, and appreciate the hell out of it.

Motor oil contains contaminants that could destroy your resistor. I
use mineral oil. It has a lower boiling point than the old transformer
oil. So don't key it so long.

I doubt you will be able to settle it down enough to use on PSK31. You
could try placing a sorce of heat in the VFO (inside the top lid) such
as a small light bulb to keep the temperature basically the same all
the time.

That trick worked for an old Viking Valiant I had a few years ago, but
then I wasn't using it on PSK.. HI.

2022. Re: COLLECTIONS to museums??? Write a will?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-20 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <39c92b25_2@news3.calweb.com>
Source record: 61249

I wrote an article for CQ magazine some years back that spoke to the problems facing our families when our keys go silent. I got a few letters from fellow hams who agreed there was a problem with our current system of checking out with a basement full of aluminum, tubes and God only knows what other treasures we may have set aside for that project that never happened. But in that last statement is the crux of the problem. Those of us who are hopeless romantics and collect the crap are most surely convinced that we will live forever and the rat packing away is a hedge against that ultimate destination for all things human...consumption by gravity. Denial is a strong emotion to deal with along with the "I always wanted one of those" syndrome. A pile of money in the bank at age 60 is comforting, but a pile of radio junk in the garage, basement, storage unit, bedroom, livingroom, kitchen, and a full shelf of QSTs and CQs in the latrine is pure Nirvana. It just does not get any better.
But since we cant take it with us, why not enjoy it regardless of motive. I for one have been wrestling with the problem of excess junk for nearly a decade. And while I've sold off a bunch of my junk since the grand kids came along, I still can't stop bringing home replacements to fill in the space made available by junk leaving. And this has not really improved the quality of the herd (collection) it has made life a bit less routine during the off-work hours. I wonder how many of my fellow hams have found a nifty turns counter knob at a swap meet and instantly visualized a complete 2KW amplifier forming around that single part? Few of us take or really have the time to invest in the building of the dream amplifier even if all the parts were on hand.... But what price do we attach to the dream of that amplifier and the planning that goes into that dream...
So much for pulling on the pathos strings of ham radio. The other side of the equation is that the nifty turns counter you purchased back in 1988 for $3.50 will probably bring in 15 dollars in 2000 and fulfill the pipe dream of the next hopeless romantic coming on line with his tattered and torn ARRL 3rd edition SSB handbook in had....In this case it is a win win situation. You had the promise of an amplifier for 12 years and the next person is just conjuring up his dream with the same centerpiece. Adjusted for inflation, I would say that the price of that dream was within reason. Sociologists have written zillions of tomes on this process and I shant try to second guess those folks. Like it or not all transactions among our species are economic by every definition. What is nice about our hobby at this point in the scheme of things is the ability of many hams to realize their dreams of having which at one point in their life was the ultimate possession be it a round emblem KWM-2 or a complete Knight Ocean Hopper setup. And the "profiteering rascals" peddling these items are offering you those unfilled dreams at a cost you can either opt for or against.
In closing let me make but one recommendation. Keep a list of your major toys including the purchase date and what you paid for them. This

will give the executor of your estate a minimum price to start with before the "Grim Dumpster" comes calling for that coveted turns counter.

Steve,

Here is the web address of a nice VOX. It has a very good
description with it so you can adapt it to your specific
needs.

http://www.qsl.net/ve3rgw/sbvox.html

He has a lot of good antenna ideas also on his web page.

Good Luck,
Martin K7MEM

2024. Boatanchor Panel Lettering

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-20 00:00:00 UTC
From: John Morris <moe@email.msn.com>
Message-ID: <#RBb0F1IAHA.436@cpmsnbbsa07>
Source record: 61251

I have several receivers with the engraved panel lettering for each knob. I have one of the white paint sticks that I used for the first time on an RBO-2 E.H. Scott receiver to make the engraving stand out.
Maybe it's because the panel surface is black wrinkle, but the paint stick smudged out side the engraving and I can't seem to get it off easily. Don't you just move the stick over the engraving to deposit some in same.
Instructions said to use mineral oil if it gets outside the engraving...but that didn't do it.
Would appreciate some guidance...from the community...

Thanks

John Morris

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

You might try Barnhill Bolt Co., at http://www.barnhillbolt.com. They have all kinds of unusual fasteners. I found setscrews to replace those on a Heath SB-300/400 I am (slowly) working on, and metrics to replace those that worked their way out of a Comet antenna, as well.

Jack is spot on... my father passed away in late July leaving my aged mother a basement *full* of radio equipment, most of which aptly fit the description of "junk" - I'm a ham myself, and believe me, it's junk. I've started cleaning it out for her as best I'm able, but suffice it to say my evenings and weekends are now booked through late fall :b There are several tons (I'm not exaggerating) of gear and old radio books that have been quietly rotting away for the past 20 years - the man never threw anything away! Due to the recycling regulations in the town, most of it cannot be put out for curbside pickup, necessitating the rental of a 40 cubic yard dumpster - as I discovered, they are not cheap.

I would say to anyone, older or not, who has a big collection of equipment of dubious worth: either get rid of the stuff now by any means, or make arrangements for its disposition in the event of your death so that your family is not saddled with the task of disposal during what should be a time of mourning.

Imagine the tractioin you'd get in snow!

BTW... I have had a number of these wonderful receivers and don't have one now..... However, I have a number of knobs (not VFO) for them that are in great shape.... They are yours for the asking (whoever you are......) I'll even pay shipping

First come....first served.

2047. FS: RME 4300 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-20 01:46:50 UTC
From: Chuck O'Neal <coneal@ultranet.com>
Message-ID: <eGUx5.26237$pu4.2350652@typhoon.ne.mediaone.net>
Source record: 61372
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

In very good condition cosmetically, works well and includes
the manual. This receiver covers the 160 through 10M
ham bands, (excluding WARC) . This is the perfect
receiver to match the Johnson Viking Ranger. Same
big half moon dial, and identical frequency coverage,
(even 11 meters).
$249 Total, which includes double boxing and shipping
CONUS.
regards,
Chuck...K1KW

Some,
> of course, is not rare, but does not deserve destruction.

Nor is donating it to a museum.
Unlessyou have something really rare, the odds are that "if" the museum accepts the equipment there is no gurantee that they won't throw it out either. Course your estate does get a tax break...

If you donate equipment to a museum, it would be a good idea to talk it over with them and find out what they would do with it.
Even if they put it on display, they may still dispose of it later (pitch it out)

Truth is, that many of those collectable radios we see, collect, pay inflated prices for because they are collectable, are not really collectable, except to other hams. To the rest of the world, most of the Collins, Hallicrafters, and EF Johnson stuff that sells for thousands of dollars is just a bunch of "old radios"

Most of the above stuff, is not rare!
It's not even collectable outside the Amateur radio arena because the stuff is so common.

The only thing that makes it collectable it nostalgia.

>
> There are only a half-dozen radio museums, and to me they appear to be
> understaffed and underfunded. They may not be able to collect and appraise
this

>

They may not even want it or have a place for it.

> I've brought this issue up before, but would like to re-open it for
discussion.
> How do we keep our precious "babies" from the waste heap and put them
where
> others can share in the enjoyment and wonder of this shortwave craft.

Much as it burns, I'd leave a set of instructions for some one to put the stuff up for auction and let the heirs have the money, or donate the money to a good charity.

>
> Commonplace items could be put on EBay, but what about the real rarities?
> And, how could my estate benefit from any tax credits for donations?
>

What defines a real rarity? A valuable rarity.
Remember to be valuable it has to be wanted by someone and when it comes to ham gear about the only people who want the stuff are the collectors within the hobby. For a museum to want any of it, the particular piece must have historical significance, or be a true rarity.

Unless, it is something like one of the very early receivers from Deforist, or uses an Audion it's probably not considered really rare by the general public.

Currently there is one of the last generation of Hallicrafters on e-bay.
It's a Hurricane (SR-2000). It comes with the same lineage as the HT-44, SX117, and SR-150 which were relatively plentiful and inexpensive rigs.
They, like the Yaesu, Kenwood, and Icoms are definatly not rare.
.
The SR-2000 runs the full legal limit and maybe capable of a bit extra, all in one transceiver.
The thing "needs work". In other words it's broke, but the price is currently $1,205.02. I have no idea as to why the $.02.
But it is one of those rigs that is not just a collectable, but it's really rare.

> C'mon guys, let's hear some thoughts on this.

I truly believe the saying that "One man's junk is another man's treasure" is even more true when it comes to ham Gear.

To the few of us, the stuff is "treasure", but outside the group, it is just junk.

So, as much as I like my old treasures, when I go, so do they. (To the highest bidder)

Let someone who really wants the stuff pay top dollar to your estate. That's what I'll do.
I'm going to let the kids have the money as I'm going to spend what I have on myself while I'm still here to enjoy it.

> >are the BA lovers. How else can you explain someone with 30 Collins

BA lovers, purchase the BAs to use.
Trophies, by definition are something won, or earned, and set on the shelf
to look at.

As an investment...Well, if they do that, then they've not learned to think
very big.
You'd have to purchase a *lot* of rigs to make real money, or buy that
retirement home. Buisnessmen buy and sell. They turn over the inventory
as quickly as they can. Long term investments have to be something that
will stay well ahead of inflation.

It takes volumn and turnover to make enough money to really get anywhere.
So even with 30 collins stations purchased when they were at their lowest
would hardly set any one of us up for retirement.

Even a mint S-line is not all the much more than when it was new and the
dollar is worth a whale of a lot less. You'd have to seel them for two to
three times their cost back then to make a profit in real dollars.

However it's nice to find the old boat anchor in the basement is worth much
more than you'd thought.

> >receivers.
> >Brian Denley

And not very good ones at that.

> Get it? There's a difference between buying something
> for the intention of reselling it later for profit, and buying something,
> restoring it,
> *using* it, sharing it with others, and enjoying it.
>
But buying, letting them set on the shelf and appreciate, and then selling them years later, just doesn't pay much compared to many other endevours including working for a living. You are really lucky to stay ahead of inflation, unless the object is *really* rare.

Actually, there are several markets involved.

There is of course the regular market...which involves virtually all Hams.
There is the collectable market...Which is a subset of the regular market and is much smaller, but can be more powerful.
Collectable has little to do with rarity, but rarity usually does mean collectable. One of those streets that usually only runs one way.

Those markets use retail outlets, swap and shops, individual sales, and auctions

All of these depend, more or less, on supply and demand.
Normally the bigger the marked "and demand" the higher price an item can command.

Put together a system (e-bay) which puts the most buyers who are likely to pay the most (collectors) in touch with with the desired items is more than "quite likely" to garner the highest prices.

Go to swaps, where you are looking at a customer base who are likely to pay the least (general ham population) and sellers who expect to see people pay auction like prices and you find buyers complaining about high prices and sellers complaining about the market just "ain't what it used to be".

We all have to remember that these are all different markets and that each can command just so much price. There may not be all that many of a particular type of rig on sale, but there are very few who want one and few still willing to pay...Unless a collector (who can afford it) happens buy.

It's always playing the odds, but the chances of garnering a higher price will always go with the sales method/arena that garners the largest, interested, audience.

The chances that the individual who sets a price on an item equal to the highs of an auction are that the individual may have to wait a long time before finding some one who is willing to pay that high price. Then again, the next person walking buy may find the item to be "just what they were looking for". It's a game of odds.

Ever once in a while you see rigs that don't even come close to the reserve price at auction.

Remember that with collectors and high prices in the Ham Marketplace, we are a small and specialized audience at best. That means the old equipment such as Hallicrafters, Collins, and EF Johnson that command high prices within

the ham arena would more than likely be considered, just old radios outside
that arena.
Also the market is cyclic, just like the stock market. Times get even a
little tough and those high prices can tumble back to those of
preprosperity.

Look at the Wireless Set 19 web site at http://www.qsl.net/ve3bdb and
you'll find the manual there, as well as other technical resources
regarding the WS 19. There is also a 19 Set bulletin board. We are a
group of collectors and users of the Wireless Set 19 and you're welcome
to join.
There is a company in England that still sells spare parts, including
the meters for the 19 Set, I'll have to dig out the URL and post it.

The 19 set web site also has a swap board, the "Quartermaster's Stores"
where you can post your request for parts - I'm sure someone will have
what you need.

By the way, in spite of the fact that your 19 set is labeled "Signal
Corps", it was never used by the US Army Signal Corps - only by the
British Commonwealth forces. These sets were made under contract in WW2
by the British government in the US because they couldn't manufacture
enough in England during the war. They were manufactured in Canada
also. The British/Canadian made sets have different labels.
Many of the 19 sets were made with dual English/Russian markings,
because they were sent to the Soviet Army in large numbers during the
war.

Good luck,

73, Meir WF2U

Hi all,
Have the following enclosed 19 inch rack cabinets for sale:

Unit #1 - Not sure but appears to be manufacured By Premier Metal
Products
Can be used as single or together. - Slopping front
Color - Brown and tan
Dimensions - Slopping panel area - 21 inches
Total height - 54 inches
Overal width of both units - 42-1/2 inches
Single unit width - 21-3/4 inches
These units are used and in very good condition. Complete with rear
doors, side removeable panels and lower panels. $100.00 for the pair
plus shipping.

Unit #2 - Have 2 units - Manufactured by IBM - These are new/never used
- cratted
Color - Beige
Dimensions: Panel space - 35 inches
Total height - 39-1/4 inches
Total depth - 30 inches
Total width - 21-1/4 inches
Has spring load casters mounted on bottom, 10 inch fan mounted on the
rear door, Waber 120Vac outlet strip mounted inside and all new hardware
bagged.
$100.00 each plus shipping.

Purchased originally for amplifier projects.

> Are SX-115s really worth 1500+

The short answer is "yes and no".
The prices vary widely, even on e-bay.
If you have a really nice one and sell it on e-bay the price will probably be right up there due to all the collectors with money, but they do appear to be coming back down a bit, albeit slowly.

Every once in a while a rig will come along that some one wants badly enough that they will pay any price so the rig sells for an astronomical price. It only takes a couple of these and it can very easily turn into a feeding frenzy if the rigs are nice.

The same is true for bid shilling.
The price can be run way up on a couple of rigs in a row and it won't be long and people, who have the money, will start paying those prices.
Some one said that it would be unlikely someone would have a friend buy back a rig at an inflated value as they'd have to pay the commission and lose money, but if they sold one out of four they could still make a sizeable profit and in so doing, would raise the general market price.

If you take one to the local swap, or make the rounds of swaps, there will be few people you are likely to find that will pay any where near the e-bay prices.

As I've mentioned in other posts it's playing the odds. Try to get e-bay prices at the swaps and you may have the rig for a very long time, or it may be exactly what the first guy that comes along, wants and is willing to pay.

The odds are you would have the rig for a very long time.

>or are they just a trophy rig like the SX-88.

Yes, they are a "trophy rig" and not terribly rare, but there are nowhere the numbers of them out there as there are Collins receivers.

> Their not all that rare are they? If they are I should have kept mine.
Their
> not a better performer than comparable Collins, Drake etc... rigs Ive
used.

They are probably on par with the Collins and Drake (at least I couldn't tell any difference), but they don't have that "modern" look.

Although I try to avoid e-bay, I do find things on there that I want and that is far easier than going to a swap every few weeks in hopes of finding the same item.
When you figure the cost of driving over 100 miles to a swap, for a bargain, some of those inflated prices don't look so bad.

Figure the 37 cents a mile and it's $37 each way plus your whole day is gone, so you'd have to add almost $80 dollars to the price(s)

Conversely, if you are selling and the price is high, every swap would be taking $80 dollars out of the profit.

That is a very broad generalization as few take only one item to sell and the distances vary widely as well.

Roger (K8RI)

Source record: 61211

I have 2 of the Heath "cantenna" units, one filled with Dow/Corning silicone heat transfer fluid, and one with el-cheapo non-detergent 30W motor oil. They both work fine (silicone takes continuous duty use a little better). I was a bit worried about the motor oil degrading the resistor element, but the resistance has remained stable for the 10+ years since I built it (I have checked it a few times over the years--always right around 51 ohms).

The motor oil does seem to tarnish the silver plated connector straps inside the can, though, but only on the surfaces. Perhaps there is a bit of sulfur in the oil? Solder joints look just fine.

The hardest part is FINDING plain old non-detergent oil these days...I looked in several auto parts stores before I found some! :)

Anyone with experience using synthetic oils (Mobil 1, etc.) in these things?

:-) :-)

Yes, I have a RA-17 and the rectifier tube (GZ34) does have a hat!

I think it is because of the price of those tubes... an ordinary
rectifier won't have hat ;-)... only high priced tubes (elite!)
wear them... talk about tube discrimination!

JOSE

73 EB5AGV / EC5AAU - JOSE V. GAVILA
La Canyada - Valencia (SPAIN)

Those hat-like things are tube hold-downs. Eddystone used them as well, and I
have an RA-17 which has a "fishnet" style - a bit simpler. They appear to be
made of string and must have been coated, because they are rigid. My XYL says
they look like crochet.

Build a "damp chaser" ...put a 20 ohm 12 Watt resistor inside the VFO
compartment, or under the VFO chassis. Use the 12 volt line and it should
help keep it stable.

There are lots of things that can make a VFO more stable, but it's difficult
to get the older rigs to match todays standards.

Ahhh...bout 1990.

My
> father (SK, W4QAZ) sold Beech and had an early Debonair down at the
Monroe, NC
> airport years ago. It was one of the very first birds to come off the
line

Mine is S3 CD-2 and "they" tell me it was the first off the line with CD-1
being hand built. (I got his wings- both are CD-1) It was built in Sept of
59 and shows 30 hours of preproduction flight testing.

> {much denigrated by the "real" pilots which wanted their Bonanzas with "V"

back
> into flying...hmmm, "Hon, can I buy an airplane? I'll keep all my ham
gear in
> it!!??)

It won't haul that much load, but it sure makes a good 2-meter platform.
I clip the HT to the door strap and wear a earpiece under the headset and a lapel mike. I usually operate either 52, or 58 simplex.

> "...if one tolerates bad manners, they grow worse. I must find the oaf who did

Liked the book.
As I recall it was the first of a long series.

As mark said, have the tubes checked.

Don't forget that they used an antenna coupling capacitor and its setting is important.

And, if all else fails there is the old "realignment" task.

Oh, Try turning the AGC on and off to see if that makes any difference in the signal.

How about the S-meter? Is it active and reading a good signal, or just sorta laying on the bottom of the scale? If it's not indicating much, then the problem is at, or ahead of the stage that generates the ALC and is most likely a tube.

Course these are old radios and weak reception, can be anything from leaky bypass caps, coupling caps, tired tubes, poor solder joints, to misalignment.

Good luck

2092. FS/FT Collins KWM2

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-21 00:00:00 UTC
From: dannyshaver@my-deja.com
Message-ID: <8qbuo8dvq1@nnrp1.deja.com>
Source record: 61274

For Sale or Trade: Collins KWM2 (winged) in excellent condition, all original. I have owned several nice KWM2's and 2-A's, but this is the best KWM2 I have seen and it has a documented history. I have traced the radio from it's original owner who had it in Beirut, Lebanon and worked in our embassy all the way to myself. I have the green final inspection tag that was on the radio when new, along with the original manual. The radio went back to Collins in 1976 for mods and was recently gone through by a noted Collins Technician. $1250.00 plus shipping from North Texas .
Thanks- Dan N5NBK

I think the best choice is mineral oil as it is non-toxic and can be safely ingested. Important if you have children or pets around. Can dummies have a vent and I don't think you want vapors/liquids seeping out that are harmful.

Second choice is non-pcb transformer oil. I think MFJ has it in appropriate quantities through its catalog.

2101. FS: ** Amperex PQ 7534 tubes **

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-21 00:00:00 UTC
From: ovrreactor@aol.com-nospam
Message-ID: <20000921000332.23540.00000011@ng-df1.aol.com>
Source record: 61283

I am selling four (4) Amperex PQ 7534 tubes. These have just been tested for emissions and leakage on a B&K 667 tube tester, and all test strong. They are used tubes, but show no physical sign of hard use. I donï¿½t have any equipment that uses these, so I canï¿½t verify that they will work in any specific application. I will warrant these tubes against DOA, and that they will test good on a similar tube tester, but otherwise the buyer accepts these tubes ï¿½as-isï¿½.

All 4 for $75, (shipping included for US).

If interested, please respond by email.

Regards,
Tom Mitchell
email - OvrReactor@aol.com

2102. FS: ** GE 8068 tubes **

Source record: 61284

I am selling eight (8) GE 8068 tubes. These have just been tested for emissions and leakage on a B&K 667 tube tester, and all test strong. They are used tubes, and with the exception of one tube that is missing a keyway, all are in good physical shape. I doni¿½t have any equipment that uses these, so I cani¿½t verify that they will work in any specific application. I will warrant these tubes against DOA, and that they will test good on a similar tube tester, but otherwise the buyer accepts these tubes ï¿½as-isï¿½.

All 8 for $200, (shipping included for US).

If interested, please respond by email.

well, since you posted this on the boatanchor group, I suggest you have an
older radio. Depending on HOW OLD, this would be the list:

500 kHz morse code
2182 kHz AM mode
2182 kHz upper sideband
Channel 16 VHF(narrowband FM)

Have a third backup radio Kenwood 690S in excellent condition covers HF and 6 meters continuous to 60mhz. Looking to trade for a Collins KWM2A,KWM2 in very good shape.

2117. ELECTRONAV---MACKAY CONNECTION????

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-22 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000922162931.12111.00000289@ng-cs1.aol.com>
Source record: 61148

I am now the perplexed (but pleased) owner of three Electronav EN R-2 receivers. (Only one works, though, and it shows promise)

Thanks to Fred Osterman, I also now have a spec sheet, which shows an address in Elizabeth NJ for this company (not too far from Mackay!!). Indeed, another receiver in EN's productline is a re-labeled Mackay 3030.

Did EN actually manufacture any goods in their own factory? Or was everything OEM'ed?

They targeted the Marine business, and I suspect they must have had strong ties to Mackay.

Can anyone provide some history?

Thanks

Message-ID: <8qgpc9$4si$1@nnrp1.deja.com>
Source record: 61151

2000 Fall Classic (and homebrew) Radio Exchange

1900z Sept 24 to 0400z Sep 25.

Exchange name, RST QTH (state, province or country), and receiver and transmitter type (if homebrew,
send final amp tube or transistor type).

The same station may be worked with different equipment combinations on each bandand on each mode.

On CW call "CQ CX;" on phone call "CQ Classic Exchange."

Non-participants may be worked for credit.

Suggested frequencies:

CW---3.545, 7.045, 14.045, 21,135, 28.180.

Novice/Tech---3.695, 7.120, 21.135, 28.180.

Phone---3.880, 7.290, 14.280, 21.380, 28.320.

Scoring:

Multiply total QSO's (all bands) by total number of different receivers plus transmitters (transceivers count
as both), plus states/provinces/countries worked on each band and mode.

Multiply that total by your CX multiplier-- the total age (in years) of all receivers and transmitters used,
three QSO's minimum per unit.

For transceiver, multiply age by two. If equipment is homebrew, count it as a minimum of 25 years old
unless actual construction date or date of its construction article (in the case of a "reproduction") is older.

Send logs, comments, anecdotes, pictures to: Allan Stephens, 106 Bobolink Dr, Richmond KY 40475.
e-mail: modsteph@acs.eku.edu

See you there??

Dan/W4NTI

Jerry,

Dig around at the local resale shop, church charity store, and
flea markets. I've used transformers from old PA and audio amps
in some of my glowbug transmitters. Old tube-type test equipment
will also yield some useful power transformers. Ya gotta scrounge
for yer parts, man! Just like in the ol' days...

Source record: 61218

Hi Fellas;
I have for SALE:
Kenwood TS-830S(gold label) with warc bands, excellent condition, 100 watts out, No Options, copy of the manual.
There is a switch on the back that places the radio on 26 to 28 mhz without disturbing the regular 10 meter band. It came like this and of course you can only listen there because transmitting there is illegal.
The only other thing is that it takesa about 15 or so seconds for the display to light and receiver to come to life, maybe because it has'nt been used in a few years?
Price is $400 ppd conus!
Thanks es 73....Rich WA2RQY (1961)

Some of the old radar sets I worked on away back in the 60's had some tubes
that had those so called hats as well. It was on the high vacuum tubes and
we were told it was there to try and semi contain the fragments if the tubes
exploded. (make that, if the tube imploded.)

Hi Guys;
I would like to buy a Racal or eddystone SW recvr for my own use.
Must be Solid state, 100khz to 30 mhz, both SSB's, AM & CW, Digital display.
Watch ya got?
Radios with Telephones numbers for prices, need not respond :-)
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

I have three nice transceivers in excellent working order. The Yaesu is an 8 and the ICOM is a 9 cosmetically. The Kenwood is a 7. All three have manuals.

ICOM 751A with built in AC supply SP-3 speaker, SM-8 mike & HM 36 mike, mobile mount. Take all for $600.00 + shipping.

Yaesu 101ZD 160-10 including the WARC bands. 140 watts output. Asking $275.00 + shipping.

Kenwood 130S comes with mobile mount, mike, DC cord. Asking $325.00 + shipping.

2150. FS: Still have a few of these real nice GPS antennas for sale,$55.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-22 04:44:26 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39CAE359.C0C7FF07@home.com>
Source record: 61228

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Message-ID: <20000923130953.08319.00000490@ng-ft1.aol.com>
Source record: 61047

I am searching for a panel meter for an old RCA broadcast transmitter model # BTA-1MX. A 500 MX also used the same meters. I need the case (mine is cracked) so it is not important that the movement work. The cases are about 4", and have a small RCA logo engraved in them. It is a 50's era transmitter and I have been told that most old RCA meters use identical cases. I have taken over a year to convert this unit to 75 meters, restore it cosemtically and electrically and this is the only flaw. The unit looks brand new otherwise and the cracked meter case just really bugs me. If anyone has one laying around for sale please let me know.
Thanks,
Jim W3ATV

2182 is only if your boat is old enought to have its original radio,
otherwise, VHF is it.
I would advise a Power Squadron or Coast Guard Aux boating course. this
would help in all aspects of boat operation and ownership(except paying the
bills of course)

Thanks I downloaded that version, which is good as far as it goes. I understand that the military manual is longer -- over 60 pages versus 30-something -- and includes additional information such as chart of resistance values for all the tube sockets. I am trying to diagnose a puzzling problem with the S-meter (won't zero), after recapping the set, replacing many resistors, and checking meter-related components such as the adjust pot.

Just about every TV "used" to have one so there's probably lots of them at
the local land fill..

I built a pair of 6L6s with a 6AG7 Oscillator from the "Handbook".
As I recall, it was capable of 90 Watts.

Tore
As far as I know the Kokusai filters are not available any more.
Collins have a similar arrangement in their KWM2.
They are still making these filters to order.
I think the part no is 526-9337-000 and the cost is $300-00
At that price you would want to be sure it would work!!

>At that price you would want to be sure it would work!!
>Don
>Bristol UK

Is the Kokusai mech filter physically broken or just drifted off freq ?? If it broken there nothing much to be done but if its not broken it may be off freq. The mechanical elements inside are wrapped in foam which deteriorates after many years leaving a deposit on the metal discs. If this is the case just re trim the carrier crystals to the new position on the passband slope.

Go to your auto parts store and buy a spray bottle of Westley's White Wall Cleaner. This stuff dissolves tar like nothing else. Alcohol and soapy water are a waste of time. With this you don't even have to rub - it just instantly dissolves. I've never had it attack paint or anything but your mileage may vary. As with anything try it on the bottom or somewhere inconspicuous first.

FWIW, back in the '70's I ran 500 ma peak plate current using a National NCX-200. On 75, anyway. The AC supply gave up to 1100 volts; the SBE DC supply only about 900.

Every month I'd take my "lifetime warrantee" sweep tubes back to Radio Shack. "Must be something wrong with them; see these sucked in places in the glass?"

(heh!)

Hi,
Phil asked:

>Can someone suggest a source for the military version of the Hallicrafters
>SX-28 manual? I checked my usual sources and they seem to have only the
>civilian version. I downloaded one from the web that purported to be the
>military version, but that was identical to the civilian version, too.

There probably wasn't one. I have manuals for the SX-28 dated Nov.
1 1943 and for the SX-28A dated April 10 1944, from the MIT "Research
Laboratory of Electronics" which came with many other wartime military
manuals. These have no military markings. The SX-28 was after all a
civilian set.

I have originals of the following mil manuals. I'd like to trade copies of my manuals for copies of manuals I need. Please note that I'm not in the manual business and have no interest is selling any of these manuals. Thanks.

I have: AN/GRC-9, ARC-30/TYPE 12 (ARC), SCR-499, TS-352, AS-1729/VRC, ARC R-34, ARN-30A, ARN-30D, ARC 5 (alignment handbook), R-392, GRC-19, BC-669, VRC-12, PRC-25, R-274 (SX-73), R-388, BC-221, BC-611, PRC-41, BC-375, PRC-8,9,10, GRR-5, SCR-509, TS-505, S-119 SYSTEM, FRR-21,22,23 (SRR-11,12,13), PRC-66B, URR-35, URR-27. I also have a bunch of 1940/50's original, vintage Hallicrafters originals that I can also copy.

I need: Navy RBS-2 (Strom/Carl), RCA (Canada) AR-2 or 6 (RCAF aircraft HF rec.), BC-348N (I have a crummy copy, need a very good copy!), GPT-750 (have books, need schematics), Heathkit AR-2, HP 410C schematic for detector probe, HP 8640B (Military version "323"), and a McMurdo Silver model 906 signal Generator.

Thanks for any help. de Jeep/K3HVG

I just picked up a WV98A and have no experience with this unit.
Does anyone have the calibration instructions for it? Also, there is a
"C" cell battery soldered in a holder inside. What is the correct
battery to use for it? I also noticed one of the resistors is broken.
It looks like it may have been a very low tolerance one. What type and
tolerance should a replacement be?
Thanks for the help in getting this one back up to speed. I'd like
to use it here as my main meter.
Terry (KA5IHV)

2201. source for military Hallicrafters SX-28 manual?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-23 02:21:12 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <ssUy5.350$Ok4.17704@sea-read.news.verio.net>
Source record: 61167

Can someone suggest a source for the military version of the Hallicrafters SX-28 manual? I checked my usual sources and they seem to have only the civilian version. I downloaded one from the web that purported to be the military version, but that was identical to the civilian version, too.

Thanks!

From: Bob <xyz_p15218@flash.net>
Message-ID: <l8nz5.7319$864.411703@news.flash.net>
Source record: 61089

On the 30 meter band, my TS-940 draws about 20% more final collector current for any given power output relative to any other band. I was wondering if anyone else has noticed this on their TS-940. The radio plays fine and the output is clean....checked with a spectrum analyzer....just curious. I know it's not quite a real BA but it is heavy and getting old!

When I worked in a tv shop, we used to mix a spray pump bottle with
1/2 water and 1/2 ammonia. It would make a yellow plastic cabinet white, and
bring up the brightness on the screen. Just like magic.

I've been cleaning up an AR88 I recently found and fired it up last weekend (slowly over 24 hours with a Variac). When I reached about 90v. it began to play and I listened to it all day Sunday. I shut it down for the night. I turned it on again Monday and I get no signals. I have audio but no sigs.
I tested the tubes and they all appear fine. I replaced all the bathtub caps (some were leaking) with new Orange Drops but nothing has changed. Anyone have any ideas what to look for? I readily admit I'm a rookie but would love to learn how to troubleshoot. I only have a multimeter, a frequency meter and a signal generator to use as test equipment. Thanks.
Terry

2231. Need Resistor

I'm in need of an 8.49meg, 1W., +-1% carbon film resistor to help in restoring my WV98A Senior Voltohmyst. I didn't find any in Mouser or SSNebraska catalogs. Does anyone have one of know who carries such?
Terry

2232. FS:BIG TRANSFORMER- POLE PIG;picture!

Ok!!! This is getting rediculous! A 115k digest ?
I've asked this several times and received no answer,
so here it is for the LAST time. Is there a way to
toggle OFF the digest mode and receive posts on an
individual basis, so they can be sorted and filtered
into the proper folders ???

I've eMailed the list owner, the Server Admin,
requested/received the 'help' from the server
(which made no mention of digest-vs-individual),
the domain Postmaster, and posted here. No reply!

If not, I'll just have to drop the list... :(
And I really don't want to do that. But digests
are just not usable in any manner here.

Bruce (kb6lwn)

I'm surprised someone would want to go to such great lengths to 'demil' a lovely old smokers radio. The original owner obviously went to a great amount of time and expense to coat his unit with that symbol of the 60's and 70'd, a fine patina of nicotine. Removing it would be akin to re-painting a Collins rig with the wrong shade of paint!

Howdy Earl....I've restored a few pieces that were subject to the same thing.....I'd suggest highly nothing more than dish soap, luke warm water and a rag. Inside on the chassis (steel or aluminum) I've tried all manner of stuff and found that a cleaning product called HERTEL (think I have it correct) worked super - on steel chassis though you'll need a little effort. My own suggestion also would steer you clear of alcohol or similar stuff unless, as suggested, you try an out of the way spot first (and give it time to dry!). "Below decks" on bandswitches, pots etc, get some good quality (like GC electronics) switch cleaner and even
then you might find a small (real small) paintbrush style wire brush (about 1/4" wide) handy to clean the exposed contacts (good for corners of the chassis also). Back outside, on those painted surfaces, plastic bezels and knobs though - stick with the soap 'n water (just damp a rag where you'll wrap it around your finger). Best of luck!

I had great success with electrostatic smoke eater cleaner, it can be found
at Sears or just about anywhere.
I put it in a Windex spray bottle and get 500 Q tips and assorted artist
brushes.
"Its nasty an labor intensive" to really get it clean and to the point that
it no longer smell like an filthy ashtray.

Id start by removing the faceplate, knobs, bezel and case shells and soaking
them soaking them.
"If you have the digital model the display jewel is likely fogged"

Try not to vomit when you dump, see and smell the solution afterward
...........Dont need to ask what happened to the previous owner.

Thanks, Jack, I appreciate your offer. Would you believe someone steered me to the BAMA site and I was able to download the WV98A manual from there. I just finished printing it and was reading it a few minutes ago.
Jack, there is a reference to a 1.5v RCA VS036 battery in the manual. Any idea what an equivalent battery would be? There is also a part C1 "Special Tubular" .1uf +-20% 1,000 v. Any idea what that might be?
Thanks, again, Jack.

Once in a while you may catch a reasonable deal on e-bay, but there was an HT-37 rust bucket that recently went for well over $150.

I'd like one, but I don't want to pay near what the broken one is going for.

They are not difficult to service so maybe it's the appearance that is driving the price up so high, but then again, it could have been hit by lightening <G>. You never know.

I can understand the "as-is" because they are old radios and even at their best do not come near todays technology. I sure would like to have one set up in the shop along with the HT-32 stations though.

Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.packet,alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homeb

I have two handheld radios for sale. Both are Alinco DJ-195 handhelds and transmit on amateur radio two-meter frequencies, which is 144 to 148 MHz. They transmit at 5 watts, and have worked on simplex at a little over five miles. Using a repeater you gain substantially more range. Both come with speaker microphones as well as surveillance microphones. They come with two wall chargers, one car charger and a suction cup antenna mount for use inside your car. Keep in mind you need an amateur radio license to transmit on two-meter frequencies. I'll sell the whole package for $300 plus shipping.

You can view the radio and specs at:

http://www.alinco.com/Products/DJ-195

Also have a Radio Shack scanner for sale. Works with trunked systems, and scans from 29 MHz to 900Mhz. Cellular frequencies are blocked. Will sell it, plus two rechargable battery packs, for $100 plus shipping.

If you're interested, please e-mail me at wellsa@conceptsnet.com or call (206) 222-7521.

Thanks.

I have some old QSTs that I want to keep out of the recycling bin. Some of these QSTs have the covers missing; some have torn pages. They're yours free, as a lot, for shipping from 60516. I imagine they can ship for book rate.

Here they are:

July 1938 - cover missing
Sept 1939 - good condition
Nov 1938 - cover missing
Sept 1938 - cover missing
Sept 1962 - very good condition
Apr 1937 - cover good condition, two torn pages
Feb 1962 - very good condition
Oct 1953 - good condition

For sale at reduced prices:

Drake 2NT transmitter with manual. Untested $135.00

Globe Phone Patch in great condition. Looks great with any Globe
station. Comes with all the cables.
PICTURES AVAILABLE
Will sell for only $22.00

QTY 7 new 6JS6 Tubes by General Electric. New in boxes.
Will sell for $16.00 each or $96.00 for all 7.

U.S. Army Field Telephone Exchange Model SB-22/PT
with latching cover, headset etc. Very good $90.00

MFJ VHF Wattmeter / SWR meter Model MFJ-812B in
exc. condition, with manual. Will sell for $25.00

AMECO Model K-4 Telegraph Key. New in original unopened package.
This is a brass straight key with shorting bar. Will sell for $25.00

CDE AUTOROTOR control unit. Model AR-30 / AR-40
This is a 5-wire controller that will work with several rotators.
Excellent condition. Will sell for $18.00

ME-57 A/U Modulation Meter for 20-1000 Mhz.
Good condition. No manual, but easy to operate.
Will sell for $135.00

TS-418 C/U Signal Generator. Good condition.
Manual included. Will sell for $135.00

TUBE TESTER:
Radio Shack TW-105 compact unit, with book.
Excellent shape. Working well. $25.00

TUBE TESTER:
Lafayette TE-55. Another small unit. Nice condition.
No manual. Will sell for $15.00

HAND-CRANKED MAGNETO GENERATOR! Produces
120V AC. These will provide about 20-30 Watts depending on
your cranking speed! The size is about 3" diameter and
3" deep with a retracting handle. Fluke freq meter shows around 20 Hz
on one pair of terminals and around 60 Hz on another.
You can mount these behind a sturdy front panel with a single
hole and the large nut provided.

Will sell for $25.00

Shipping is additional on all items.

Also available: More tubes, transformers, microphones etc.
Inquire.

For starters, rock the selectivity and bandswitch back and forth a couple of times. These old switches sometimes don't make good contact. If that doesn't bring it to life, check for plate and screen voltage on all the tubes. You may have missed a screen or plate bypass capacitor.

Source record: 61141

Hello,

Regarding the AR88. I had one which went dead on receive. A by-pass capacitor was to blame, which was showing a resistance of 800 ohms. It took ages to find. Use your multimeter on the kilohms scale and with the set off, measure between HT + (B+) and the chassis. This should show up any leaks. The leak, in my case, was sufficient to kill the voltage stabiliser. Only when the leaky capacitor was cut out of the circuit, did the stabiliser light up again, and the receiver come back on. The leaky by-pass capacitor in my AR88 was in the wiring leading to the oscillator valve, and was situated outside the screened compartment, using a spare pin connector on an adjacent valve base. I had spent hours looking for a dodgy component INSIDE the screened compartment.

Best of luck, from John GM0KTO

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Source record: 61114

The residue isn't simply nicotine; it's a complex varnish of many partially oxidized hydrocarbons. Strangely enough, it responds to cleaning attempts similarly to that other infamous boatanchor contaminant (mouse piss).

The worst repair I ever encountered was a Mil pulse generator. The mice had been in there for unknown years, making the place cozy with bits of chewed drop-ceiling tile fibers. It was literally a mouse condo! Then one day a mouse violated the condo C&C's by chewing into a high-voltage trigger circuit. All but one mouse fled to safety; the trigger chewer was partially returned to a simpler chemical composition.

Well, we needed the gear badly, and any salvage attempt was better than nothing. After vacuuming out the fluffy and crumbly and gooey crud, we attacked the chassis with a mist of methyl alcohol (not rubbing alcohol). This continued until the drainage was no longer chocolate brown. We then switched to hand scrubbing with rags soaked in kitchen detergent (something like 409 IIRC). The mechanical effort of scrubbing and wiping likely did more than the cleaner, but the rags were finally looking less brown at last.

We were concerned that the cleaner had left a water residue, so we next tried spraying several cans of WD-40 into the chassis. We let the chassis sit overnight, thoroughly glistening from all that WD-40. Next morning, we went back to misting the chassis with methyl alcohol until the WD-40 was completely gone. Things were looking pretty good inside, except for some chemical discolorations that were permanent. The chassis was set in the sun (we were in a hot, dry place) all day to thoroughly dry. Every few hours, we went out to blast the chassis with an air gun and rotate the chassis to a different angle. That night, we repaired the trigger circuit and put a little contact cleaner spray onto the switch contacts & put some spray into the potentiometers. We also disconnected all the internal coax and board connectors, and pulled the tubes out of the sockets, and cleaned them with alcohol soaked cotton swabs.

The next day, we powered it up (from a safe distance <grin>). It worked perfectly! (But maybe that's more a testament to the original Mil quality rather than my cleaning techniques!) If I would have had any methyl ethyl ketone (MEK) or perchlorethane (PERK) available, I would have tried that first. Maybe that would have worked better than the WD-40. (I had one suggestion to use diesel fuel instead of the WD-40, but I didn't try that.) But what I used is readily available, and it did the job.

2284. National NC100ASD

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-25 01:40:30 UTC
From: Ken Caruso <75260.3652@CompuServe.COM>
Message-ID: <8qmaee$q8r$1@sshuraaa-i-1.production.compuserve.com>
Source record: 61115

I've been sitting on an old National NC100ASD with matching
speaker for a number of years now. This is as best can be
described a basket case.

Someone (not me) tried to power it up at some point and burned
out the transformer and line cord. They went through the effort
of removing the original transformer and procuring a
"replacement" but never put it in.

The case was splattered with paint at some point, so it's a
mess. The dial face looks ok but the window is all yellowed
and warped. The bottom cover is missing. Along with being the
occassional convenient mouse house this thing is pretty messy.

I'm thinking of putting it on Ebay. All opinions on what might
be a fair value would be appreciated.

73,

Ken

2285. FS:Sprague TO-4 Capacitor Resistor Analyzer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-25 01:41:03 UTC
From: jvercellino@sprynet.COM
Message-ID: <200009250140.VAA19370@granger.mail.mindspring.net>
Source record: 61116

I have for sale a Sprague Tel-Ohmike model TO-4 Capacitor-Resistor Analyzer. The instrument is in good physical condition. The meter is intact; no cracks on the face plate. The "magic eye" glows nicely. The analyzer appears to be working, however, I am getting erratic results when I try to measure the value of capacitors. Also, the line cord needs to be replaced. Therefore, I am offering this analyzer for sale AS IS for $10.00 plus shipping. I just don't have the time nor the inclination to try and figure out what's up with this gear.

If you're interested, please contact me directly at jvercellino@sprynet.com

73! John, WB9OVV

Ed and all,
A different twist of your mouse story....
I had a stereo receiver in my unattached garage.
One day the pilot lights went out.
A couple of days afterwards, the FM band was dead.
Then the AM band was dead.
A few days later the whole unit was dead.
I disconnected the receiver, and brought it down to the basement.
Removed the cover. What I saw, and spilled over, was tons of spent bird seed shells.
(I had bags of fresh bird seed in the garage).
And worse yet, it was damp and incrusted with chipmunk urine.
Al

Uh, you probalby mean R46A, not S46A, right? According to the Hallicrafters collector guide, it was used with the SX-62A, SX-100, SX-101, SX-101A, and others

>2) what is the value of the speaker today?

Valued at $30-$50 in the book (your mileage may vary, of course).

I used the C-EC50-50-500 from Antique Electronic Supply S-H122 clamp. The 47 at 150 VDC is also available from them. Parallel the capacitor for 100 mfd @ 500 volts, works just fine. The clamps fit the predrilled holes with no problem.

The illiteracy continues, as the group charter proclaims:

scanner-antenna
This group is on the subject of scanner antennas and reception problems and
talk on hare to fix it

And thus far, 97 members have joined but none have noticed the ignorance.

BTW, egroups has a "vintagescanners" group:

vintagescanners
This mailing list is for those radio hobbyists who enjoy collecting,
restoring or refurbishing, using and operating old or vintage scanners
(scanning radios), crystal controlled radio receivers, and public safety
band monitors. It is hoped list participants will exchange information about
the scanners they are collecting and using, tips for restoration, sources
for frequency crystals

At least that group appears to use conventional English syntax and grammar.

> I'm in need of an 8.49meg, 1W., +-1% carbon film resistor to help in

That's an oddball value which may be hard to find. You can combine two or more resistors to make one of the desired value. For instance, if you need a 2.1 meg 1W resistor, you can use a 1.1 meg 1W and a 1 meg 1W in series. Tying resistors in parallel gives you one of smaller value. Observe the wattage when combining resistors and always test your creation with an ohmmeter to make sure that the predicated value is really there.

>

There was an article in RadCom about 2 years ago about rescueing
KW2000's that
had the same fault, basically replaced the mech filter with a ceramic
resonator.
All done very neatly inside the old mech filter case. I think they die
because
the rubber packing turns to goop. I'll try to find the reference to the
article.
Try uk.radio.amateur maybe.

If you open the thing up you may be able to remove the goop and rebuild
it.
Very fiddly but it has been done!

THe original part is unobtainable and has been for many years. The
manufacturer
was Kokusai and the Collons mech filters won't sub. The best way to get
an original
is to buy another KW2000. They come up quite often for less than 100
pounds.

On a value such as that, I'm assuming its a carbon resistor.
With a good DMM and a small file, you can file away a tiny
bit of a 10 M resistor and reach that exact value.

> Bill Meacham
> Vieques, PR

I have a vague idea of the receiver, but I can't place it exactly.

However, at that time period, solid state receivers were still a fairly new thing, and a lot of them weren't all that perfect. I assume this is worse the lower the original price.

A lot of the early receivers seemed to be transistorized more for the sake of being transistorized. Then FETs became cheap enough, and they were seen as the solution to overload. People believed in the analog to tubes, and thus figured FETs would make solid-state receivers the equivalent of the old tube receivers. A few years after that, the concept of transistors being run at higher current levels, so they could better handle strong signals. MOSFETs fit in somewhere after FETs. Then more work was put into the mixer, with a concern not just with what it was made with, but a move to a balanced mixer.

The mixer in the HA-600, or any similar receiver of the time, is likely to overload before the RF stage. That's the nature of mixers; they are prone to overload by nature of their function. Combine that with what is probably a very simple mixer, most likely a bipolar transistor or at best a single FET, and it's no wonder you are having overload problems. Until you ensure the mixer isn't the problem, anything done to the RF amplifier will not affect overload resistance (and if you somehow improve the gain of the RF stage more than originally designed, this will only compound the overload problem of a mixer).

The commonly suggested solution in cases of overload from local AM broadcast signals, is to put a high pass filter ahead of the receiver. Of course, this is when you want shortwave reception, and it will wipe out AM broadcast reception. But if it attenuates the local broadcast signals enough, then the mixer (and RF stage) won't see a strong enough signal to cause it to overload. (Of course, you could get the same effect by

putting an attenuator between the antenna, and the receiver, but that will knock down every signal, and that won't help you to receive the signals you do want to hear.) A side issue here is how well shielded the receiver is, and I get the mpression early and low end transistor receivers weren't all that well shielded. If enough of the broadcast station's signal gets to the receiver without the antenna, putting a high-pass filter ahead of the receiver won't help a lot, since the signal will bypass the filter.

I don't know about nowadays, but the ARRL Handbook used to always have a circuit for a high-pass filter of this sort, in the Receiver chapter.

You might want to make sure the receiver is back to it's original state, before you try to improve it. It's possible that the changed transistor has made things worse, and even caused the problem of the gain appearing and disappearing. Find out what the original transistor was, get it or a close equivalent if the one in there now isn't a match and put it in. Make sure it's put in properly, and check the surrounding resistors to make sure they haven't been adjusted.

QST might have run a review of this receiver; around that time they seemed to review quite a few low-end, solid state receivers.

Thanks for the reply.
Well, this evening I did some work on the thing. I found
the original RF amp FET had been replaced with a very poor
equivalent. Original, I believe, was a 2SK19-GRN and a
2N3819 was in its place.
On a lark, I replaced that with an old FET that I found here
in the shack, left over from some other project...2SK125?
that I can't seem to cross-reference anywhere. Performance
is noticeably better, but there's still plenty of room for
improvement.
When I had a R-599A Kenwood many moons ago, I had severe
overload problems and replaced the front-end and mixer FETs
as per an article which I believe appeared in 73
Magazine---that would have been about 1974? The results
were phenomenal. It made the receiver useful when the guy
down the street was also on the air.!
I see no point in shopping around for an original
replacement 1970 vintage FET when I'm sure there's something
considerably better these days. I'd like to replace both
the RF amp and mixer and am open to suggestions for a good
modern replacement to the 2SK19Grn. Anyone with access to
some old 73s that could find that particular blurb regarding
the Kenwood could at least maybe bring me into mid 70s FET
technology!
A schematic would be a luxury!

Terry, try placing a 'FS' (for sale) ad with the description 'Western Electric' 14A Resistor lamps on the tube related Usenet newsgroups, I'll betcha someone will pick them up for a couple bucks each , at least...there are collectors of WE equipment who enjoy that type of stuff, especially if in original boxes.

Also try any antique marketplace Usenet newsgroups and websites, too. I've got a few of the resistance lamps also, (I even have some of Thomas Edison's vacuum tube relays) or I would have taken them off your hands.~~! Also you may want to ask George Fathauer if he's interested, he is a collector. If you'd like his Email address, drop me an email privately.
Good luck to you anyway.

2345. SP-600-JX parted out

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-27 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <39D266F6.C0076096@erols.com>
Source record: 60959

I've just parted out a rough shape SP-600-JX?. Various "innards" are available. Not available are the pwr xformer, chokes, and the xtal box. No knobs were on it when I got it. The dials are actually quite usable, as-is, but the bezels would need to be repainted. I've trashed all the "metal" parts. I have the front panel, but it would (believe me!) require a complete sanding and repaint. At least it ain't bent!. I have the IF cans, etc. and all the insert circuits for the turret tuner (with clips). The S-meter is OK, too. The 'lytics were trashed (no good). Let me know if you need anything and we can work something out.

2346. WTB: Hallicrafters HT-20

2348. FS: Drake T4X Panel like New

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-27 00:00:00 UTC
From: K6SDE <k6sde@my-deja.com>
Message-ID: <39D2B179.5B089A79@my-deja.com>
Source record: 60962

I have a like new Drake T4X panel for sale -- $25 + $3.20 Priority Mail
+ $.85 insurance if you wish it.
It's presently padded well and in a box ready to ship.

You can view it at:
http://www.geocities.com/k6sde/T4X_Panel/T4X_Panel.jpg

Realize that the digital picture has been "sharpened" which makes edges
look distorted and the panel is truly free of anything that I would
consider a blemish except for a few scratches which are at the very ends
and hidden by the case lips. It
has NOT been repainted or otherwise touched up. I do see that the black
mark in the dial window appears to be narrow at the bottom though you
don't see that when the knob is mounted.

From: Terry Sanford <tsanford@roadrunner.nf.net>
Message-ID: <39D16E46.109D1B90@roadrunner.nf.net>
Source record: 60944

I have just found a small quantity of Western Electric/Northern Electric
14A 'Resistor Lamps'. They look very much like radio tubes.
They are a smallish 'glass tube' size; clear glass with a typical black
plastic octal base; inside there is a simple straight metal wire lamp
type filament arranged in a double vee.
Pin 6 is blank-i.e. missing. Other 7 pins are present with zero ohms
between pins 1 and 2; and 12 ohms (at room temperature) beteween pins 7
and 8. Other pins no connection.
These, AFIK, were ringing supply 'lamps' from telephone exchange
equipment, probably used in the ringing suppy distribution to various
equipment. Probably having a positive temperature coefficient so as to
increase resistance with increase of ringing current in the event of a
ringing fault condition on outside lines.
My question is; Are these of any other use or value or shall I just
scrap them for use as octal plugs?
If this question is off topic for this group, my apologies and any
information or suggestions will be welcomed.
Terry S. Eastern Canada.

The best source for NOS can type (FP and others) electrolytic caps that I know of is A.G. Tannenbaum & Co. They have their inventory listed, in part, at www.agtannenbaum.com. They've got a couple *thousand* different voltage-capacitance combinations (and plenty of multi-section caps too) available, all the famous brands, Sprague, Mallory, etc. I have been very happy with their product and service, if their prices are a little bit above what you might pay through another source, they do seem to have everything (other NOS parts as well). Hop ethis helps.

The only reason I suggested getting it back to it's original state
was to see if the replacement transistor was the problem. I even
mentioned the resistors in case someone had changed the biasing
to accomodate the different transistor.

As someone says, the J310 is pretty good, and it's cheap. The U310
as far as I can tell is the same device, but in a metal package.

But as he also said, merely changing the device may not show an improvement, and may make things worse, unless the biasing is changed to deal with the different device.

This is what I was getting at before, when I talked about the evolution of solid-state receivers, and mentioned transistors that were biased at higher current. It wasn't simply that better transistors came along, but that someone pointed out that if you take something like a transmitting transistor, and biased it to handle strong signals, you'd get a stage better able to handle strong signals. You can see the same thing with tubes, because there were receivers that used transmitting tubes in the RF stages.

I suggested seeing if there was a QST review of this receiver because back then, QST often included portions of the circuitry in the reviews, and the front end was something they were interested in showing at that time. I'm picturing 68, 69 or 70, though I may be wrong about when the receiver was available. (I can picture a review of a Lafayette receiver around that time, maybe the HA-650? I do see an ad for one receiver that I was sort of visualizing, the HA-800, which was ham-band only, including 6 meters, and was double conversion and had 3 FETs in the front-end.) I did check my QSTs for those years (which were never complete, and some of the issues from that period weren't with the ones I checked), and found no sign of it. (I did find the review for the Radio Shack DX-150 (March 1968, they said it was prone to overload from local signals) and the DX-150A (September 1970, which says the differences were internal, and shows the RF stage, 2 2SK19s in a cascode configuration). I do see a blurb for the HA-600A in a 1972 magazine, and it physically resembles the HA-800, which is blurbed right below, so I was picturing it right.)

I couldn't find any article in 73/74/75 73 about the Kenwood, but again they aren't all together so I couldn't check every issue. I don't remember such an article at that time, but I do have a vague remembrance of something after the magazine went to the large format, which was in 1976.

For what it's worth, my 1974 HEP replacement guide shows the same replacement for the 2SK19, the 2N3819, and the 2N4416. Probably doesn't mean much, since there were only a few FETs in the HEP line. No sign of a 2SK125.

My ECG replacement guide from about 1990 has no entries for either of the 2SK FETs mentioned, though both the 2Sk121 and 2SK127 are there, and cross to a general purpose, low noise audio amp.

And my Siliconix FET data book from 1977 lists the 2SK19, but shows no equivalent or data.

Again, I suspect there are limits on how great you can make this receiver work, even if you can find a better device for the RF stage and mixer, and bias those stages properly.

I earlier suggested a high pass filter to get rid of the local broadcast station. Since this was a commonly suggestion for strong local signals,

you might ask around to see if anyone has built one and found it useful with that vintage of solid-state receiver.

Michael,

Hi, and thanks for the long note.

See my comments interspersed...

> The only reason I suggested getting it back to it's original state
> was to see if the replacement transistor was the problem. I even
> mentioned the resistors in case someone had changed the biasing
> to accomodate the different transistor.

Well, having changed the transistor, I can pretty reasonably
say that the replacement unit used originally was indeed
inferior (it was a 2N3819, same as mentioned in your '74
guide). Given the visible lack of craftsmanship and skill
by the person who changed it, I can also safely say that no
other components were changed.

> As someone says, the J310 is pretty good, and it's cheap. The U310
> as far as I can tell is the same device, but in a metal package.
>
> But as he also said, merely changing the device may not show an

> thing with tubes, because there were receivers that used transmitting
> tubes in the RF stages.

This is why I wanted the 73 article to reference to. I did
as it suggested when I tried it back in the 70s and the mod
was perfect. I wanted to see if I could apply some of the
same rules to this receiver with specific data and component
values.

>
> I suggested seeing if there was a QST review of this receiver because
> back then, QST often included portions of the circuitry in the reviews,

I did see that the HA-800 had a product review, but it is
substantially different than the HA-600(A).

>
> find the review for the Radio Shack DX-150 (March 1968, they said
> it was prone to overload from local signals) and the DX-150A (September

> the HA-600A in a 1972 magazine, and it physically resembles the HA-800,
> which is blurbed right below, so I was picturing it right.)

I remember listening to the DX-150 in a Radio Shack store
when it came out and it was atrocious in regard to overload
handling. So was the Astro 102BX, so was the Kenwood R599
and countless others in the early 70s. My QTH (and the
store) at that time were about a mile away from 50kw WBT.
One local chap had the folks from Drake come to his shack to
see what was with all his complaints about the TR-7
overloading. So there's no denying that the earliest
vintage solid-state receivers were indeed lacking in this
area of performance, something that was basically cured
within a few years by better transistors, and the better
configurations they offered.

> For what it's worth, my 1974 HEP replacement guide shows the same
> replacement for the 2SK19, the 2N3819, and the 2N4416. Probably doesn't
> mean much, since there were only a few FETs in the HEP line. No sign

> My ECG replacement guide from about 1990 has no entries for either of
> the 2SK FETs mentioned, though both the 2Sk121 and 2SK127 are there,
> and cross to a general purpose, low noise audio amp.
>
> And my Siliconix FET data book from 1977 lists the 2SK19, but shows
> no equivalent or data.

I'm working with a '92 SK guide in crossing some of the
options. Basically, my decision is to avoid anything that
was available in the late 60s, early 70s. The 2SK19 went
obsolete for a reason, as did whatever was in my Kenwood
R599. If you recall as I do, the early 70s HEP, etc product
lines were very limited and they were pretty broad in
crossing what few components they offered at the time, so
backwards crossing isn't recommended except for general
purpose repair.

>
> Again, I suspect there are limits on how great you can make this
> receiver work, even if you can find a better device for the RF stage
> and mixer, and bias those stages properly.

This is a 60 dollar receiver on its finest day. I bought it
as non-working for $24. I'm not expecting much, but if a
plastic $10 off-brand chinese walkman can pick up 1480 AM
without it being drowned out by a station on 1370, I'd like
to think this "communications receiver" could also.

>
> I earlier suggested a high pass filter to get rid of the local broadcast
> station. Since this was a commonly suggestion for strong local signals,
> you might ask around to see if anyone has built one and found it useful
> with that vintage of solid-state receiver.

High pass doesn't make much sense unless I'm willing to
disable the BC and LW bands (which I'm not), but a notch
could aid a bit. The receiver isn't particularly well
shielded so that would limit the effectiveness of a notch
filter. And, the next person who owns the rcvr may have
more than one local station (or none) to contend with, so
thats only a stop-gap fix to mask an inherent problem that I
would rather make an attempt to remedy.
>
> Michael VE2BVW

I'm pretty rusty on my solid state techniques being a tube
guy but this experiment needn't be such a challenge. I
haven't gotten very deep into the receiver due to lack of a
schematic...could be there is in fact another ill thats
making it perform so badly. But as long as I'm juggling
mixer/RF transistors, my original posting was to get some
ideas of which numbers are in vogue these days so that I can
order a few of each.

Brian - You might verify the various voltages or listen for a signal on a new by receiver. You should be able to hear the VFO.

After getting the drawing check for the various voltages at each tube in the transmitter chain.

Good luck with a great old rig.

I have an ailing Drake AC-4 that is available. It's physically nice, cables are fine, but when I attempt to use it, the output from the transmitter pulses (looks like a string of pearls in the monitor). If someone wants this power supply, be prepared for repair work. I don't have the time nor inclination to do it myself.

Schematic available if you need it. (My guess is that's nothing more than a blown diode or two.)

Price is $40. Add shipping, which is billed at actual cost. First money takes it.

Thanks!

Actually, BAMA isn't down. It is running so hard its tongue is
hanging out!! The level of use of the server has increased
dramatically over the past few months. You are competing for one of
five anonymous ftp connections to the server.

The best way to download from BAMA is by using an ftp program. That
way, once you are connected and downloading, you can get the whole
folder before you are disconnected. Also, the time of day that you
are trying to download is probably a factor. I had a quick look at
the BAMA stats and the level of use is lowest between 2am and 6am
eastern. By 7am the use level is much higher and it stays high the
rest of the day. Some ftp clients will let you program to start
downloading at a set time.

If all you need is the schematic, you can probably get it at
http://www.circuitarchive.co.uk/heath.htm

Good luck and 73,

Hi Brian.

I had ran into the same problem with my Valiant. No grid current and drive on either AM or CW. A buddy of mine helped me troubleshoot this boat and found that the 300 ohm choke going into the input stage of the drive circuit was open. Somehow, after all month trying to figure out what was going on, he found the choke. Maybe try looking in that area of your 100. It may seem like the tubes but it wouldn't. Know what I mean? Just my 20% of 10 cents... 73

I used an HX50A for about 6 years during the 70s and got
nothing but excellent reports with it both on SSB and CW. It
has a somewhat wide, but sharp SSB crystal filter...3.1 kc
comes to mind. I wouldn't hesitate to use one again.
The majority old vintage rigs need new filter capacitors,
and any other paper capacitors should be replaced. Tubes
may or may not be bad. The rest is mostly cosmetics
cleaning and oiling up the controls if its been stored away
for any length of time. Re-alignment usually isn't
necessary, but by all means do it if you are able.

2398. FS:GPS antennas for sale,$55,Still have a few left!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-28 03:28:53 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39D2BA9A.62EB2F4F@home.com>
Source record: 60977

I still have for sale a few of these real neat GPS antennas. Please check
out the 3 pictures for full information. Several of these have been sold to HAM in the San Diego area and they just love them! Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS II, II+, GPS III and similar units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Can provide coaxial jumper if needed. Will ship internationally, buyer pays full AIR mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

2399. Heathkit DX100 Help?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-28 03:29:04 UTC
From: n3xbu@aol.com
Message-ID: <20000927232904.08668.00000262@ng-fd1.aol.com>
Source record: 60976

Hi Guys,

I inherited a DX100 recently. All tubes check good. No grid current or drive though, either on phone or CW. No obviously bad parts or smelI and nothing looks burnt. I have no manual and the BAMA site appears to be down temporarily.

Any one have any ideas on troubleshooting or know where there is another site that has the DX100 manual?

Thanks, Brian K3VR

I have the following amateur radio equipment for sale locally in
the Dallas - Ft. Worth, Texas area.

1) Swan 500CX Transceiver with 117 power supply.
Tube rig, specs at: http://www.pcs.mb.ca/~standard/500.htm

Setup includes:

DD-76 Digital Frequency Readout
510X accessory crystal control box with 9 xtals
Turner +3B microphone

Pwr supply could use re-capping soon(slight hum),
as such I'm rating it a 6.5 and asking $200
for the setup. Can demo on air.

2) Heathkit HW-16 with Matching HG-10B VFO.
Triband Novice CW tube rig, very clean, one
paint chip on lower front panel where cabinet
slides on, so it's a 7, sell for $100.

3) MFJ-1026 Antenna Noise Canceller.
Product description at:
http://www.mfjenterprises.com/filters/mfj1026.html
Like new, $100.

Pick up only, Dallas 635 & 75 area.
If interested please respond direct via e-mail.

Tnx,
Glenn, KD5HCL

>doesn't bring it to life, check for plate and screen voltage on all the
>tubes. You may have missed a screen or plate bypass capacitor.
>
>--
After that lot it's time to go round with signal generator. A question,
do you have a manual?, life is a lot easier if you have.

With the RF and AF gains at max (fully clockwise), the mode switch at
REC MOD and the AVC switch at MAN.

You basically start from the back and work forwards. Inject some audio,
say 400 Hz, into the grid, pin 5, of V11 (6K6GT), you should get a note
out of the speaker. If not then fault in last AF. Inject audio into
grid of V10 (6SJ7) If no note then fault in circuit around V10. Inject
455kHz modulated with some audio into pin 5 of the second detector V8
(6H6). This should give you a note. Again, if ok so far but no note
then fault around detector, AVC and possibly noise limiter circuit.

If you get this far then the fault is in the RF sections of the set.
So, inject your modulated IF frequency, oh set the selectivity at 1, the
broadest setting, this will allow you to get the IF nearly right on the
signal generator, where were we. Ah yes, inject the modulated IF into
pin 4, the grid, of V7 (6SG7). You should get a note. You may have to
move the sig generator back and forwards a bit before you get a note,
depends on how well the IF is setup. If no note then the problem is
aroud this valve. Next one is V6 (6SG7) same pin same test.
next one is V5 (6SG7) same pin, same test.

Next one is the 1st detector V4. We start getting a little complicated
here. This valve is the RF - Local Oscillator mixer. So at this point
we check whether the LO is working. Hang your frequency counter on pin
5. This should read about 455kHz more than the tuning setting. If no
signal (an oscilloscope may be useful at this point) or the frequency is
miles away then your local oscillator V3 (6J5) and its associated
circuitry is misbehaving. If the LO is ok then inject your modulated IF
frequency into pin 8 of V4. If this gives a note then set your sig
generator at something close to whatever the receiver is tuned to and
inject (with modulation) into pin 8 of V4. You will have to vary the
sig generator to get the exact frequency. This should then give a note.
If nothing then the problem is around V4.

Now we are into the RF amps at the start of the RX. inject the
modulated signal into pin 4 of V2 (6SG7), again if note ok, if nothing
then problem around V2, same test same pin on V1 (6SG7).

Unless problem with a valve the most likely cause will be a dodgy
switch. check the multi gang wave change switch as all of the RF goes
through this. One dodgy wiper and the RF/IF chain is broken.

If you want to you can still get the bath tub caps if you look around.
If you want authenticity that is.

Robin

PS: If you get stuck I can talk you thorough the circuit by EMail. A
warning, don't try setting the IFs without a wobbulator.

2416. WTB: (or Trade) Large-Digit Nixie Tubes & Sockets

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-29 00:00:00 UTC
From: afranzman@aol.compute.com
Message-ID: <20000929181811.20227.00000479@ng-cg1.aol.com>
Source record: 60927

Wanted, to Buy or Trade:

(Sorry if this isn't quite on-topic. There don't seem to be any newsgroups exactly fitting this subject.)

Large-digit "Nixie" type neon numeric digital display tubes, especially those with digits over 1 inch (25mm) tall. Also, sockets for same.

Most wanted: Burroughs type B-7031 or B-7032 "Jumbo" size - 2 inch (50mm) tall digits in a tube 5.5 inches (140mm) tall by 2.25 inches (57mm) diameter at the base. And the large 14-pin sockets which fit them, type SK-117 or equivalent, having a pin circle diameter of 1.75 inches (45mm).

Actually, I have 5 of the very rare B-7032's, which are the inverted display configuration variation of the B-7031 (pins on top pointing UP when digits are upright). Mine are slightly to moderately darkened; however, due to anode location in these tubes, the darkening is mainly on the sides of the glass and does not significantly affect digit appearance when viewed from the front. All have been tested and function perfectly when driven in the 10-16mA range per preliminary B-7031 data which can be seen here: http://www.wps.com/archives/tube-datasheets/Datasheets/Burroughs-catalog-918A/index.html Will consider trading my B-7032's if I can get more and/or better condition B-7031's in the deal.

I also have available to trade, "Super" size Nixies of types B-6091 / NL-8423 (a.k.a. NL-5423, and interchangable with earlier types B-7153, B-6033, and BD-206). These have digits .808 inch (20mm) tall, in end-viewed configuration. In addition, I have Philips (Mullard) type ZM1040 which have digits 30mm (1.18 inches) tall and a red filter coating on the glass. I have sockets which fit both of these tube types, equivalent to HSK-112, HSK-106, B13B, and VH13/131.

Does anyone in southern California happen to have any of the HUMONGOUS Nixies with ***6 INCH TALL DIGITS***, type CD47/GR414 Rodan Indicator Tube by Okaya Electric Industries Co. Ltd. of Japan? Picture here: http://www.netcomuk.co.uk/~wwl/count.html Even if you're not willing to part with one, I'd love to just see one in operation. I can even build and bring a breadboard driver circuit if you don't have one.

Replies by email please. See below for a clue to repair my email address. 73.

Alan "A.J." Franzman

2418. WTB- Parts for a Lafayette HA-460 6 meter xcvr (or parts rig)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-29 01:32:27 UTC
From: ezela57383@aol.com
Message-ID: <20000928213227.21524.00000068@ng-fz1.aol.com>
Source record: 60905

Wanted---for my Lafayette HA-460 six meter AM transceiver:

AC and DC power cables (with 11 pin sockets)

VFO and receiver tuning dials (with clear frequency markings)

Will also purchase HA-460 parts rig containing the above parts.

Thanks
Emil

2419. Power cable wiring for Lafayette HA-460 6meter rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-29 01:41:20 UTC
From: ezela57383@aol.com
Message-ID: <20000928214120.21809.00000056@ng-fz1.aol.com>
Source record: 60906

Can anyone advise the pin-to-pin wiring for the AC and DC power cables for the Lafayette HA-460 six meter AM transceiver? The HA-460 uses an 11 pin socket and the manual provides no information.

Thanks!

Emil

Check tis item out great for tear down for parts or use as is.
photos on ebay
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=451271757

Good luck

CU-419B/SRA-13 manually controlled navalrd antenna couplers that can be used as is or for parts. The are very conservatively rated at 500 watts CW. My guess they will Handle much more.

They contain one of each of the following major components.
25 to 700 uuf, 12V Vacuum Variable Capacitor with drive. Jennings UCS700

1 each dual section 50 to 4,000 uuf Air variable per capacitor/section.
Approx. size: 10 " L X 6: W
This is a pair of capacitors ganged together by a gear drive.
RF coil 11 turns with variable loop
RF watt meter 500 Watt range with directional coupler.
net weight: 43 Lb, Approx. Size 25" W X 15"D X 9" H
These are unused FOB Somis, sold untested
Supplied with a schematic and a copy of the parts list.
for more details please contact me.

there are four in stock

>doesn't bring it to life, check for plate and screen voltage on all the
>tubes. You may have missed a screen or plate bypass capacitor.
>
>--
After that lot it's time to go round with signal generator. A question,
do you have a manual?, life is a lot easier if you have.

With the RF and AF gains at max (fully clockwise), the mode switch at
REC MOD and the AVC switch at MAN.

You basically start from the back and work forwards. Inject some audio, say 400 Hz, into the grid, pin 5, of V11 (6K6GT), you should get a note out of the speaker. If not then fault in last AF. Inject audio into grid of V10 (6SJ7) If no note then fault in circuit around V10. Inject 455kHz modulated with some audio into pin 5 of the second detector V8 (6H6). This should give you a note. Again, if ok so far but no note then fault around detector, AVC and possibly noise limiter circuit.

If you get this far then the fault is in the RF sections of the set. So, inject your modulated IF frequency, oh set the selectivity at 1, the broadest setting, this will allow you to get the IF nearly right on the signal generator, where were we. Ah yes, inject the modulated IF into pin 4, the grid, of V7 (6SG7). You should get a note. You may have to move the sig generator back and forwards a bit before you get a note, depends on how well the IF is setup. If no note then the problem is aroud this valve. Next one is V6 (6SG7) same pin same test.
next one is V5 (6SG7) same pin, same test.

Next one is the 1st detector V4. We start getting a little complicated here. This valve is the RF - Local Oscillator mixer. So at this point we check whether the LO is working. Hang your frequency counter on pin 5. This should read about 455kHz more than the tuning setting. If no signal (an oscilloscope may be useful at this point) or the frequency is miles away then your local oscillator V3 (6J5) and its associated circuitry is misbehaving. If the LO is ok then inject your modulated IF frequency into pin 8 of V4. If this gives a note then set your sig generator at something close to whatever the receiver is tuned to and inject (with modulation) into pin 8 of V4. You will have to vary the sig generator to get the exact frequency. This should then give a note. If nothing then the problem is around V4.

Now we are into the RF amps at the start of the RX. inject the modulated signal into pin 4 of V2 (6SG7), again if note ok, if nothing then problem around V2, same test same pin on V1 (6SG7).

Unless problem with a valve the most likely cause will be a dodgy switch. check the multi gang wave change switch as all of the RF goes through this. One dodgy wiper and the RF/IF chain is broken.

If you want to you can still get the bath tub caps if you look around. If you want authenticity that is.

Robin

PS: If you get stuck I can talk you thorough the circuit by EMail. A warning, don't try setting the IFs without a wobbulator.

From: Jeff James
Subject: Eimac Serial# Question

Hi all,
Just received an Eimac Jan 4-400A from a reputable dealer..comparing the

old Eimac with the new -two observations: There is no etched serial
number on the shroud inside the tube; and the tube feels lighter with
smaller "fins"..The date code on the box is 1984.
Any thoughts?
Thanks,
Jeff W2NBC

From: afranzman@aol.compute.com (A.J. Franzman)
Subject: WTB: (or Trade) Large-Digit Nixie Tubes & Sockets

Wanted, to Buy or Trade:

(Sorry if this isn't quite on-topic. There don't seem to be any
newsgroups
exactly fitting this subject.)

Large-digit "Nixie" type neon numeric digital display tubes, especially
those
with digits over 1 inch (25mm) tall. Also, sockets for same.

Most wanted: Burroughs type B-7031 or B-7032 "Jumbo" size - 2 inch
(50mm) tall
digits in a tube 5.5 inches (140mm) tall by 2.25 inches (57mm) diameter
at the
base. And the large 14-pin sockets which fit them, type SK-117 or
equivalent,
having a pin circle diameter of 1.75 inches (45mm).

Actually, I have 5 of the very rare B-7032's, which are the inverted
display
configuration variation of the B-7031 (pins on top pointing UP when
digits are
upright). Mine are slightly to moderately darkened; however, due to
anode
location in these tubes, the darkening is mainly on the sides of the
glass and
does not significantly affect digit appearance when viewed from the
front. All
have been tested and function perfectly when driven in the 10-16mA range
per
preliminary B-7031 data which can be seen here:
http://www.wps.com/archives/tube-datasheets/Datasheets/Burroughs-catalog
-9
18A/index.html Will consider trading my B-7032's if I can get more
and/or
better condition B-7031's in the deal.

I also have available to trade, "Super" size Nixies of types B-6091 /
NL-8423
(a.k.a. NL-5423, and interchangable with earlier types B-7153, B-6033,
and
BD-206). These have digits .808 inch (20mm) tall, in end-viewed
configuration.
In addition, I have Philips (Mullard) type ZM1040 which have digits

30mm (1.18
inches) tall and a red filter coating on the glass. I have sockets
which fit
both of these tube types, equivalent to HSK-112, HSK-106, B13B, and
VH13/131.

Does anyone in southern California happen to have any of the HUMONGOUS
Nixies
with ***6 INCH TALL DIGITS***, type CD47/GR414 Rodan Indicator Tube by
Okaya
Electric Industries Co. Ltd. of Japan? Picture here:
http://www.netcomuk.co.uk/~wwl/count.html Even if you're not willing
to part
with one, I'd love to just see one in operation. I can even build and
bring a
breadboard driver circuit if you don't have one.

Replies by email please. See below for a clue to repair my email
address. 73.

2428. FS:External Antenna for your Garmin GPS,$55,Free Ship

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-30 00:00:00 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39D5EEC9.F0FC8B74@home.com>
Source record: 60797

Still have some of these antennas. Everyone who has purchased one likes them!
Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the
antenna when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

2438. WANTED: VXO circuit for Hallicrafters HT32-A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-30 00:00:00 UTC
From: Richard Fullerton <no_email@address.com>
Message-ID: <JMqB5.3135$L12.80695@news2-win.server.ntlworld.com>
Source record: 60807

I'm wanting to operate my Hallicrafters HT32-A using a VXO rather than the VFO. I'd prefer a tube circuit if possible, but would go with transistors if I had to. Below is the VFO circuit. Can I modify this to make a VXO or would I be better off using another circuit entirely? VFO output is from 5.0 to 5.5 Mhz. I think output needs to be filtered as in the original VFO circuit (by T3.) Obviously, RF output needs to be of same order of volts or thereabouts.

i'm winding tuning coils for a homebrew radio and i was wondering if
there was any formula to figure out coil diameter,number of turns, wire
size ect, ect, ect?????
this radio right now receives the regular am broadcast band from 53 to
160 kc.
i'm hoping to have multiple plug in coils to cover as many frequency
bands as possible!!
is this a worthy goal or is it impossible??
any in put would be greatly appreciated.
thanks
charles

2441. Re: DX100 and 1959 QST

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-09-30 00:00:00 UTC
From: Stephen Libby <s.libby@worldnet.att.net>
Message-ID: <uosB5.1181$0n.99958@bgtnsc05-news.ops.worldnet.att.net>
Source record: 60810

Brian

I have a copy of that issue of QST. It's a very short "hints and Kinks" article (1/4 page). It describes fixes for "wrong way" grid current for both the Apache and the DX-100. The fix for the DX-100 involves disconnecting the 500K clamp circuit pot from one side of the 5.4 ohm meter shunt and reconnecting it to the other side of the shunt. For the DX-100, it suggests adding a new insulated terminal and mounting it on the spade bolt that holds the vfo bracket adjacent to the 500K ohm clamp circuit pot (see pictorial 7, page 3 of the DX-100 instruction book). Remove the violet wire and 5.4 ohm resistor from terminal 3 of the 500K clamp circuit pot. Reconnect these leads to the new insulated terminal. Then connect the vacant pot terminal (3) to the other side of the 5.4 ohm meter shunt. The original "hint and kink" was written by W1LUW, Harold C. Jensen.

Hope this helps.

Steve, W2XU

From: chuck
Subject: coil winding

i'm winding tuning coils for a homebrew radio and i was wondering if
there was any formula to figure out coil diameter,number of turns, wire
size ect, ect, ect?????
this radio right now receives the regular am broadcast band from 53 to
160 kc.
i'm hoping to have multiple plug in coils to cover as many frequency
bands as possible!!
is this a worthy goal or is it impossible??
any in put would be greatly appreciated.
thanks
charles

From: "Stephen Libby"
Subject: DX100 and 1959 QST

Brian

I have a copy of that issue of QST. It's a very short "hints and Kinks"
article (1/4 page). It describes fixes for "wrong way" grid current for
both
the Apache and the DX-100. The fix for the DX-100 involves
disconnecting
the 500K clamp circuit pot from one side of the 5.4 ohm meter shunt and
reconnecting it to the other side of the shunt. For the DX-100, it
suggests
adding a new insulated terminal and mounting it on the spade bolt that
holds
the vfo bracket adjacent to the 500K ohm clamp circuit pot (see
pictorial 7,
page 3 of the DX-100 instruction book). Remove the violet wire and 5.4
ohm
resistor from terminal 3 of the 500K clamp circuit pot. Reconnect these
leads to the new insulated terminal. Then connect the vacant pot
terminal
(3) to the other side of the 5.4 ohm meter shunt. The original "hint
and
kink" was written by W1LUW, Harold C. Jensen.

Hope this helps.

From: Robert Lonn
Subject: FS:External Antenna for your Garmin GPS,$55,Free Ship

Still have some of these antennas. Everyone who has purchased one likes them!
Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the
antenna when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union

money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

Subject: RCA AR77 Vintage SW Radios

A boatanchor project awaits you - RCA AR77 restoration challenge:

Date: Sat, 30 Sep 2000 23:02:56 -0400
From: "Chuck O'Neal"
Subject: SX 115 mint/GPR 90 SB unit/ speaker F/S

If you know what they are worth, how about starting with an asking price?
The going value is all over the place between ebay and flea markets.

For example: SX-115 ebay: $3K+ , last flea market I went to had two and
they went for $300 and $450. I got the one for $450, mint in original
box.
Thanks!
Chuck..K1KW

From: "Michael Feldt"
Subject: Wanted: Hickok 118b Manual - Tube Test Conditions.

Just recently purchased a extremely nice and electronically sound Hickok
An\USM-118B cardmatic tube tester. Looking for a "Navships
0967-113-6050,
Technical Manual - Tube Test Conditions" manual. Also looking for the
3047-3
mercury battery calibration cell. I already have the 3047-4 zener diode
version.

Happy Collecting
Michael Feldt

From: "Richard Fullerton"
Subject: WANTED: VXO circuit for Hallicrafters HT32-A

This is a multi-part message in MIME format.

------=3D_NextPart_000_0036_01C02B19.7D2C35C0

charset=3D"iso-8859-1"

I'm wanting to operate my Hallicrafters HT32-A using a VXO rather than
the VFO. I'd prefer a tube circuit if possible, but would go with =3D
transistors

if I had to. Below is the VFO circuit. Can I modify this to make a VXO
or would I be better off using another circuit entirely? VFO output is
=3D
from
5.0 to 5.5 Mhz. I think output needs to be filtered as in the original
=3D
VFO
circuit (by T3.) Obviously, RF output needs to be of same order of volts
=3D
or=3D20
thereabouts.

There are books with such formulas. A good place to start is to go to your local library and get a copy of the "Radio Amateur's Handbook" from the ARRL, and look for any other books about building amateur radio equipment.

In fact, there are often construction articles about building radios with plug-in coils. If there is more than one year's issue of the Handbook, be sure to look thru them all. Especially the chapter on receiver projects, obviously.

What a great day!

From: chuck <c.foster@aci.on.ca>
Subject: coil winding

Dear Charles.

There is indeed a formula for coil winding, and this can be found in various books on radio theory. A trip to the library or a visit to a radio club should help you find what you are looking for. I could send it to you on a postcard, if you give me your address.

The idea of plug-in coils is not new. Consider that well-known boatanchor, the National HRO, with its plug-in coils for various bands. Several years ago a construction article in RadCom featured a transceiver which used plug-in coils. Indeed another wartime set, used by S.O.E. radio operators was the B2 suitcase transmitter and receiver, which used different plug-in coils and crystals. Although the operator had more bits and bobs to worry about, it did simplify construction and repair.

If you can get hold of a Grid Dip Oscillator, this is a useful device for determining the resonant frequency of a LC combination. Again, it would be worthwhile approaching a local radio club for advice, or a radio ham who might agree to be your "Elmer".

Best of luck on your "home brew" project!

Regards, John GM0KTO

As one gentleman said, the prices are all over the place for the SX-115s.The last one I last one I saw one on e-bay went for $1200 and I've seen them as high as $3000 (on e-bay). At swaps I've seen then like new for $350, to $450.

If your's is like new and in the original box, and works like new, I'd go $450 to $500
If you want higher, they you probably should go to e-bay, although you may find a live one here.

Respectfully,

Roger Halstead

Presumably a superhet? If so you have to calculate fror 'tracking' the
local oscillator and the RF tuning on the different bands.

2480. FS:Plug in Solid state rectifiers for 872A's, 866's

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-01 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20001001152730.26411.00000032@ng-ce1.aol.com>
Source record: 60838

FS : Pair of Plug in rectifiers for 872'A tubes. Made by Wilkinson Electronics. No modification needed for your equipment, just plug them in, install plate cap and fire them up. These were pulled from an old RCA transmitter that was working when pulled out of service in 1990. They have 18 rectifiers on them with the balancing resistors, caps, and neon lamps for each rectifier. I have no way to test them but I did check for shorts across each diode with a Simpson 260 VOM and none are shorted or open. $49 shipped to your door. I also have a set for 866's. They have 10 diodes each and are $30 shipped. Same deal as for checking them out.
Thanks,
Jim

Over 60?? You must be a young guy. Why would any one in this day and age,
think about giving up at 60?

I still plan on collecting and reconditioning at 80.

I took up skating at 57 and am soing some jumps (and working on the rest) at
60, fly airplanes, instrument rated, climb and work on towers and do
aerobatics.
I'm currently building an airplane capable of 350 MPH and aerobatics.

I told my wife if she outlasts me to give specific pieces to specific
people, specific pieces to the local club and ask the club to put the rest
on e-bay where it should bring far more than a standard market price.

Is it really junk to every one, or is it come of the old collectable stuff?
All to many hams don't take care of the "old" equipment and corrosion and
rust really drop the value.

- I'm a ham myself, and believe me, it's junk.
> I've started cleaning it out for her as best I'm able, but suffice it to
> say my evenings and weekends are now booked through late fall :b There

> are several tons (I'm not exaggerating) of gear and old radio books that
> have been quietly rotting away for the past 20 years - the man never
> threw anything away!

Tain't nothing wrong with that as long as the stuff is kept dry.
I cleaned out the basement a few years back and now I find it was probably worth a total of $20,000 on e-bay. Gave a bunch away and threw a bunch out (to make room for more) Now I keep finding uses for the stuff.

"Boy, I sure wish I had that back." is a common phrase.

> Due to the recycling regulations in the town, most
> of it cannot be put out for curbside pickup, necessitating the rental of
> a 40 cubic yard dumpster - as I discovered, they are not cheap.
Magazines certainly should be recyclable.

I'd think transformers, powersupplies, and tubes would be taken by the local radio club(s)

>
Those old radio magazines should be worth a small fortune.

I finally gave all my old radio magazines away to a young guy who had an interest on them (they were all in ery good shape)

> I would say to anyone, older or not, who has a big collection of
> equipment of dubious worth: either get rid of the stuff now by any
> means,

Now, wait a minute...Every time I've thrown *anything* away, I found a need for it within one week and then had to go buy a new one, or worse yet, have one made up. Throwing anything away is a sure fire gurantee that you will need it.

> or make arrangements for its disposition in the event of your
> death so that your family is not saddled with the task of disposal
> during what should be a time of mourning.
>

Too bad the US doesn't take on the idea of the Irish Wake.
Throw a big party and remember the departed foldnly, instead of a bunch of people sitting around feeling bad.

Actually the way the people in the US do it they are better off having something to do to take their minds off the occasion.

As to my cherrished equipment, I built a heated, workshop for all my toys except the main station(s) and computers. Gotta run the network out to a smart terminal in the shop.

BTW, the shop is exactly the same area as our house.

Roger (K8RI)

Over 60?? You must be a young guy. Why would any one in this day and
age,
think about giving up at 60?

I still plan on collecting and reconditioning at 80.

I took up skating at 57 and am soing some jumps (and working on the
rest) at
60, fly airplanes, instrument rated, climb and work on towers and do
aerobatics.
I'm currently building an airplane capable of 350 MPH and aerobatics.

I told my wife if she outlasts me to give specific pieces to specific
people, specific pieces to the local club and ask the club to put the
rest
on e-bay where it should bring far more than a standard market price.

Is it really junk to every one, or is it come of the old collectable
stuff?

All to many hams don't take care of the "old" equipment and corrosion
and
rust really drop the value.

- I'm a ham myself, and believe me, it's junk.
> I've started cleaning it out for her as best I'm able, but suffice it =

Tain't nothing wrong with that as long as the stuff is kept dry.
I cleaned out the basement a few years back and now I find it was

worth a total of $20,000 on e-bay. Gave a bunch away and threw a bunch
out
(to make room for more) Now I keep finding uses for the stuff.

"Boy, I sure wish I had that back." is a common phrase.

> Due to the recycling regulations in the town, most

Magazines certainly should be recyclable.

I'd think transformers, powersupplies, and tubes would be taken by the
local
radio club(s)

>
Those old radio magazines should be worth a small fortune.

I finally gave all my old radio magazines away to a young guy who had an
interest on them (they were all in ery good shape)

> I would say to anyone, older or not, who has a big collection of
> equipment of dubious worth: either get rid of the stuff now by any
> means,

Now, wait a minute...Every time I've thrown *anything* away, I found a
need
for it within one week and then had to go buy a new one, or worse yet,
have
one made up. Throwing anything away is a sure fire gurantee that you
will
need it.

> or make arrangements for its disposition in the event of your
> death so that your family is not saddled with the task of disposal
> during what should be a time of mourning.
>

Too bad the US doesn't take on the idea of the Irish Wake.
Throw a big party and remember the departed foldnly, instead of a bunch
of
people sitting around feeling bad.

Actually the way the people in the US do it they are better off having
something to do to take their minds off the occasion.

As to my cherrished equipment, I built a heated, workshop for all my
toys
except the main station(s) and computers. Gotta run the network out to
a
smart terminal in the shop.

BTW, the shop is exactly the same area as our house.

Roger (K8RI)

From: Terry Sanford <tsanford@roadrunner.nf.net>
Subject: Bendix "Micro Match".

Have a Bendix Corporation: Microwave devices Inc., Subsidiary,
Farmington Connecticut "Micro match". (Damaged but repairable I think).
It is a small blue box, three (3) inches wide, five (5) inches high and
2.75 inches deep. has 'N' connectors for cables to transmitter and load.
A six (6) position switch on front is marked "Forward 30, 75, 300" and
"Reflected 300, 75, 30" (perhaps these are watts but no unit is given?).

The meter movement which occupies the top half of the front panel is in
place but has lost its front cover and dial but meter movement itself
appears to be intact!
There is a quarter inch jack on the side marked "Remote Indicator Jack".

The overall colour is blue with silver lettering.
Have tried browsing for Bendix and Microwave Device sites for info but
item/product not listed.
My guess is that it is a SWR meter for VHF frequencies (maybe up to 450
megs?). The Model Number (the front plate is scratched in that area, is
either "70N" or perhaps "7UN".
The 'N' connectors out of each side appear to be fixed; i.e. not
interchangeable as with the Bird meters I have seen.
Anyone got any suggestions about info on this, especially meter movement
details and dial markings?
Suggestions/comments welcomed please.
Terry S.

From: "Doug VL" <swordman@netonecom.net>
Subject: coil winding

There are books with such formulas. A good place to start is to go to
your
local library and get a copy of the "Radio Amateur's Handbook" from the
ARRL, and look for any other books about building amateur radio
equipment.

In fact, there are often construction articles about building radios
with
plug-in coils. If there is more than one year's issue of the Handbook,
be
sure to look thru them all. Especially the chapter on receiver projects,
obviously.

What a great day!

Presumably a superhet? If so you have to calculate fror 'tracking' the
local oscillator and the RF tuning on the different bands.

From: chuck <c.foster@aci.on.ca>
Subject: coil winding

Dear Charles.

There is indeed a formula for coil winding, and this can be found in
various
books on radio theory. A trip to the library or a visit to a radio club
should help you find what you are looking for. I could send it to you on
a
postcard, if you give me your address.

The idea of plug-in coils is not new. Consider that well-known
boatanchor,
the National HRO, with its plug-in coils for various bands. Several
years
ago a construction article in RadCom featured a transceiver which used
plug-in coils. Indeed another wartime set, used by S.O.E. radio

was the B2 suitcase transmitter and receiver, which used different
plug-in
coils and crystals. Although the operator had more bits and bobs to
worry
about, it did simplify construction and repair.

If you can get hold of a Grid Dip Oscillator, this is a useful device
for
determining the resonant frequency of a LC combination. Again, it would
be
worthwhile approaching a local radio club for advice, or a radio ham who
might agree to be your "Elmer".

Best of luck on your "home brew" project!

Regards, John GM0KTO

From: Don Levstik <kdlevstik@worldnet.att.net>
Subject: FS/FT: Kenwood R599 receiver & manual

I have for sale a Kenwood R599 receiver.=20

Please see pictures at:
http://home.att.net/~kdlevstik/ham/r599.jpg

The receiver is 100% solid-state.
Bands are 160/80/40/20/15/10 meters. Also receives 10Mhz WWV and the=20
30 Meter ham band at 10.1-10.15Mhz.

Comes stock with 500Hz/2.5Khz/5Khz/25Khz filters, selectable in any
mode.
Modes are: AM/FM/USB/LSB/CW.=20

Electrical condition is perfect. Cosmetically very good with small
dent in chrome on front left side. Small hole in cover-plate where
optional six meter antenna goes (easily replaced). Radio doesn't have
the=20
optional converters. Does come with brand new R599A/D service manual.

Partial trade possibility:
If you happen to have a 1.8Khz filter for the TS-520 (3.395Mhz if)
and would like to trade, I will take another $50.00 off the price of=20
the R599. I will also consider the same trade for an SP-520 external=20
speaker.
=20
Terms: USA sale only. Certified check/money order for $200.00 or=20
$150.00 + 1.8Khz filter or SP-520. Will Ship UPS/Insured. I pay

shipping!
Will ship as soon as payment is received. (I am located in Texas)

Reason for selling: I just bought a Kenwood TS-520/VFO-520 so now I=20
no longer need the R599 :(

This is a great receiver and can be the basis for an excellent HF
station. You will not be disappointed!

Note:
Please e-mail me directly. Thanks, and take care!

Subject: FS:Plug in Solid state rectifiers for 872A's, 866's

FS : Pair of Plug in rectifiers for 872'A tubes. Made by Wilkinson Electronics.
No modification needed for your equipment, just plug them in, install plate cap
and fire them up. These were pulled from an old RCA transmitter that was working when pulled out of service in 1990. They have 18 rectifiers on them
with the balancing resistors, caps, and neon lamps for each rectifier. I have
no way to test them but I did check for shorts across each diode with a Simpson
260 VOM and none are shorted or open. $49 shipped to your door. I also have a
set for 866's. They have 10 diodes each and are $30 shipped. Same deal as for
checking them out.=20

From: ypfcfp@aol.com
Subject: Join CONSUMER'S UNION & other orgs PROTESTING AOL & TIME
WARNER! Direct link to FCC COMMENT PAGE HERE! 2926

The AOL - Time Warner merger is about to be approved by the FCC -=20
BUT - the FCC WILL REQUIRE SOME CONDITIONS! That is Definite!
Will the conditions protect ONLY THE CORPORATIONS or will they=20
also protect YOU the END USER?

At this point a very small effort on your part can well induce
the FCC to REQUIRE OPEN ACCESS - I.E. NO CENSORSHIP - for the
end user - YOU - as well as outlaw speed capping for people that
upload to USENET or IRC.

PLEASE HELP PROTECT IRC and USENET! SEND THIS LETTER TO THE FCC!

This response by you will be an OFFICIAL FILING! It will appear in=20
the OFFICIAL PROCEEDING as a comment read by ALL THE ATTORNEYS who=20
are participating in the action, as well as ALL THE FCC COMMISSIONERS! =20
It will remain there FOREVER as part of the OFFICIAL RECORD of the=20
AOL - Time Warner merger! With YOUR name on it!

The FCC is on the verge of requiring the protections this letter=20
asks for. Your letter might PUSH THEM OVER THE EDGE and make the=20
internet a BETTER PLACE for EVERYONE, INCLUDING YOU!

MAKE A DIFFERENCE TO USENET AND IRC! This letter WILL MAKE A DIFFERENCE if there are enough of them received by the FCC. If at least 300 letters are received, we can probably count on the FCC to take decisive action to prohibit both censorship and speed capping.

1. Copy the letter to a file. You can put it on your letterhead=20 with MS Word or just use a text file. You can make any change to=20 the letter you want, or add any comment you have. CHANGES ARE GOOD!=20 They show you READ THE LETTER and REALLY CARE! If you had a bad=20 experience with AOL or Time Warner PUT IT IN!

2. go to:

https://gullfoss2.fcc.gov/cgi-bin/websql/prod/ecfs/upload_v2.hts=20

(This is the official FCC page where electronic filing of petitions=20 is accomplished)

3. Fill out form

Put your name, Address, Email address, and all other required=20 information on the form. (Remember this is an OFFICIAL FILING so=20 the FCC requires this information. It is not published unless you=20 put it in the letter as well as the form)

Proceeding is=20

00-30=20

(this is VERY IMPORTANT, it is the case number of the AOL TIME=20 WARNER APPLICATION for merger. If you get it wrong, your comment=20 WILL NOT BE FILED!)

4. Send form.

5. After you send the form, THEN select the filename of the=20 letter you are sending, and send that.

6. After you send the file, you will receive an official=20 confirmation of the filing from the FCC.

7. Comment will appear for all to read in about 4 hours=20 (but won't appear on the weekend.)=20

8. If you want to see your letter, or read the other submissions, other letters, the AOL petition, the Disney or Consumer's Union=20 objections, etc, here is the URL - Its long!

https://gullfoss2.fcc.gov/cgi-bin/websql/prod/ecfs/comsrch_v2.hts?ws_mod e=3Dretrieve_list&id_proceeding=3D00-30&start=3D1

***>Remember the FORM INFORMATION will NOT appear, only the letter.

IF YOU LIVE N A FOREGN COUNTRY and wish to make a comment (This is a=20 world wide problem) the Cover Sheet will not accept your address. You can do this: Enter your real name and address including country in the address lines, but in the STATE box put CA and in the ZIP (first

field) put 90001. Ignore the 2nd zip field. Ignore the 2nd form, and=20
TYPE your SHORT COMMENT in the 3rd form. Please identify the country=20
you live in the message. Don't use the sample letter supplied=20
because it isn't appropriate for non-US residents.

NOTE: There is NO WORD WRAPPING on the letter below, to make it=20
easy for you to format so it may be hard to read until you copy it,
depending on your news reader.

To the FCC Commissioners

Gentlemen and Ladies:

The Internet is in mortal danger, and you will make the decision on
whether it lives or dies as we know it today.

As one gentleman said, the prices are all over the place for the
SX-115s.The
last one I last one I saw one on e-bay went for $1200 and I've seen them
as
high as $3000 (on e-bay). At swaps I've seen then like new for $350, to
$450.

If your's is like new and in the original box, and works like new, I'd
go
$450 to $500
If you want higher, they you probably should go to e-bay, although you
may
find a live one here.

Respectfully,

Roger Halstead

I no longer have that right if I wish to have high-speed access. There
is no effective high-speed access except Time Warner. Time Warner adds

this clause to its acceptable use policy:

TIME WARNER COMMUNICATIONS SHALL HAVE THE SOLE AND UNREVIEWABLE RIGHT TO DETERMINE WHETHER CONTENT VIOLATES THESE STANDARDS.

The "standards" are such that absolutely anything I post could be considered to violate them.

Even if I do not violate these standards, if I purchase "unlimited access" as soon as I try to use it, I am either speed-capped or terminated. The acceptable use policy states:

IF TIME WARNER DETERMINES THAT THE SUBSCRIBER HAS FAILED TO COMPLY WITH THE SERVICE'S STANDARDS OF CONDUCT OR LIMITS ON BANDWIDTH UTILIZATION, TIME WARNER MAY SUSPEND SUBSCRIBER'S ACCOUNT.

It appears that Time Warner wants only customers who do not upload any comments and who use the service merely to purchase additional services. As I have been using the internet for quite a long time to communicate, not spend money with Time Warner, Time Warner doesn't want me.

It appears that you will approve the AOL Time Warner merger in some manner. If you do not act to require the merged company to return to the basic principles of freedom of speech, there will be no hope for people like me who want to communicate, not purchase more Bugs Bunny cartoons. The new company will totally control high-speed access. People like me will not be allowed on the internet through the new company.

It seems that you will establish some protection for the large corporations. Will you protect me too?

The internet is a creation of America, and shows the world the power of freedom. It will be a sad commentary if the country which created freedom kills the most powerful voice for freedom now existing in the world. It will be a reflection on our country if all citizens of the world have freedom of speech on the internet, except American citizens.

As the internet was designed for the citizens, not the corporations, I sincerely hope you consider me when you make your decision. If you do not, I believe that the result will be the death of the internet as a powerful force for freedom in general, and freedom of speech in particular.

I have an East German SEG-15 manpack installation for sale
It is made in the late 1970's, very complete and consists of:
Basic SEG-15 manpack 2 to 12 MHz (range can be extended to 16 MHz),
SSB, AM and CW, 15 Watt HF
AC power supply 127/220 volt,
DC vehicle power supply 12/24 volt,
Battery power supply
Manpack carrier frame,
Vehicle carrier frame,
Telescopic antenna,
Speaker unit.
Accessory box with: CW key, handset, headset, mic, tools, power leads,
antenna leads, flexible antenna base and small material like fuses etc.

I'm asking 475 US$. I'm located in the Netherlands, shipping cost will be
around 70US$ when sent Economy service

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8ra51g$m3o$1@mailint03.im.hou.compaq.com>
Source record: 60875

I have for sale a WWII German army CW key and a British Air Ministry Morse key.

The Germany key is a type T1SBF and it has the German eagle stamped in the base plate.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox Identification. It was used on the Spitfire but also on other planes of the day. It was used to key the Navigation and/or Landing lights for identification purposes, when radio communication was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady.

Both key's are in good condition and I have pictures of them I can Email

Should you be interested, I'm asking 75$ per key. Shipping from Holland Will be 20$ when sent together or 15$ per key when sent separate.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=441461280

General purpose headphones suitable for shortwave and Amateur monitoring. Vinyl covered double headband with easily adjustable yokes for comfort. Powerful Hyflux Alnico magnets. 1 7/8" diaphram. 4 1/2 foot cords with PHONE PLUG. That's how the Allied Radio catalog described this headset. This headset is in very good condition. Please note that the impedance of this headset is 11 ohms, not 2000 ohms. The previous owner put 11 ohms on the headset as you can see in the picture. I verified this in my Allied Radio catalog, and they did offer both impedances.This headset is just the thing to complement your Knight Kit Star Roamer, R-55, or R100 receiver. Would also work well with the Hallicrafters and HeathKit lines.The headset is in very good condition and they work well. I guarantee that they will not be DOA, but as with any electronic item that's over 30 years old, I'm auctioning them off as is.

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $15 plus postage for the pair.

Connectix - QuickCam VC camera for your computer
This is the Parallel Port Version, excellent condition, original box,
software and manual. Requires Windows 95.
$30 shipped.

Knight Model KG-687 Sweep / Marker Generator, very good
condition but missing the handle on the top. Still has the plastic
over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's
manual, power cable and "six" brand new ribbons. This takes the
small ribbons like the Okidata type printers.
$30 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual,
power cable and 2 new ribbons.
$25 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew
and has plastic spacers installed. Bare copper wire. You need to see
the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N&#65533;SAH

> Thanks, Dave
> davidg@asheville.com

The R-366/TRR-5 receiver was a Marine Corps contract for a troop entertainment and "auxiliary" communications receiver and was built in the early 50's.
The audio amplifier in it is rated 10W, it uses 2 6AQ5 tubes in push-pull. Originally the radio was supplied with a carrying case which contained a high-quality 12" speaker.
Besides having high-powered, good quality audio, the receiver makes a fairly decent communications receiver.

Documentation is generally available through the regular surplus manual vendors.

Enjoy your receiver.

Good luck,

Meir WF2U

2532. www.ab7sl.com - 1 YEAR OLD !!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-02 00:00:00 UTC
From: Charles <charles@ab7sl.com>
Message-ID: <8rau2v$78h$1@nnrp2.phx.gblx.net>
Source record: 60885

Greetings to all,

As of October 5 ,2000 www.ab7sl.com will have been on the web for a full year. This is a real milestone in the site's existence. www.ab7sl.com started out this time last year with 0 (zero) visitors and now has almost 16,500 visitors on the counter. The average visitor count per day is now at 55 visitors daily . There are nearly 100 entries in the guestbook now and several dozen user-added links on the Free-for-all-Links Page.

Many features have been added since the basic site went up last year. One of the most popular is The DX Page with the active and clickable DX Cluster Telnet links. I have received a lot of positive feedback on that. Another recent feature is the addition of the AB7SL Monthly DX Online Logbook. This page receives several updates - each day - depending on my activity and band conditions. It lists chronologically all the DX stations I have worked for the current month.

The most recently added page is the 3D-Art Gallery which showcases 3D art I have created with Bryce 3D graphics application. Besides the thumbnail for each image there are two popular resolutions available for download that can be used as desktop wallpaper.

www.ab7sl.com has grown tremendously over it's first year and I look forward to sustained and increased growth over the years to come. Thank you all for making www.ab7sl.com a great success for me and all it's users.

73 / DX

2535. Nixie Tube reconditioning possible? Expert opinions wanted.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-02 00:00:00 UTC
From: afranzman@aol.compute.com
Message-ID: <20001002180543.29845.00000008@ng-md1.aol.com>
Source record: 60888

I have recently acquired some very rare Nixie neon numeric digital display tubes, Burroughs number B-7032. They are about 5.5 inches (140mm) tall overall with a 14-pin bakelite base 2.25 inches (57mm) diameter, displaying digits 2 inches (50mm) tall. Unfortunately they are rather blackened (though still functional) from either long use or excessive current.

I got an idea that sand or similar abrasive introduced into the tube may be used to clean the blackened glass (long story -- see below.) Several technical questions remain, some of which may need to be answered experimentally:

1. Would it be possible to use a torch to open a hole in the Nixie tube envelope without cracking it or damaging the internal elements or the bakelite base?

2. Would opening the envelope to the atmosphere harm the internal workings of the tube due to oxidation, etc?

3. Would there be any harm in leaving sand inside the tube when it is sealed up again?

4. Is the gas inside a Nixie similar enough (pure neon, or some kind of a mixtue?) to that used in neon signs that its function would not be altered?

5. How critical is the gas pressure to the Nixie's proper operation, and could a neon sign shop achieve the correct pressure? What exactly is the pressure inside a Nixie tube anyway?

TIA for any input you have.

The long story of how I got the idea:

Recently I toured a museum in the Los Angeles/Hollywood area -- not sure which one it was now, perhaps the Hollywood Entertainment Museum, or the Museum of Radio and Television -- where they had on display a very old piece of film or television studio equipment, a lightbulb cleaning machine. It is a large spidery looking machine which operated somewhat like an amusement park ride, having several arms which spun around in various directions. The ends of the arms held old high-powered studio incandescent lightbulbs, 500 or 1000 watts as I recall, with large spherical glass about 8 or 12 inches in diameter. These bulbs tended to blacken quite quickly when in use, so they were made with a small quantity of sand inside. At the end of each days work, the bulbs would be placed into this contraption and spun around slowly in all directions overnight and the sand would clean the black deposits from inside the glass, leaving the bulb looking shiny new again for the next day's shooting!

Recalling this gave me the idea that a similar process could be used to "un-blacken" the insides of my Nixies.

If you wish to respond to me directly, see below for email de-crippling clue.

Alan "A.J." Franzman

My real e-mail address does not compute.

I offer for sale a National NC-183T (single conversion) HF communications receiver. Radio is in good condition overall, especially face and knobs and is complete and original. Works good, but could use cleaning and alignment. Ships with a brand new W7FG manual... Just too many projects these days... $200.00 plus half shipping or pickup in Northwest Oregon...

Thanks,

Pat, AA7FG...

2541. Bendix "Micro Match".

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-02 03:47:34 UTC
From: Terry Sanford <tsanford@roadrunner.nf.net>
Message-ID: <39D80556.260057EA@roadrunner.nf.net>
Source record: 60855

Have a Bendix Corporation: Microwave devices Inc., Subsidiary,
Farmington Connecticut "Micro match". (Damaged but repairable I think).
It is a small blue box, three (3) inches wide, five (5) inches high and
2.75 inches deep. has 'N' connectors for cables to transmitter and load.
A six (6) position switch on front is marked "Forward 30, 75, 300" and
"Reflected 300, 75, 30" (perhaps these are watts but no unit is given?).

The meter movement which occupies the top half of the front panel is in
place but has lost its front cover and dial but meter movement itself
appears to be intact!
There is a quarter inch jack on the side marked "Remote Indicator Jack".

The overall colour is blue with silver lettering.
Have tried browsing for Bendix and Microwave Device sites for info but
item/product not listed.
My guess is that it is a SWR meter for VHF frequencies (maybe up to 450
megs?). The Model Number (the front plate is scratched in that area, is
either "70N" or perhaps "7UN".
The 'N' connectors out of each side appear to be fixed; i.e. not
interchangeable as with the Bird meters I have seen.
Anyone got any suggestions about info on this, especially meter movement
details and dial markings?
Suggestions/comments welcomed please.
Terry S.

Please see pictures at:
http://home.att.net/~kdlevstik/ham/r599.jpg

The receiver is 100% solid-state.
Bands are 160/80/40/20/15/10 meters. Also receives 10Mhz WWV and the
30 Meter ham band at 10.1-10.15Mhz.

Comes stock with 500Hz/2.5Khz/5Khz/25Khz filters, selectable in any mode.
Modes are: AM/FM/USB/LSB/CW.

Electrical condition is perfect. Cosmetically very good with small
dent in chrome on front left side. Small hole in cover-plate where
optional six meter antenna goes (easily replaced). Radio doesn't have the
optional converters. Does come with brand new R599A/D service manual.

Partial trade possibility:
If you happen to have a 1.8Khz filter for the TS-520 (3.395Mhz if)
and would like to trade, I will take another $50.00 off the price of
the R599. I will also consider the same trade for an SP-520 external
speaker.

Terms: USA sale only. Certified check/money order for $200.00 or
$150.00 + 1.8Khz filter or SP-520. Will Ship UPS/Insured. I pay shipping!
Will ship as soon as payment is received. (I am located in Texas)

Reason for selling: I just bought a Kenwood TS-520/VFO-520 so now I
no longer need the R599 :(

This is a great receiver and can be the basis for an excellent HF
station. You will not be disappointed!

Note:
Please e-mail me directly. Thanks, and take care!

Nice small amp to boost the early ICOM-706's up, or any rig with 5-15 watts out. 10 in gives you 40W, 15 gives you 50W. I used it on my original 706.

2548. Nixie Tube reconditioning possible? Expert opinions wanted.

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-03 00:00:00 UTC
From: afranzman@aol.compute.com
Message-ID: <20001002212204.18640.00000109@ng-cg1.aol.com>
Source record: 60766

I have recently acquired some very rare Nixie neon numeric digital display tubes, Burroughs number B-7032. They are about 5.5 inches (140mm) tall overall with a 14-pin bakelite base 2.25 inches (57mm) diameter, displaying digits 2 inches (50mm) tall. Unfortunately they are rather blackened (though still functional) from either long use or excessive current.

I got an idea that sand or similar abrasive introduced into the tube may be used to clean the blackened glass (long story -- see below.) Several technical questions remain, some of which may need to be answered experimentally:

1. Would it be possible to use a torch to open a hole in the Nixie tube envelope without cracking it or damaging the internal elements or the bakelite base?

2. Would opening the envelope to the atmosphere harm the internal workings of the tube due to oxidation, etc?

3. Would there be any harm in leaving sand inside the tube when it is sealed up again?

4. Is the gas inside a Nixie similar enough (pure neon, or some kind of a mixtue?) to that used in neon signs that its function would not be altered?

5. How critical is the gas pressure to the Nixie's proper operation, and could a neon sign shop achieve the correct pressure? What exactly is the pressure inside a Nixie tube anyway?

TIA for any input you have.

The long story of how I got the idea:

Recently I toured a museum in the Los Angeles/Hollywood area -- not sure which one it was now, perhaps the Hollywood Entertainment Museum, or the Museum of Radio and Television -- where they had on display a very old piece of film or television studio equipment, a lightbulb cleaning machine. It is a large spidery looking machine which operated somewhat like an amusement park ride, having several arms which spun around in various directions. The ends of the arms held old high-powered studio incandescent lightbulbs, 500 or 1000 watts as I recall, with large spherical glass about 8 or 12 inches in diameter. These bulbs tended to blacken quite quickly when in use, so they were made with a small quantity of sand inside. At the end of each days work, the bulbs would be placed into this contraption and spun around slowly in all directions overnight and the sand would clean the black deposits from inside the glass, leaving the bulb looking shiny new again for the next day's shooting!

Recalling this gave me the idea that a similar process could be used to "un-blacken" the insides of my Nixies.

If you wish to respond to me directly, see below for email de-crippling clue.

Alan "A.J." Franzman

My real e-mail address does not compute.

2549. Telefunken E148 - 149/2 VHF receiver

Subject: Antenna evaluations appreciated

I'm contemplating installing a Trident DX or HyGain Pioneer no-radial
vertical in my new QTH. I just can't do the climbing for beam
adjustments or
have the room for radials or a dipole. I would appreciate any comments
on

this type of antenna before I commit scarce funds.
Thanks in advance.

Subject: FA: on eBay Allied Radio / Knight Kit / Lincoln dual headphones

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=3D441461280

General purpose headphones suitable for shortwave and Amateur
monitoring.=20
Vinyl covered double headband with easily adjustable yokes for comfort.=20
Powerful Hyflux Alnico magnets. 1 7/8" diaphram. 4 1/2 foot cords with
PHONE PLUG. That's how the Allied Radio catalog described this headset.
This headset is in very good condition. Please note that the impedance
of
this headset is 11 ohms, not 2000 ohms. The previous owner put 11 ohms
on
the headset as you can see in the picture. I verified this in my Allied
Radio catalog, and they did offer both impedances.This headset is just
the
thing to complement your Knight Kit Star Roamer, R-55, or R100 receiver.
Would also work well with the Hallicrafters and HeathKit lines.The
headset
is in very good condition and they work well. I guarantee that they
will
not be DOA, but as with any electronic item that's over 30 years old,
I'm
auctioning them off as is.

From: K6SDE
Subject: FS: Kenwood TM-241A (2 Meters)

This 2 meter transceiver is in very fine condition, the microphone
somewhat less so. It has the extra cost DTSS (DTU-2) installed.

I am asking $145 + shipping and insurance which is $10 less than the
eBay average price for recent sales.

If you're interested take a look at what I will post on eBay mid week if
I don't sell it first:
http://www.geocities.com/k6sde/241/241A.html

Subject: FS: Misc ham items

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $15 plus postage for the pair.

Connectix - QuickCam VC camera for your computer
This is the Parallel Port Version, excellent condition, original box, software and manual. Requires Windows 95.
$30 shipped.

Knight Model KG-687 Sweep / Marker Generator, very good condition but missing the handle on the top. Still has the plastic over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's manual, power cable and "six" brand new ribbons. This takes the small ribbons like the Okidata type printers.
$30 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual, power cable and 2 new ribbons.
$25 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew and has plastic spacers installed. Bare copper wire. You need to see the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N=D8SAH

From: "Nico van Dongen"
Subject: FS: WWII German army CW key and a British Air Ministry Morse

I have for sale a WWII German army CW key and a British Air Ministry
Morse
key.

The Germany key is a type T1SBF and it has the German eagle stamped in
the
base plate.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox
Identification. It was used on the Spitfire but also on other planes of
the
day. It was used to key the Navigation and/or Landing lights for
identification purposes, when radio communication was not available or
not
allowed. The key is made of Bakelite, round, 3.5" in diameter and 1"
thick.
The key protrudes out of the front just below two lever switches marked
Downward and Upward respectively. The switches have three positions:
Morse,
Off and Steady.

Both key's are in good condition and I have pictures of them I can Email

Should you be interested, I'm asking 75$ per key. Shipping from Holland
Will be 20$ when sent together or 15$ per key when sent separate.

wrote:

Seeing this item brought back an indelible image from my youth - I started in the 50's as a very young SWL in Merchantville, NJ and there was a old ham - this fellow was ancient, with a 2 letter call -- special in those days, but a great guy whose 80m AM signal smothered our town -- it made the rain gutters buzz on a damp day. I called him up and he invited me over to his shack -- and it was just that -- a converted garage in his back yard, with ladder feed to a full-wave dipole a zillion miles in the sky -- looked like Jack and th beanstalk arrangement. His place was heated by a pot-bellied stove and the enormous amount of electricity consumed by his homebuilt rig, including a final amplifier in two huge floor racks that defied imagination and, I suspect, the legal limit. It had a bank of rectifier tubes that made the interior glow a deep and humming blue when he hit the mike key. It was awesome -- a very much 'Back to the Future" quality. He had a deep, raspy voice, and I soon understood why. A constant chain smoker, this fellow never bothered to stub out his cigarettes, but rather threw them into a pile surrounding that pot bellied stove, which sat on a metal slab maybe 8'x8'. There was a mountain of butts -- I don't mean just a few, at least 10-15 years accumulation -- and everything in there, including the operator, the panes of glass, the paint -- were covered by a yellow pall of unfiltered Pall Mall smoke. It was quaint at the time, but I would return home smelling like I bathed in nicotine. The original poster to this thread must have come into possession this fellow's equipment.

No, the front panel is too far gone to read the lables. It was
rackmount
however, the previous owner put it in a particle board chassis, which
will be
the first thing to go. I'll have to check out this site.

From: afranzman@aol.compute.com (A.J. Franzman)
Subject: Nixie Tube reconditioning possible? Expert opinions wanted.

I have recently acquired some very rare Nixie neon numeric digital
display
tubes, Burroughs number B-7032. They are about 5.5 inches (140mm) tall
overall
with a 14-pin bakelite base 2.25 inches (57mm) diameter, displaying
digits 2
inches (50mm) tall. Unfortunately they are rather blackened (though
still
functional) from either long use or excessive current.

I got an idea that sand or similar abrasive introduced into the tube may
be
used to clean the blackened glass (long story -- see below.) Several
technical questions remain, some of which may need to be answered
experimentally:

1. Would it be possible to use a torch to open a hole in the Nixie tube
envelope without cracking it or damaging the internal elements or the
bakelite
base?

2. Would opening the envelope to the atmosphere harm the internal workings of
the tube due to oxidation, etc?

3. Would there be any harm in leaving sand inside the tube when it is sealed
up again?

4. Is the gas inside a Nixie similar enough (pure neon, or some kind of a
mixtue?) to that used in neon signs that its function would not be altered?

5. How critical is the gas pressure to the Nixie's proper operation, and could
a neon sign shop achieve the correct pressure? What exactly is the pressure
inside a Nixie tube anyway?

TIA for any input you have.

The long story of how I got the idea:

Recently I toured a museum in the Los Angeles/Hollywood area -- not sure which
one it was now, perhaps the Hollywood Entertainment Museum, or the Museum of
Radio and Television -- where they had on display a very old piece of film or
television studio equipment, a lightbulb cleaning machine. It is a large
spidery looking machine which operated somewhat like an amusement park ride,
having several arms which spun around in various directions. The ends of the
arms held old high-powered studio incandescent lightbulbs, 500 or 1000 watts as
I recall, with large spherical glass about 8 or 12 inches in diameter. These
bulbs tended to blacken quite quickly when in use, so they were made with a
small quantity of sand inside. At the end of each days work, the bulbs would
be placed into this contraption and spun around slowly in all directions
overnight and the sand would clean the black deposits from inside the glass,
leaving the bulb looking shiny new again for the next day's shooting!

Recalling this gave me the idea that a similar process could be used to
"un-blacken" the insides of my Nixies.

If you wish to respond to me directly, see below for email de-crippling clue.

> davidg@asheville.com

The R-366/TRR-5 receiver was a Marine Corps contract for a troop
entertainment and "auxiliary" communications receiver and was built in
the early 50's.
The audio amplifier in it is rated 10W, it uses 2 6AQ5 tubes in push-
pull. Originally the radio was supplied with a carrying case which
contained a high-quality 12" speaker.
Besides having high-powered, good quality audio, the receiver makes a
fairly decent communications receiver.

Documentation is generally available through the regular surplus manual
vendors.

Enjoy your receiver.

Good luck,

Meir WF2U

From: "Charles"
Subject: www.ab7sl.com - 1 YEAR OLD !!

Greetings to all,

As of October 5 ,2000 www.ab7sl.com will have been on the web for a
full year. This is a real milestone in the site's existence.
www.ab7sl.com
started out this time last year with 0 (zero) visitors and now has almost
16,500 visitors on the counter. The average visitor count per day is now at 55
visitors daily . There are nearly 100 entries in the guestbook now and several
dozen user-added links on the Free-for-all-Links Page.

Many features have been added since the basic site went up last year. One
of the most popular is The DX Page with the active and clickable DX Cluster

Telnet links. I have received a lot of positive feedback on that.
Another
recent feature is the addition of the AB7SL Monthly DX Online Logbook.
This
page receives several updates - each day - depending on my activity and
band
conditions. It lists chronologically all the DX stations I have worked
for the
current month.

The most recently added page is the 3D-Art Gallery which showcases
3D art I
have created with Bryce 3D graphics application. Besides the thumbnail
for each
image there are two popular resolutions available for download that can
be used
as desktop wallpaper.

www.ab7sl.com has grown tremendously over it's first year and I
look
forward to sustained and increased growth over the years to come.
Thank you
all for making www.ab7sl.com a great success for me and all it's
users.

73 / DX

I'll look up the tube lineup in my manual and will let you know.
Out of memory, the final is a 6146 and the modulators are a pair of
807's in P-P.

I have a G-222 also and it's a nice little transmitter for CW and AM -
I use it often with its matching G4/214 receiver.

Good luck and enjoy it.

2559. Wtd: Collins PTO which can output 1.8 - 2.0 mHZ

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-03 00:00:00 UTC
From: Doug_Hensley@GENERALHEALTH.ORG
Message-ID: <0003EF58.C22279@GENERALHEALTH.ORG>
Source record: 60777

Looking for a Collins PTO which can be used as a VFO for 160 meters. Prefer something which has the output spread of 500 khz as the R388's do. So if anyone has a clean R388 PTO, please get in touch.

TIA for any assistance,

D.H.

2560. FS: Motorola MaxTrac UHF set

2563. Economical shipping of boatanchors from UK to US?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-03 00:00:00 UTC
From: Roger Basford <Basford@btinternet.com>
Message-ID: <8rde5b$2bt$1@uranium.btinternet.com>
Source record: 60781

Hi,

I have a boatanchor RX that has been purchased by a collector in the US, who has asked me to enquire about the cost of shipping. I have tried all the usual folks like UPS and Parcel Force but their prices are approaching the value of the RX, even for sea shipment. If anyone has any info on shipping boatanchors, like a shipper they'd recommend, I'd be grateful. The RX is crated to what I'm told is US specs, i.e. new materials only used to build the crate.

Regards,

Roger Basford

2564. Re: Tubes For Sale

2565. Speaker Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-03 00:00:00 UTC
From: mccrk@aol.com
Message-ID: <20001003164435.03156.00000094@ng-fh1.aol.com>
Source record: 60783

Anybody got a Hallicrafters R-42, R-44 or PM-23 speaker he's willing to part with? It must be in good working and cosmetic condition. I'd pay a reasonable amount of cash, or I'd be delighted to swap an R-46B for it. My R-46B has the original paint job and the cabinet looks almost new. I've replaced the original speaker, which is actually still in fine condition, but I have it and it'll be included in the trade.

Steve, W3DEF

Have a 90651 grid dip meter, beautiful condition, all seven coils, plastic carrying case, and copy of instruction manual. Also have 90672 antenna bridge, beautiful condition, all three pickup coils, and copy of instruction manual. Sold as a pair for $150 shipped UPS, continental US only. Several circumstances suggest that I reduce items from the ham shack. Thanks for reading the post.

73s,

Evan

On Sun, 24 Sep 2000 17:00:16 -0600, "Jack Taylor" <n7oo@theriver.com>
wrote:

Seeing this item brought back an indelible image from my youth - I
started in the 50's as a very young SWL in Merchantville, NJ and there
was a old ham - this fellow was ancient, with a 2 letter call --
special in those days, but a great guy whose 80m AM signal smothered
our town -- it made the rain gutters buzz on a damp day. I called him
up and he invited me over to his shack -- and it was just that -- a
converted garage in his back yard, with ladder feed to a full-wave
dipole a zillion miles in the sky -- looked like Jack and th beanstalk
arrangement. His place was heated by a pot-bellied stove and the
enormous amount of electricity consumed by his homebuilt rig,
including a final amplifier in two huge floor racks that defied
imagination and, I suspect, the legal limit. It had a bank of
rectifier tubes that made the interior glow a deep and humming blue
when he hit the mike key. It was awesome -- a very much 'Back to the
Future" quality. He had a deep, raspy voice, and I soon understood
why. A constant chain smoker, this fellow never bothered to stub out
his cigarettes, but rather threw them into a pile surrounding that pot
bellied stove, which sat on a metal slab maybe 8'x8'. There was a
mountain of butts -- I don't mean just a few, at least 10-15 years
accumulation -- and everything in there, including the operator, the
panes of glass, the paint -- were covered by a yellow pall of
unfiltered Pall Mall smoke. It was quaint at the time, but I would
return home smelling like I bathed in nicotine. The original poster
to this thread must have come into possession this fellow's equipment.

2589. Amp Supply LK-550 For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-10-04 00:00:00 UTC
From: GaryH <garyhendricks@hotmail.com>
Message-ID: <xODC5.7110$bg6.40696@news3.atl>
Source record: 60706

Due to the fact that we have moved into a place that will not
Allow me to use my amp, I am putting it up for sale.

I have a quite rare Amp Supply LK-550 manual tune amp.
It is a brute of an amp using three 3-500Z tubes and is
Conservatively rated at full legal output. It is rated at
100% duty cycle at full power. The power transformer
is in its own box with a fan and is a Peter Dahl 1.75 amp
CCS Hypersil.

It is in very good condition with only a few small chips
in the paint on the cover and a perfect front panel. The
Power transformer box has a couple of scratches that
Were there when I purchased it but since it stays out
Of sight under the table I was never concerned about
Them. I have a manual and all schematics.

Pictures are available at:
http://www.geocities.com/Broadway/5465/LK-550.htm

The amp is quite heavy (70 pounds for xformer and
about 40 for RF deck).

I am asking $1300.00 and buyer pays shipping. Pick
up would be better if possible.

Subject: Economical shipping of boatanchors from UK to US?

Hi,

I have a boatanchor RX that has been purchased by a collector in the US, who
has asked me to enquire about the cost of shipping. I have tried all the usual folks like UPS and Parcel Force but their prices are approaching the
value of the RX, even for sea shipment. If anyone has any info on shipping
boatanchors, like a shipper they'd recommend, I'd be grateful. The RX is crated to what I'm told is US specs, i.e. new materials only used to build
the crate.

Regards,

Roger Basford

I'll look up the tube lineup in my manual and will let you know.
Out of memory, the final is a 6146 and the modulators are a pair of
807's in P-P.

I have a G-222 also and it's a nice little transmitter for CW and AM -
I use it often with its matching G4/214 receiver.

Good luck and enjoy it.

From: mccrk@aol.com (MCCRK)
Subject: Speaker Needed

Anybody got a Hallicrafters R-42, R-44 or PM-23 speaker he's willing to
part
with? It must be in good working and cosmetic condition. I'd pay a
reasonable
amount of cash, or I'd be delighted to swap an R-46B for it. My R-46B
has the
original paint job and the cabinet looks almost new. I've replaced the
original
speaker, which is actually still in fine condition, but I have it and
it'll be
included in the trade.

I have not tried or even seen reviews on the 2 specific antennas that
you mention. But I know just enough about antenna theory to be
dangerous so I am going to throw out a few thoughts for your
consideration.

1. Get an ARRL antenna handbook and read the sections of it that are
pertinent to the type of operation you do. This one simple action will
go a long way to help you understand why your signal is what it is on
the air.

2. When I talk to other hams, their vertical antennas often do not live
up to their expectations. Verticals seem more suceptible to vagaries of
poor local terrain than wire or beam antennas (which can be raised
above the terrain where the vertical almost always has to be mounted on
the ground).

3. Radials are the "other half" of a vertical antenna. A poor radial
installation lowers antenna resistance and therefore efficiency. Many
watts into the antenna yields just a few radiated watts. A " no-radial"
vertical must be bending the rules and paying the price, I think.

4. My guess is that "no-radial" verticals use some form of a
counterpoise to capacitively couple to the ground. How well this
actually works, I can't say. But it flies in the face of the lttle
theory that I know and I am suspicious.

Caveat emptor. If I was you, I would go carefully before actually
spending any money.
Good luck.
73, Don Merz, N3RHT

Greetings

Before a recent computer crash, I used to have the web site for military radios that listed every radio by Mil Number. Just click on the number and it would show you pictures, and in some cases, even schematics. Can anyone point me in the right direction ?

Also, is there somewhere one could purchase manuals for the PRC-25 and the PRC-77

Regards
Reed

Misc for Sale: I have pictures I can send by email if you like.

1989 International Callbook
1989 United States Callbook
both in excellent condition, $15 plus postage for the pair.

Knight Model KG-687 Sweep / Marker Generator, very good
condition but missing the handle on the top. Still has the plastic
over the front dials.
$30 plus shipping.

Panasonic KX-P1124 printer, excellent condition with owner's
manual, power cable and "six" brand new ribbons. This takes the
small ribbons like the Okidata type printers.
$30 plus shipping.

IBM Proprinter II printer, very good condition, with owner's manual,
power cable and 2 new ribbons.
$25 plus shipping.

Approximately 30 foot roll of "real" ladder line. This is not homebrew
and has plastic spacers installed. Bare copper wire. You need to see
the picture on this one.
Make offer.

Military style phone plugs with the numeration:

ADC PJ051R M642 / 2 - 2 one each
KINGS PJ-055B one each
KINGS PJ-054R one each
JK-26 one each - this one is the
matching in-line jack
for the PJ-054R
Make offer on all, please.

Again, I have pictures I can send to interested parties.
Thanks, Randy N&#65533;SAH

2630. FS: Motorola Mitrek low band, 4 ch, 110 watt

Newsgroup: rec.radio.amateur.boatanchors

Hello!
Our Fire Department has recently had a low band Motorola Mitrek donated to us so that we could sell it and raise a little money for the department.
The radio is a 4 channel, 110 watt, 39-50 MHz, with an extender (noise blanker) and is set up for tone squelch.
The info on the data plate is:
FCC Xmtr Data: CC1155
FCC Rcvr Data: RC0214
Model #: T81JJA4900DK
Ser #: 433HJY1476

If you would like to see a few pictures of this radio and accessories, please visit:
http://www.haworthfire.com/mitrek.html

If you have any questions, please feel free to contact me by e-mail or phone (# on website).

Thanks for your interest!
Kirk

Whats the website where you can download shematics of old gear? I remember one with the word "Bama" in it.

Thanks

k9ssb@arrl.net

Thanks for the info......I'll try to be early...but not so early to join
the flashlight brigade.
73,
Henry WA7YBS

Boat Anchor Manual Archive
http://bama.sbc.edu/

It gets pretty busy some times and won't let you on, but
it is a good site. You can also get there via anonymous FTP.
